WASHINGTON GOVERNMENT PRINTING OFFICE 1924

EXPERIMENT STATION RECORD

Editor: H. L. KNIGHT

EDITORIAL DEPARTMENTS

Agricultural and Biological Chemistry—Sybil L. Smith.

Meteorology—W. H. Beal.

Soils and Fertilizers—R. W. Trullinger.

Agricultural Botany and Diseases of Plants—W. H. Evans, Ph. D., W. E. Boyd.

Genetics—H. M. Steece, J. W. Wellington, G. Haines.

Field Crops—H. M. Steece.

Horticulture and Forestry—J. W. Wellington.

Economic Zoology and Entomology—W. A. Hooker, D. V. M.

Animal Husbandry, Dairying, and Dairy Farming—G. Haines.

Veterinary Medicine—W. A. Hooker.

Agricultural Engineering—R. W. Trullinger.

Rural Economics and Sociology, Agricultural and Home Economics Education—

Louise Marbut.

Foods and Human Nutrition—Sybil L. Smith.

Textiles and Clothing—H. M. Steece, Sybil L. Smith.

Home Management and Equipment—Louise Marbut, R. W. Trullinger.

Indexes—Martha C. Gundlach.

Bibliographies—Anna Howard.

THE AGRICULTURAL EXPERIMENT STATIONS

ALABAMA-College Station: Auburn; M. J. Funchess. Canebrake Station: Uniontown; W. A. Cam-Tuskegee Station: Tuskegee Institute; G. W. Carver.

Alaska—Stika C. C. Georgeson.

ARIZONA—Tucson: J. J. Thornber.

ARIZONA—Tucson: J. J. Thornber.

ARIZONA—Berkeley: E. D. Morrill.

COLORADO—Fort Collins: C. P. Gillette.

COLORADO—Fort Collins: C. P. Gillette. CONNECTICUT State Station: New Haven; W. L. Slate, jr. Storrs Station: Storrs; W. L. Slate, jr. 1 DELAWARE-Newark: C. A. McCt FLORIDA-Gainesville: W. Newell. McCue.1 GRORGIA Experiment: H. P. Stuckey.¹
Tifion: Coastal Plain Station; S. H. Starr.¹
GUAM—Island of Guam: C. W. Edwards.¹ HAWAII-Federal Station: Honolulu; J. M. Westgate ¹ Sugar Planters' Station: Honolulu; H. P. Agee. ¹ IDAHO—Moscow: E. J. Iddings.¹

MISSISSIPPI-A. and M. College: J. R. Ricks.1

² On leave.

Superintendent.

Coffey.

EDITORIAL NOTES

VOLUME 26

The Columbus meetings
The Columbus meetings. The affiliation of societies for agricultural science
The ethical side of experiment station practice
The provision of agricultural teachers.
The decline of the station annual report.
Dr. John B. Smith, deceased.
The occupation of the agricultural college graduate.
Agricultural extension at the Southern Commercial Congress.
The organization and administration of extension work
Volume 27
The need for research in home economics
Fifth session of the Graduate School of Agriculture1
The agricultural appropriation act of 1912-13
Dr. M. A. Scovell, deceased
The anniversary of agricultural education
The influence of the land-grant colleges on higher education6
The semicentennial of the National Department of Agriculture
The quarter centennial of the experiment station system
VOLUMN 28
A closer union of agricultural libraries
Practical experience as a part of the agricultural course
The agricultural appropriation act, 1913-14.
The retirement of Secretary Wilson.
The coordination of State agricultural institutions
The agricultural engineer and some of his opportunities.
Increasing interest in agricultural meteorology.
Opportunity for study of the meteorological conditions of plant environ-
ment
Volume 29
Fourth session of the General Assembly of the International Institute of
Agriculture
The Tenth International Congress of Agriculture.
The quarter centennial of Prof. Thorne's directorship
Fiftieth anniversary of the American Veterinary Medical Association 3
The administrative management of the modern station 4
The moral of 25 years
The essentials of research
Convention of Association of Agricultural Colleges and Experiment
Stations6 Closer relations between the Department of Agriculture and experiment
Closer relations between the Department of Agriculture and experiment stations
Research, experiment, and demonstration
The essentials of research
Lines of demarcation between experiment and demonstration
Anti-turner and substantial and seek and and an annual seek and an action of the substantial and property of the second of the s

VOLUME 30

I
The letters and writings of Dr. S. W. Johnson
Rediscovered ideals for agricultural investigation.
Progress of studies in animal nutrition
Requirements of feeding experiments
Need of redirection of experimental work in animal husbandry
The "Village Moderne" at the Ghent Exposition.
The opportunity of the agricultural collega for civic betterment
Journal literature of agricultural science
The essentials of a scientific paper
Functions of criticism in agricultural science
The agricultural extension act
State and National cooperation in agricultural extension
The Louisville conference on country-life development
Rural sanitation—an opportunity for extension work
Volume 31
The agricultural appropriation act, 1914-15
Formation of the American Association of Agricultural College Editors
Sixth session of the Graduate School of Agriculture
The United States and Canadian commissions on vocational training and
some of their conclusions as to agricultural education
An agency for the publication of agricultural research
The organization of a section for agriculture in the American Association.
Plant physiology in agricultural courses
Study of the life of the plant in field experiments
Volume 32
The Washington convention
Some effects of extension development
Renewed importance of agricultural research
The new Section of Agriculture in the American Association
Some aspects of the field of rural economics.
The habit of concentration
The qualities and conditions of research
A plea for the small laboratory
The agricultural appropriation act, 1915-16
A notable contribution to station literature
The need of constructive ideals in research
Economic aspects of experiment station work
Experimental inquiry and economic inquiry
Relation of the experiment stations to studies in rural economics
VOLUME 33
Establishment of the States Relations Service
Review of the Office of Experiment Stations.
Progress in the organization of agricultural extension work under the
Smith-Lever Act
Some administrative problems being encountered
The Berkeley convention of the Association of American Agricultural
Colleges and Experiment Stations
The preparation of men for teaching and research in agriculture
The effective correlation of station and extension work

EDITORIAL NOTES

Some other problems before the association
Some problems in publishing experiment station work
The practice of outside publication.
The need of a systematic procedure.
The element of chance in agricultural experimentation and investigation.
Fourth Convention of the International Association of Dairy and Milk
Inspectors
VOLUME 34
Seventeenth Annual Convention of the Association of Southern Agricul-
tural Workers.
The more effective coordination of experiment station work
Dedication of memorial to Col. W. H. Hatch
Experience v. investigation in agriculture
The basis for agricultural extension and demonstration
Interpretation of experiment station work through extension
Dr. E. W. Hilgard, deceased
Agriculture at the Second Pan American Congress
Science and common sense
The growth of the science spirit
Establishment of a Division of Agricultural Meteorology in the United States Weather Bureau
Recent progress in agricultural meteorology
The experiment station as a field for the research worker
. Volume 35
Impressions of the stations in the Southwest
Rural credits legislation in its relation to the agricultural colleges and
experiment stations
The Federal farm loan act
The agricultural appropriation act, 1913-17
Seventh Graduate School of Agriculture
Agriculture and the war in Europe
Effect of the war on agricultural institutions
The Washington Convention of the Association of American Agricultural
Colleges and Experiment Stations.
VOLUME 36
The New York meeting of the American Association for the Advancement
of Science.
The adjustment of science to practice
Qualities and organization of research and experiment
Coordination in scientific effort
The training of investigators
Graduate students as research assistants
Physics in agricultural investigation
A decade under the Adams Act
The agricultural appropriation act, 1917-18
The experiment stations and the war
The coordination of science and practice in agriculture
The Federal Aid Vocational Education Act

Volume 37
The response of the experiment stations to the present emergency
The adjustment of theory and practice to war conditions
Adequate station administration
Some tendencies under deficient administration
The Federal food production act
Research and the research worker in relation to national affairs.
The development of American technical agricultural journals
The thirty-first annual convention of the Association of American Agricul-
tural Colleges and Experiment Stations
Attendance at the agricultural colleges as affected by the war
.1000HQBHOO BU THE BETTORIVERED COLORED BD BETTORIOG DJ VIIO WHILLIAM
Volume 38
The opportunity for individual service
Helping to win the war
Closer relation of station and extension forces
An agricultural program
The regulation of agriculture abroad
"Speeding up" food production in England
Report of the commission on the investigation of agricultural education in
Massachusetts
Agriculture under reconstruction
The place of the experiment stations in a reconstruction program
A decade of development of the insular experiment stations
Proposed station work in the Virgin Islands
The first decade of the International Institute of Agriculture
Volume 39
The development of agricultural research in Australia
Scientific activity as a national asset
Responsibility for the development of science
The agricultural appropriation act, 1918–19
Reconstruction measures in Great Britain
The outlining of an agricultural policy
A new attitude toward cooperation and coordination
The organization of science for research.
The thirty-second annual convention of the Association of American Agri-
cultural Colleges and Experiment Stations.
-
Volume 40
The present position and outlook of the stations
Some effects of association
The need for safeguarding agricultural investigation
The Rothamsted Station in war time
Suggestions for agricultural education and research in Victoria
Birmingham meeting of the Southern Agricultural Workers
Abstract journals after the war
The return of station workers from war service
The influence of the war on station work in the future
The organization of agricultural research work in India
Science and prophecy
Elements of progress in research.
Long-continued projects

new, (28) 533; (39) 337.
                                                                                                                                                                                                                                                                                   tree, culture experiments, (36) 340.
Algic acids, studies, (40) 804.
```

Algin, composition, (33) 108.	Alkali-Continued.
Algin, description, (29) 566. Algocyan, notes, (36) 202.	soils— gypsum for, (40) 51.
Alimentary intoxications—	improvement, (26) 223, 224; (28) 32, 814; (31)
notes, (34) 575. of horses, (26) 887.	317; (33) 416. irrigation, (33) 419.
Aliphatic acids, saturated, cleavage, (31) 465.	methods of analysis, (32) 296.
Alisma plantago seeds, delayed germination ir, (31) 824.	of Egypt, (30) 21. India, (28) 736.
Alizarin oil, insecticidal value, (34) 359.	India, (28) 736. Iowa, studies, (39) 720, 813.
Alkali— accumulation, relation to irrigation, (33) 419.	Nevada, analyses, (31) 215. Niger River basin, analyses, (26) 318.
albumin, production of anaphylaxis by, (26) :.	Ohio, (35) 510. San Luis Vulley, (38) 324, 386.
and salt industry, treatise, (36) 428. brush, poison, analyses, (39) 184.	United Provinces in India, (33) 419.
bush ash, analyses, (36) 429.	origin, (37) 809
carbonated and caustic, titration of mixture, (39) 714.	plants tolerant to, (40) 221. reclamation, (26) 590; (31) 889; (32) 36; (33) 88, 324, 392, 419, 421, 430, 814, 815; (35) 516;
carbonates, determination, (26) 406.	88, 324, 392, 419, 421, 430, 814, 815; (35) 516;
content of soils as related to crop growth, (40) 719.	(37) 281; (38) 118, 815. reclamation with Bermuda grass, (29) 330.
crusts of United States, (27) 22.	studies, (27) 321; (28) 319, 515, 516; (36) 118. treatment, (39) 215; (40) 32.
determination in— arsenical dip fluid, (26) 411.	tolerance of—
chlorinated solutions, (39) 506. hypochlorite solutions, (40) 309.	encalypis for, (26) 642. wheat seedlings, studies, (27) 500; (29) 322.
silicates, (30) 11.	water—
soils, (32) 504; (33) 610; (34) 609. distribution by irrigation, (40) 719.	effect on dairy cows, (30) 775. effect on dairy products, (27) 282.
effect on-	notes, (28) 27.
cement, (27) 89; (28) 86; (32) 787; (37) 788. concrete, (32) 381.	notes, (28) 27. still for, (28) 796. Alkalimetry, indicator for, (36) 13.
concrete drain tile, (34) 87.	Alkaline—
creatin elimination, (36) 161. denaturation of proteins, (29) 501.	carbonates, determination, (40) 112. earth metals, separation, (34) 409.
growth of rice, (34) 31.	earth salts, effect on plants, (28) 527. earths, effect on Lupinus albus, (31) 325.
milk, (28) 18. nitric-nitrogen accumulation in soils, (40)	solutions-
722,	dilute, determining alkalinity, (40) 610. effect on invert sugar, (27) 812.
nitrogen-assimilating bacteria, (39) 722. permeability, (34) 429.	toxicity toward plants, (35) 28.
permeability, (34) 429. perovidase, (29) 202. proteins, (38) 803. quality of sugar beets, (28) 43.	Alkalis— destructive action on vitamins, (36) 465.
quality of sugar beets, (28) 43.	determination in rocks, (31) 502.
soil bacteria, (37) 213. specificity of precipitins, (26) 482.	effect on Lupinus albus, (31) 325. effect on malt diastase, (31) 806.
wheat yield, (39) 736.	in Colorado, studies, (39) 323.
formation by enzyms, (30) 111. metal salts, effect on saccharification of starch,	Alkaloid— animal, isolation from milk, (26) 212.
(26) 309.	formation in tobacco, (35) 333.
 origin, (37) 809. production in soils by denitrification, (36) 321. 	Alkaloidal reactions, notes, (27) 208. Alkaloids—
protection of concrete structures from, (29) 386.	biological formation and function, (32) 327.
relation to chlorosis, (28) 623. relation to light precipitation, (27) 816.	cinchona, disinfecting action, (40) 478. detection, (29) 408.
salts— as affected by calcium carbonate, (39) 721.	detection in beverages, (31) 114. detection in water, (34) 410.
combination of chlorin ions in, (33) 623.	distribution in belladonna plant, (31) 201.
determination in soils, (28) 318. salts, effect on—	effect on— germination of seeds, (33) 825.
ammonification, (39) 721.	healthy cattle, (29) 476.
burning quality of tobacco, (39) 34. concrete, (29) 686.	formation in tobacco, (27) 133. identification by optical methods, (39) 415, 506
concrete, (29) 086. crop growth, (36) 118. germination and growth of crops, (34) 125.	in beverages, (31) 358. origin in plants, (27) 228.
growth of rice, (30) 630, 728, 833. nitrification, (38) 322.	plant, synthesis of, (31) 409.
nitrification, (38) 322. plants, (28) 527.	plant, treatise, (29) 503. Senecio, effect on cattle, (27) 79.
soil bacteria, (27) 124; (28) 519, 719.	variation in plant leaves, (30) 44.
alts— in irrigation waters, (39) 792.	Allantoin— assimilation by plants, (26) 32.
soil, antagonistic agents, (39) 619.	determination in urine, (33) 116.
soils, (33) 421. soils of India, (29) 514.	determination in urine, (33) 116. distribution in plants, (30) 129. heat of combustion, (20) 160. occurrence in sugar beets, (28) 810.
studies, (29) 137.	occurrence in sugar beets, (28) 810.
toxicity, soil factors affecting, (40) 315.	output as affected by water ingestion, (27) 168. use against beri-beri, (34) 367.
analyses, (34) 512.	Allergy—
analyses and treatment, (30) 622. as affected by irrigation, (34) 16. bacteriological studies, (26) 646.	notes, (32) 78.
pacteriological studies, (26) 646. black, of San Luis Valley, (38) 324.	parasitic, notes, (38) 689. Alligator pears, see Avocados.
black, of San Luis Valley, (38) 324. drainage, (34) 283; (36) 186, 584; (38) 591.	Alligators as human food, (39) 471.
durability of concrete and draintile in, (39) 86; (40) 386.	Allium— cepa, protein formation in bulbs of, (31) 224.
soils, effect on-	cepa, stomatal movement in, (26) 627.
concrete drainage tile, (34) 584. cotton, (27) 640.	polvánthum, occurrence of arsenic in, (27) 269. sativum, selection experiments, (30) 738; (32)
dry farm crops, (87) 437.	834, winesle eradication (29) 483; (31) 739.

and use in killed plants, (28) 327.	and solutions, (30) 218; (31) 420, as affected by arsenic, (30) 423, 424. as affected by sulphur, (31) 125. mothods of studying, (30) 214. nature, (36) 513; (38) 621. studies, (27) 517; (29) 21; (34) 127, 619. inhibition by affects
by mold fungi, (28) 803.	as affected by arsenic, (30) 423, 424.
from cyanamid, (38) 516.	as affected by sulphur, (31) 125.
in higher plants, (28) 328.	methods of studying, (36) 214.
in soil as affected by salts, (39) 218.	nature, (36) 513; (38) 621.
in soils, (27) 721.	studies, (27) 517; (29) 21; (34) 127, 619.
organic nitrogen in, (32) 818.	inhibition by alkali salts, (28) 719.
from aluminum nitrid, (32) 125.	of green manures, (33) 514.
gas as a funtigant, (31) 256.	relation to availability of nitrogenous mate-
gas, effect on animals, (26) 373.	relation to availability of nitrogenous materials, (26) 124.
in canned sardines, (40) 411.	relation to osmotic pressure, (39) 323.
dew, (37) 116.	relation to temperature, (31) 127.
diseased plants, (37) 549.	seasonal variation, (32) 514.
peats and humus soils, (36) 612.	studies, (28) 718, 719; (39) 324.
rain and snow of South Polar region, (26) 515.	studies with soil fungi, (32) 817.
rainwater, (40) 809.	Ammonium—
soil as affected by heat, (39) 617.	acetate, effect on milk production and quality,
stomach and intestines on vegetable diet, (36)	(26) 476.
664.	bicarbonate, fertilizing value, (35) 325, 518.
loss from manured soils, (31) 421.	carbonate—
loss from soils, (27) 21. manufacture, (28) 424, 723; (30) 427, 721.	effect on determination of humus, (31) 111.
manufacture, (28) 424, 723; (30) 427, 721.	effect on germination and growth of crops
mannachre-	(34) 125.
from the air. (29) 822. methods, (27) 520.	fertilizing value, (35) 126, 218, 519.
methods, (27) 520.	utilization by soil fungi, (39) 623.
Serpek method, (31) 518.	chlorid—
metabolism, relation to acid and base-forming	absorption by plants, (35) 435.
metabolism, relation to acid and base-forming elements in foods, (26) 158. methods of analysis, (27) 609.	as source of nitrogen for the body, (30) 65.
montoning of analysis, (21) 000.	
nesslerization in urine, (39) 111.	chlorid, effect on— forric and aluminum hydroxids during igni-
nitrie acid from, (29) 517. origin and significance in portal blood, (26) 870.	tion, (34) 205.
oxidation, (38) 311, 710; (40) 815.	germination of seeds, (29) 328.
oxidation in plants, (34) 627.	plants and microorganisms, (27) 229.
physical and chemical data, (40) 607.	solubility of sulphates, (28) 818.
production in United States, (28) 522.	45.45
protein, determination in water, (33) 501.	chlorid—
retention by soils, (36) 299.	fertilizing value, (35) 126, 218, 325, 427, 518.
salt, effect on nitrogen retention in goats, (32)	hydrolysis of sugar cane by, (30) 811.
261.	citrate—
separation from pyridin, (26) 709.	effect on phosphates, (31) 125.
solutions, effect on saccharin substances, (26)	solubility of calcium phosphates in, (33) 412.
307.	citrate solution—
sources in soils, (20) 723.	apparatus for preparing, (27) 8.
"superphosphate of," (40) 127.	neutral, notes, (28) 19.
synthesis—	neutral, preparation, (26) 709; (27) 110; (28) 312; (29) 203, 718; (31) 410.
at high temperatures, (39) 817.	312; (29) 203, 718; (31) 410.
Haber process, (38) 423.	preparation, (32) 116, 804; (38) 205.
synthetic	compounds—
manufacture and use, (35) 428.	assimilation by streptothrix, (27) 621.
manufacture, progress in, (29) 730. preparation, (28) 222; (29) 127. tablet, reagents for, (26) 608.	effect on baking quality of flour, (30) 555.
preparation, (28) 222; (29) 127.	of fatty acids, properties, (26) 23.
titrotions indicators (20) 505.	stereochemistry and biological action, (35)
titrations, indicators for, (38) 311.	435.
utilization—	humate as a source of nitrogen for plants, (30)
hy nee seedlings (27) 720	721.
by corn plantlets, (27) 634. by pea seedlings, (27) 730. in protein metabolism, (29) 365.	hydroxid, use in extraction of rosin, (34) 412.
Ammoniacal—	magnesium phosphate—
nitrogen, fertilizing value, (39) 726.	from urine, (40) 320,
salts, adding to diet, (34) 762.	precipitation in presence of ammonium
salts, effect on saccharification of starch, (26)	precipitation in presence of ammonium citrate, (32) 804.
309.	nitrate, displacement of potash by, (37) 321.

52831-26†---3

Ammonium—Continued.	Ammonium—Continued.
nitrate, effect on—	sulphate, effect on—continued.
germination of dodder, (27) 28.	marsh plants, (29) 531. milk, (27) 506.
nitrogen-assimilating bacteria, (38) 724. nodule formation, (37) 133.	nitrification, (29) 21.
plants, (28) 225. soils, (26) 216; (28) 520.	nitrogen fixing power of Azotobacter, (29)
soils, (26) 216; (28) 520. solubility of iron phosphate, (37) 324.	nodule formation, (37) 133.
nitrota	Penicillium variable, (29) 529.
fertilizing value, (27) 342; (29) 423; (31) 518, 822; (32) 831; (33) 25; (34) 130, 518; (35) 218, 427, 518; (36) 626, 818; (37) 739; (39)	phosphorite, (29) 624. plants, (27) 634; (28) 225.
822; (32) 831; (33) 25; (34) 130, 518; (35)	resistance of grain to hail, (30) 519.
726; (40) 622.	rotation of lactose, (33) 415.
for mangels, (29) 830.	rotation of lactose, (33) 415. soil acidity, (28) 137; (37) 815; (38) 20, 620. soils, (27) 622; (28) 520; (29) 417; (30) 220.
manuacture, progress in, (29) 730.	solubility of calcium and phosphoric acid,
manufacture, progress in, (29) 730. preparation, (38) 310. production, (32) 423.	(39) 23.
utilization by soil lungt, (39) 623.	solubility of phosphates, (28) 818.
oxalate, nitrification rate, (32) 124. permutite, fertilizing value, (29) 127.	weed growth in meadows, (38) 141. yield of rubber, (31) 444.
persulphate, effect on germination of seeds, (26)	sulphate—
820.	sulpinate— fertilizing value, (26) 42, 125, 323, 321, 329, 330, 425, 534, 536, 629, 630, 635, 723, 529, 637, (27) 135, 218, 336, 724, 832, 838, 837; (28) 521, 533, 723, 724, 725, 736, 827, 832; (29) 23, 125, 127, 213, 829, 831; (30) 125, 427, 437, 526, 626, 632, 736, 835; (31) 36, 37, 124, 137, 517, 518, 731, 820, 829; (32) 323, 831, 832; (33) 33, 219; (31) 24, 25, 128, 129, 131, 219, 518, 520, 622, 820; (35) 30, 124, 124, 124, 125, 128, 129, 518, 520, 622, 820; (35) 30, 124, 124, 124, 125, 128, 129, 518, 529, 627, 636, 733, 739, 824; (38) 135, 137, 215, 229, 516, 517, 624, (39) 32, 241, 328, 428, 438, 529, 530, 537, 622, 623, 726, 817; (40), 134, 626, 633, 824, 627, 636, 738, 738, 624, 628, 726, 817; (40), 636, 636, 637, 628, 628, 726, 817; (40), 636, 636, 638, 824, 638, 627, 638, 824, 638, 626, 638, 824, 638, 627, 638, 824, 638, 626, 638, 824, 638, 627, 638, 824, 638, 626, 628, 726, 817; (40), 636, 636, 638, 624, 628, 628, 628, 628, 628, 628, 628, 628
phosphate, effect on— decomposition of soy bean fodder, (40) 214.	537; (27) 135, 218, 336, 724, 832, 833, 837;
decomposition of soy bean fodder, (40) 214. germination of seeds, (29) 328.	(28) 521, 533, 723, 724, 725, 736, 827, 832;
phosphale, lertilizing value, (35) 519; (39) 522.	(29) 23, 125, 127, 213, 829, 831; (30) 125, 427, 427, 596, 696, 639, 736, 835, (31) 26, 37, 194.
presence in plants, (38) 629. salt, peculiar plant physiological action of, (34) 724.	137, 517, 518, 731, 820, 829; (32) 323, 831,
	832; (33) 33, 219; (31) 21, 25, 128, 129, 131,
salts— absorption and solution in soils, (35) 512.	325, 336, 427, 518, 519, (36) 30, 120, 218, 328, 325, 336, 427, 518, 519, (36) 121, 134, 332,
absorption by plants, (35) 433, 435. and soll constituents, interaction, (32), 121.	338, 637, 818, 833; (37) 123, 229, 321, 426,
and soil constituents, interaction, (32), 121.	539, 627, 636, 733, 739, 824; (38) 135, 137,
as feed for pigs, (31) 265. assimilation by plants, (32) 121.	438, 529, 530, 537, 622, 623, 726, 817; (40),
bacterial oxidation, (33) 124.	134, 626, 633, 824.
Salts, effect on—	for arid soils, (34) 621; (36) 726.
baking quality of flour, (26) 356. dogs, (28) 568.	coffee. (40) 43.
nodule production, (32) 727; (33) 134.	PERSS 19.00. (33) 527. (36) 438.
phosphorites, (35) 516. plants, (32) 538.	lawn grasses, (40) 125.
solubility of phosphates, (36) 626.	lnwn grasses, (40) 125. moor soils, (39) 438. peat soils, (39) 428.
salts—	pineappies, (38) 748.
fertilizing value, (38) 121. flocculating power on clay, (27) 620.	potatoes and sugar beets, (31) 833. rubber trees, (26) 339.
manufacture, (28) 424.	sugar cane, (32) 336; (36) 219; (40) 242,
metabolism of, (30) 64.	533.
method of testing, (27) 208. ninhydrin reaction with, (35) 614.	fractioning of complement with, (33) 280. from ammonia and sulphur dioxid, (29) 24.
nitrification in soils, (26) 722.	from peat, (31) 321; (39) 425. history and manufacture, (34) 423.
separation from fatty acids, (26) 112. utilization by plants, (27) 634; (29) 133.	imports into United States, (26) 324.
sodium sulphate, fertilizing value, (35) 218, 325.	sulphate industry—
sulphate— action as affected by distribution in soils,	in Austria-Rungary, (33) 822.
(35) 518.	in Germany, (31) 30. in Great Britain, (39) 522.
action on muscovite, (37) 505.	status, (27) 128, 519.
absorption by soils and quartz sand, (37)	sulphate, injurious—
analysis, (39) 222.	effect, (38) 624. to fish, (29) 821.
application, (34) 24; (38) 624. as affected by lime, (26) 320.	to plants, (34) 135.
as top-dressing for grains, (37) 29.	sulphate— long-continued use, (34) 131, 622
as top-dressing for grains, (37) 29. as winter spray for fruits, (30) 641.	long-continued use, (34) 131, 622. loss from soils, (29) 211.
availability, (40) 125. sulphate, availability—	manufacture, (30) 721. sulphate, manufacture—
in presence of sodium nitrate, (38) 723.	and use, (27) 624; (35) 428.
in relation to soil reaction, (37) 521. of nitrogen in. (35) 123; (39) 817	from sewage sludge, (26) 624. in United States, (27) 22.
sulphate containing sulphocyanid, fertilizing	n United States, (27) 22, progress in (28) 818
value, (31) 422.	progress in, (28) 818. sulphate, nitrification, (34) 127.
sulphate, effect on— acid soil, (39) 627.	Suiphate, nitrilication—
action of phosphates, (35) 326.	in acid soils, (30) 626. in soils, (26) 319; (31) 818; (39) 814. rate, (32) 124.
assimilation of phosphates, (29) 318. Azotobacter, (31) 721.	rate, (32) 124.
bacterial flora of soils, (28) 815.	sulphate— nitrogen assimilation from, (27) 331.
burning quality of tobacco, (38) 140.	oxidation, (39) 619.
carnations, (36) 446.	preparation, (40) 801
composition of meadow hay, (34) 620. decomposition of feldspar, (30) 126.	oxidation, (39) 619. preparation, (40) 501 production, (39) 428. sulphate, production—
decomposition of soy bean fodder, (40) 214.	and use, (27) 327, 420; (29) 126, 213, 318, 517:
disease susceptibility in cereals, (29) 844. germination and growth of barley, (40) 218.	and use, (27) 327, 420; (29) 126, 213, 318, 517; (30) 126; (32) 425, 517; (33) 218, 219. from peat, (34) 522.
germination of seeds, (29) 328.	from sewage. (34) 424.
grass lands, (30) 133.	from sewage, (34) 424. in France, (37) 727. in Natal, (40) 127, in 1913, (31) 725. in 1915-16, (37) 594, 721
growth of soy beans, (40) 30. hydrogen-ion concentration in soils, (39) 425.	in Natal, (40) 127,
legume bacteria, (29) 733.	in 1015_18 /27\ 504 701

Ammonium—Continued.	Amyloidosis ın fowls, (39) 393.
sulphate	Amyloids, variations of in leaves, (29) 827.
relation to citrus chlorosis, (39) 458.	Amylometer, description, (32) 114.
secondary and subsidiary effects, (30) 26.	Amylometer, description, (32) 114. Amylomyces prainii, notes, (28) 761. Amylopsin, notes, (34) 257.
source, production, and use, (38) 817.	Amylopsin, notes, (34) 257.
storage on the farm, (40) 25.	Anabaena sp., notes, (28) 31.
trade in, (31) 29. use, (39) 117.	Anaca dium occidentale, notes, (29) 746.
use, (39) 117.	Anaerobes —
use against weeds, (29) 530. use in combination with salt, (33) 220.	culture methods, (39) 887.
use on calcarcous soils, (32) 622.	pathogenic, biochemistry, (38) 483, 503, 504; (39) 887; (40) 577.
use on peat soils, (37) 135; (38) 433.	nathogenie culturo (40) 677

n.var description, (30) 57.	intestinal, in swine, (29) 888. n.spp., descriptions, (37) 565.
notes, (31) 350. relation to cotton culture, (33) 257.	nature and treatment, (26) 883. notes, (20) 279, 373; (27) 81, 475, 576; (32) 778; notes, (20) 279, 373; (27) 81, 475, 576; (32) 778;
hicoriae, notes, (37) 560.	(34) 575, 879; (36) 678, 779; (38) 179, 784; (39)
hicoriae, notes, (37) 560. pedicularius in Bessarabia, (38) 163.	387; (40) 86, 676, 778.
pomorum	outbreak-
in Russia, (34) 857. notes, (31) 848; (33) 652.	among tannery workers, (37) 79. due to tannery refuse, (32) 373.
parasites of, (29) 562; (40) 65.	outbreaks in England, (38) 282.
quadrigibbus, see Apple curculio.	precipitation, control extracts for, (32) 578.
rubi, notes, (29) 658.	
signatus, see Strawberry weevil. spp., biology and remedies, (33) 750.	prevalence in— Great Britain, (27) 680; (81) 177; (34) 382; (36) 378.
spp., notes, (27) 54; (30) 357.	Hawaii, (38) 80. Japan, (31) 82. Panama, (28) 79.
spp., notes, (27) 54; (30) 357. suturalis, notes, (33) 352. vestitus, notes, (29) 562, 658; (32) 658.	Japan, (31) 82.
vestitus, notes, (29) 562, 658; (32) 658.	Panama, (28) 79. Prussia. (27) 181.

52831--26†----4

Anthrax—Continued.	Anticarsia—Continued.
relation to buzzards, (28) 79.	gemmatilis— in West Indies, (38) 58.
resistance in fowls, (27) 378. review of investigations, (38) 182.	life history, (36) 450. notes, (31) 752.
serodiagnosis, (31) 877.	notes, (31) 752, studies, (34) 358; (35) 852, 854; (39) 461.
serum— anaphylavis after using, (32) 373.	studies, (34) 358; (35) 852, 851; (39) 461. Anticoli serum, Jensen's studies, (32) 582.
immunity studies, (36) 577. precipitating, investigations, (31) 281.	Anticyclones— in United States, (30) 807; (36) 718.
precipitating, preparation, (27) 182.	nature, (32) 810.
preparation, (36) 779. purification, (39) 183.	Anticyclonic stratus, formation, (38) 511. Anticyclonic stratus, formation, (38) 512.
review of literature, (10) 81.	Antiery sipelas serum, preparation, (29) 378.
valuation, (31) 52, 181. spores—	nature of (35) 382.
destruction in hides, (31) 677; (33) 178;	Anticrysipelas serum, preparation, (29) 378. Antiferments, bacte inl— nature of, (35) 382. studies, (32) 678.
(35) 882. disinfection in tannin effluent, (36) 180.	Antiformin— action on tubercle bacilli, (31) 581.
germination as affected by culture media,	diagnostic value, (29) 285.
(26) 751. longevity, (26) 781.	Antigaster mirabilis, notes, (31) 650. Antigen—
resistance to heat, (35) 487.	and antibody, coexistence in serum, (34) 779;
studies, (29) 478; (37) 78.	(37) 877; (30) 584. and antiserum, simultaneous injections, (36)
symptomatic, see Blackleg. transmission, (26) 678; (39) 161.	677. dose and antibody production, relation, (38)
transmission by—	584.
biting flics, (31) 776. carrion feeders, (28) 678.	intracutaneous absorption, (38) 482. precipitin, production from bacteria, (38) 483.
insects and animals, (30) 780. stable files, (28) 756; (29) 761; (32) 552. treatment, (27) 182, (86); (29) 679; (35) 379, 784; (38) 483, 586; (40) 582.	protein-free, injection of rabbits with, (27) 382.
treatment, (27) 182, 680; (29) 679; (35) 379,	relation to antibody within the cell, (38) 78.
unusual, in a mare, (26) 279.	serum mixture, injection of rabbits with, (27) 382.
Anthrenus scrophulariae, see Carpet-beetle.	synthetic, for meiostagmin reaction, (31) 178.
Anthrocephalus n.spp., descriptions, (28) 162. Anthrothrips—	Antigenic— action of separated horse serum proteins, (36) 877.
dozieri n.sp., description, (40) 353.	properties of β -nucleoproteins, (37) 77. Antigens—
floridensis n.sp., description, (37) 561. North American species, (37) 561.	bacterial, dried, (40) 678.
Anthus rubescens, destruction of grain aphids by,	bacterial, preparation, (40) 478.
(29) 453. Anthylis cytisoides, analyses, (33) 466.	containing cholesterol, use, (32) 272. detection, (29) 881, 882.
Antiagressin serums, notes, (27) 883.	detection and concentration, (34) 579. excretion, (34) 579.
Antianaphylaxis— nature of, (30) 478.	from serum-grown bacteria, nonspecific reac-
studies, (37) 178.	tions, (35) 679. in cultures of tubercle bacilli, (31) 778.
Antianthrax serum, preparation, (29) 378; (30) 280. Antibodies—	notes, (26) 676. plant, hemagglutinating and precipitating
and antigens, coexistence in the body, (35) 781.	capacity, (26) 607.
and antigens, coexistence in the body, (35) 781. detection, (29) 881, 882. detection in blood of horses immunized with	preparation, (32) 78.
voidagsen bacilli, (30) 685.	preservation, (26) 83. fuberculous, (40) 481, 886, 887.
fate in precipitin reaction, (34) 877. fixation in vitro, (26) 579.	tuberculous-
formation—	inhibition reaction of, (31) 481. notes, (29) 583.
as affected by exudate leucocytes, (26) 278. during preparation of serums, (29) 581.	preparation, (26) 783. visible detection, (20) 579.
in blood of immunized horses, (28) 779.	Antigeny, problem in. (27) 655.
review of investigations, (28) 180. hemolytic, preparation and action in vitro,	Antiglanders serum, preparation, (36) 670. Antihematoxins, bacterial, notes, (26) 676; (32) 78.
(40) 380.	Antinemolysin in animal sorums, (28) 179.
in Dorset-Niles serum, (29) 82. in rats fed pure vegetable proteins, (32) 875.	Antihog-cholera serum— bacterial studies, (32) 271
in tuberculosis and Johne's disease, (31) 882. liberation on injection of foreign protein, (40)	bacterial studies, (32) 271. distribution, (26) 888; (29) 888.
180.	emciency, (28) 587.
local production of, (26) 579. nature, (37) 76.	keeping quality, (30) 185. notes, (31) 781.
nonspecific, passive transference, (36) 878.	preparation, (32) 83, 277, 378, 480, 676, preparation and standardization, (31) 885.
notes, (26) 676. of spores, (36) 380.	preparation and use, (31) 86.
of the lymph, origin, (35) 73.	production and distribution in California, (30) 484.
preparation, (32) 78. production, effect of arsphenamin and mercuric	production and use, (29) 888.
chlorid on, (40) 287.	standardization, (32) 880. use, (29) 482; (32) 83, 277.
relation to antigen within the cell, (38) 78. specific, in blood serum of tuberculous subjects,	Antihog erysipelas serum, preparation, (28) 381. Antiketogenesis, theory of, (34) 462.
(27) 481.	Antimony—
studies, (36) 80, 576. transmission from mother to fetus, (38) 284.	detection in water, (34) 410. effect on geese, (28) 73.
tubercular	effect on respiration in plants, (33) 30.
inhibition reaction of, (31) 481. notes, (29) 583.	use against spirochete and trypanosome diseases, (31) 254.
production in bovines, (30) 582. production in sound animals, (28) 585.	Antineuritic—
studies, (35) 784.	substance from egg yolk, (37) 308. substances, isomerism in, (36) 314.
Anticali dysentery serum, valuation, (28) 782. Anticarsia—	Antineuritis hases, vegetable, relation to beri-beri,
caterpillar on velvet beans, (33) 58.	(28) 67. Antiopsonic test, diagnostic value, (26) 283.

Antioxiduse-	Antitoxin—
notes, (37) 203.	absorption as affected by protein concentration,
of tomato plants, (34) 33.	(32) 372.
Antiperistalsis, relation to bacteria in alimentary	concentration, (36) 178, 179; (39) 487.
traet, (28) 882. Antiphenol serum, tests, (35) 279.	dosage, relation to sorum sensitization, (32) 372. in milk of immunized sheep, (27) 680.
Antiphymatol—	oral administration of, (26) 83.
tests, (28) 680.	preparation, (26) 374.
use against tuberculosis, (31) 779; (32) 143; (33)	preparation and standardization, (33) 280.
284, 481. Antipolyneuritic substances from carrots and yeast,	studies, (39) 489. Antituberculin, notes, (26) 379.
(40) 174.	Antituberculosis—
Antipyrin—	immunity, notes, (26) 379.
determination, (20) 800.	immunity, notes, (26) 379. serum, notes, (27) 580. Antler moth, notes, (38) 361.
periodids of, (36) 313.	Antier moth, notes, (38) 361.
Antirabic— moculations, local reaction in, (26) 177.	Antorgan as a wood preservative, (30) 647.
vaccine, preparation, (26) 782.	Ants—
Antiricin, chemical nature, (30) 201.	acacia, of Central America, (31) 452. acrobat, notes, (31) 853; (35) 254.
Antiruderpest serum—	agneultural or hillock, studies, (27) 263.
preparation, (28) 782.	animals associated with, (26) 348.
preparation, (28) 782. production, (27) 380. tests, (27) 350; (29) 285.	Argentine—
Antirrhinum inglus—	as an orchard pest, (37) 568. control, (36) 60; (39) 264.
factor counting in. (28) 531.	distribution and control, (35) 761.
flower pigments, (31) 221; (32) 202, 203, 220.	in California, (26) 254; (29) 654.
Antirrhinum spp., hybridization experiments, (30)	citrus groves, (39) 155, 156.
Antirrhinums, culture experiments, (31) 340.	Silesia, (37) 766. Texas, (31) 256.
Antiscorbutic-	natural enemies, (40) 65.
factor in lemon fuice. (10) 364, 869.	notes, (29) 654; (34) 158; (40) 655.
factor, studies, (10) 269, 272. property of vegetables, (40) 172, 762.	studies, (29) 563.
property of veretubles, (40) 172, 702.	as curriers of—
substance— distribution in foodstutis, (40) 868.	blister rust, (39) 248. cholera vibrios, (31) 752.
in sprouted grains, (40) 565, 869.	pathogenic inicro-organisms, (31) 849.
Antiscorbuties, rôle in the diet, (40) 70.	as fruit tree pests, (32) 551.
Antiseptic—	behavior toward farvae of Lycaena spp., (27)
properties of some organic compounds, (30) 412. solution of crystal violet and brilliant green, (40)	258.
285.	black garden, notes, (27) 54. eacao, studies, (39) 158.
solutions, bleaching powder for, (40) 414.	combating, (39) 59.
use of brilliant green for, (40) 581.	common house, trail formation and orientation,
Antiseptics—	(29) 860.
action— of, (29) 802.	control in dwellings, (36) 555. cornfield—
on Bacillus welchii toxin, (39) 185.	capture of living insects by, (33) 258.
on necrotic tissue, (38) 685.	life history, (29) 860.
on pus and pure cultures, (36) 479.	cutting or parasol, studies, (27) 263.
hactericidal properties, (34) 675. chlorinated, alkalinity and acidimetry of, (39)	destruction—
506.	by dynamite, (31) 125. of pigs by, (26) 483.
comparative study, (37) 176.	destructive to—
effect on-	bagworms, (27) 558. ily larvae, (28) 255. distribution of pear blight hy, (33) 140. economic importance, (40) 547.
action of multase, (28) 503.	ily larvae, (28) 255.
concentration of soil solution, (37) 719. crop growth, (31) 27.	economic importance (40) 547
soils, (35) 515.	feeding habits, (31) 458.
efficacy, studies, (39) 80.	feeding habits, (31) 468. fire, notes, (28) 158, 853.
handbook, (39) 181. mixtures of action, (40) 581.	iungus-growing—
new, (38) 283, 782; (30) 80, 680, 885.	in Louisiana, (38) 564. of Texas, (26) 658.
oil, germicidal power, (40) 882.	remedies, (35) 701.
papers on, (40) 779. soil, tests, (28) 538.	Gramang, economic amportance, (8) 364.
soil, tests, (28) 538.	guamá, remedies, (31) 637. harvester, notes, (20) 453.
sterilization of soils by, (32) 816.	harvester, remedies, (32) 549; (33) 57; (35) 551;
toxicity, (39) 586. use in food materials, (26) 564.	(39) 760.
volatile-	house, eradication, (39) 761.
effect on soil bacteria, (31) 516.	house, remedies, (35) 555.
effect on soils, (37) 519.	injurious to—
Antiserum— specific, for infections of unknown cause, (40)	eneno, (27) 53. eoffice, (27) 856; (29) 652. okra, (29) 653. tobacco, (30) 759.
1179	okra, (29) 653.
testicular, toxicity, (28) 676.	tobacco, (30) 759.
Andsheep	an vac, statues, (40) 555.
amboreptor, production, (35) 574.	leaf-cutting, control in Argentina, (26) 452.
hemolytic ambocceptor, preservation, (38) 181. Antistrangles vaccine, use, (30) 180.	little brown, destructive to flies, (30) 554- lycenid reared by, (31) 352.
Antistrentococcus serum—	lycenid reared by, (31) 352. notes, (40) 259. of Great Britain, guide, (35) 262.
curative power, (31) 479.	of Great Britain, guide, (35) 262.
NUCLES, (20) 079.	Figiti (24) 556
curitive power, (31) 479. studies, (26) 579. tests, (32) 272. Antitetanic serum, efficacy of, (31) 379. Antithorophy, riefficacy of, (31) 379.	Gram, (27) 284. Haiti, (34) 550. Hawaii, (30) 759; (34) 59; (38) 557. Illinois, list, (22) 758. Indiana, list, (39) 768. South Carolina, (38) 768. Wisconsin, list, (39) 869. orientation of, (33) 563. Papers on. (27) 656.
Antithorombin, rôle in coagulation of blood, (26) 580.	Illinois, list, (28) 758.
Antitoxic-	Indiana, list, (39) 768.
rôle of oxhydridase, (40) 580.	South Carolina, (38) 768.
serum, concentration, (37) 376; (40) 287, 288. serum production, (40) 580.	orientation of, (33) 563.
substances, studies, (40) 179.	papers on, (27) 656.

remedies, (39) 763. studies, (40) 59, 60.	spot, studies, (27) 652; (33) 247.
caterpillar—	spots and rots, studies, (35) 242. spur system, (36) 239.
rêd-humped, notes, (28) 158; (30) 157; (39) 761.	gnarly disease, notes, (38) 453. grafts, comparative growth, (32) 635.
yellow-necked, notes, (36) 358. chlorosis, treatment, (30) 749.	heart rot, studies, (35) 653.
	hold-over blight, studies, (26) 646. industry—
cider as a source of method, (33) 316. cider, proparation, (33) 316. collar blight, notes, (31) 346. collar blight, studies, (34) 247; (35) 548. collar rot, studies, (34) 154, 156. cork, studies, (37) 350. cracking disease— notes (32) 344	in United States, (36) 536.
collar blight, notes, (31) 340. collar blight, studies, (34) 247; (35) 548.	in Virginia, census, (40) 149. ielly, manufacture, (37) 15; (40) 414.
collar rot, studies, (34) 154, 156.	jeny, preparation, (39) 808.
cork, studies, (37) 350.	Jouathan spot— rot. notes. (29) 847, 848; (31) 748; (34) 157;
110000, (02) 0111	rot, notes, (29) 817, 818; (31) 748; (34) 157;
studies, (39) 149. cricket canker, (35) 547.	studies, (38) 353. juice—
crown gall— studies, (35) 35; (39) 856.	analyses, (33) 240; (37) 502; (40) 764. fermentation, (30) 801.
varietal relations, (37) 554.	notes, (29) 116.
curculio— notes, (26) 759.	osmotic pressure, (28) 262. physico-chemical constants of, (31) 427.
remedies, (34) 147; (37) 242; (39) 348.	preservation by pressure, (32) 416.
die-back, notes, (28) 54; (32) 644. die-back, studies, (37) 551.	studies, (29) 711.
disease in New Zealand, (35) 456.	June drop, (38) 745. leaf—
disease, notes, (31) 539.	blister mite, notes, (35) 263.
and pests, treatment, (38) 843.	cast, notes, (38) 647. crumpler, notes, (26) 856.
descriptions, (31) 449. in Indiana, (38) 251.	diseases, description, (35) 752.
Iowa, (29) 445. New South Wales, (34) 247.	dry spot, notes, (34) 842. jassid, description, (40) 261.
New York, (40) 249, 251,	miner, notes, (32) 651; (35) 253. miner, unspotted tentiform, notes, (29) 655.
New Zoaland, (38) 452.	mining case bearer, notes, (38) 862.
New Zoaland, (38) 452. Pennsylvania, (34) 646; (35) 351. Tasmania, (36) 846.	mites, notes, (37) 570. roller, notes, (36) 457, 855.
inoculation experiments, (27) 051. manual, (30) 642.	roller, remedies, (37) 54.
notes, (26) 55, 742, 840, 844; (27) 241, 349,	sawfly, notes, (30) 53. scorch, notes, (29) 845; (40) 844.
notes, (28) 55, 742, 840, 844; (27) 241, 349, 353; (28) 544, 555, 747; (29) 146, 242, 353; (30) 245; (31) 641, 644; (32) 544, 641; (33) 447, 741, 840; (37) 51; (38) 50, 550; (39)	scorch, studies, (38) 049. sewer, studies, (36) 251.
447, 741, 840; (37) 51; (38) 50, 550; (39)	sewer, studies, (36) 251. sewer, notes, (38) 358.
402: (40) 00.	lenf spot—
spray calendar for, (26) 530. studies, (26) 440; (28) 240; (29) 649; (32)	description, (30) 50, 650. in Indiana, (39) 52.
750; (33) 544. treatment, (26) 48; (27) 39, 849, 855; (28)	in Indiana, (39) 52. notes, (29) 748; (34) 54. studies, (28) 548; (31) 150; (33) 247.
treatment, (26) 48; (27) 39, 849, 855; (28) 58; (31) 151, 335; (32) 751; (33) 45, 349; (34) 747; (35) 752; (37) 51.	treatment, (27) 153; (30) 650.
drop caused by lime-sulphur, (40) 5%.	leaf trumpet miner, notes, (30) 657.
drought spot, studies, (37) 350. ermine moth—	black, see Idiocerus provancheri.
identity and distribution, (38) 860.	life history and habits, (38) 858, 859; (39) 61. notes, (26) 59; (27) 755, 858; (28) 752; (29)
notes, (29) 252. studies, (28) 557.	354; (33) 352, 356.
eye rot, notes, (35) 151.	on potato, (40) 358. relation to fire blight, (36) 351.
fire blight— description, (35) 848.	leaves—
dissemination by bees, (35) 662. notes, (29) 848; (31) 749; (32) 844; (33) 53.	as affected by Gymnosporangium, (26) 649; (30) 245.
relation to fertilizers, (28) 144.	diseased, respiration in, (32) 751. infection by cedar rust, (29) 49, 647, 648.
studies, (29) 348. flea weevil	infection by Gymnosporangium macropus,
notes, (28) 156; (34) 254.	(29) 647. limb diseases, notes and treatment, (29) 49.
notes, (28) 156; (34) 254. remedies, (31) 456. flour, studies, (40) 762.	maggot—
nower wilt and young iruit rot, (36) 148.	affecting blueberries, (32) 350; (33) 97; (34) 852.
flowers— and fruits, abscission, (37) 240.	biology and remedies, (29) 560. control, (40) 163, 654.
polymorphism in, (28) 540.	in Emilian Collimnia (37) 665° (40) 654.
foliage— diseases, investigations, (27) 152.	in Nova Scotia, (35) 853. in Ontario, (30) 53. notes, (20) 753; (32) 448; (36) 856; (40) 57, 169,
diseases, investigations, (27) 152. studies, (26) 407. wind scorch of, (33) 148.	notes, (20) 753; (32) 448; (36) 856; (40) 57, 169,
will scored of, (66) 140.	654.

Apple—Continued.	Apple—Continued.
maggot—continued. remedies, (31) 757; (33) 59; (35) 660; (38) 358. studies, (32) 153; (38) 262.	scab— control, (39) 251, 349, 352, 548, 552, 651. description and treatment, (38) 550.
studies, (32) 153; (38) 262. mildew—	description and treatment, (38) 550.
in Sweden (33) 846.	fungus, overwintering, (38) 151. fungus, perithecia of, (31) 449; (35) 351. infection, relation to height of fruit, (37) 51.
in Washington, (38) 47.	infection, relation to height of fruit, (37) 51.
in Washington, (38) 47. notes, (35) 650; (36) 541. parasites of, (31) 544. treatment, (26) 750; (34) 352; (38) 47; (40) 251,	infection, relation to neight of fruit, (37) of notes, (28) 247; (30) 147; (33) 247; (34) 247, 840; (36) 347, 647; (38) 546, 848, 852; (40) 748. on twies, (38) 251.
treatment, (26) 750; (34) 352; (38) 47; (40) 251, 849.	on twigs, (38) 251.
moth, light brown, notes, (27) 57.	overwintering, (35) 753. resistance to, (36) 649.
mushroom root rot— notes and treatment, (28) 748.	
studies, (35) 242.	studies, (27) 546; (30) 542, 848; (31) 645; (33)
care and management, (29) 42, 353; (31) 45	source of spring intertoin, 257 for. spraying v. dusting for, (31) 449. studies, (27) 546; (30) 542, 848; (31) 645; (33) 148, 347 (37) 555. treatment, (27) 153; (28) 448, 544; (29) 146; (30) 348, 840; (31) 346, 439; (32) 51, 540, 751; (33) 237, 247, 347, 648; (34) 747, 843; (35) 248, 249, 343, 417, 548, 549; (30) 50, 351; (27) 249, 557, 755, (28) 540; (40) 154, 241, 647
cost of establishing, (36) 444.	(30) 348, 840; (31) 346, 439; (32) 51, 540,

	An Inc. Court of
Apples—Continued.	Apples—Continued. parthenocarpy in, (34) 226.
from seions from high- and low-producing parents, (31) 334.	pear blight on, (40) 349.
frost injury, (27) 546; (29) 49, 547; (37) 344.	pear thrips affecting, (27) 156; (40) 547.
frozen, as affected by rapid thawing, (32) 43.	pear thrips affecting, (27) 156; (40) 547. picking and handling, (34) 437. picking maturity, (37) 543.
fruitfulness, factors in, (40) 836.	picking maturity, (37) 543.
girdling, (40) 837.	plant food removed by, (36) 39. planting—
grading and handling, (34) 149. grading and packing law in Delaware, (37) 745.	and care. (38) 245.
grading and packing law in Maryland, (37) 143.	and care, (38) 245. costs, (38) 41.
graft hybrid, (31) 140, (39) 241.	with dynamite, (32) 535; (35) 236, 752.
grafting experiments, (39) 40.	with dynamite, (32) 535; (35) 236, 752. pollination, (27) 744; (31) 534; (32) 743; (34) 233, 341; (39) 138; (40) 148, 149, 638, 740.
grafting on pear stocks, (37) 40. graphic summary of seasonal work, (39) 495.	pollination, relation to weather conditions, (35)
gross morphology, (29) 541.	237.
gross vascular anatomy, (36) 140.	preservation, (29) 312.
growth—	prices and receipts in Boston, (39) 895.
and color development, (35) 838.	propagation, (33) 238. propagation and shipping experiments, (34) 637.
as affected by meteorology, (29) 510. as affected by soils, (29) 416.	protection against rabbits, (34) 250.
studies, (39) 844.	pruning, (29) 148; (30) 739; (33) 837; (37) 344; (39)
handling and storing, (35) 342; (38) 143.	541; (40) 639.
hardiness—	pruning— and training, (37) 344.
in, (35) 236. in relation to structure and composition,	at planting, (34) 342.
(34) 342.	experiments, (26) 45; (35) 142; (36) 237, 535;
on different stocks, (40) 837.	(37) 240; (39) 40, 139, 347; (40) 837.
hardy varieties, (39) 445. harvesting, (34) 438.	studies, (39) 42.
harvesting, (34) 438.	summer, (34) 533. summer v. winter, (34) 738; (37) 647.
harvesting and marketing, (36) 742.	wounds, (40) 341.
harvesting dates, (30) 344. hawthorn aphis affecting, (26) 247.	quality in, analysis, (29) 40.
household use, (40) 173.	receipts and wholesale prices in New York City,
household use, (40) 173. improvement, (28) 144; (35) 342. improvement by scion selection, (33) 237, 239.	(31) 46. reducing and nonreducing sugars in, (29) 503.
incipient drying of leaves and fruit, (35) 238.	respiration of in gases, (29) 135.
inflorescence and Irillic OL (30) 331.	ringing and stripping, (39) 40. ringing experiments, (32) 636. ringing wounds, (39) 41.
inheritance of characters, in, (28) 639. inoculation experiments with brown rot fungus,	ringing experiments, (32) 636.
inoculation experiments with brown rot lungus,	ringing wounds, (39) 41.
(33) 247. insect scars, (39) 257.	ripening— chemical and physical changes, (39) 121.
insects affecting, (26) 48, 742, 757, 840; (29) 353; (30) 642, 753, 853; (33) 45, 59, 652, 695, 840; (34) 833; (35) 853; (37) 847, 848; (38) 150, 460, 843.	factors in, (39) 310.
(30) 642, 753, 853; (33) 45, 59, 652, 695, 840; (34)	process, (34) 201.
833; (35) 853; (37) 847, 818; (38) 150, 460, 843.	rôle of polyatomic phenols in, (26) 208.
insoluble carbohydrates or marc, (27) 39, 241, 255, 664.	root pruning, (39) 40. Sclerotinia sp. affecting, (26) 343.
internal structure, (36) 41.	Sclerotinia sp. affecting, (26) 343. score cards for, (28) 492; (35) 236.
interrelation of root and scion, (35) 142.	seed production, (38) 245; (39) 40. seedless, tests, (29) 42.
irrigated—	seedlessness in, (30) 642.
and nonirrigated, composition, (30) 643. keeping quality, (32) 743.	seedling—
irrigation experiments, (27) 743; (33) 683; (38)	descriptions, (27) 343. from selected trees, (39) 844.
242.	notes, (32) 539.
keeping quality, (34) 634; (38) 844; (40) 246. keeping quality, relation to soil moisture, (37)	variation in. (30) 144.
41: (40) 741.	selection experiments, (33) 236, 237; (37) 743. self-fertility, (37) 744; (39) 541.
lead arsenate injury, (31) 141; (40) 639. leopard moth affecting, (26) 150. Lepidoptera infesting, (40) 756.	self-fertility, (37) 744; (39) 541.
leopard moth affecting, (26) 150.	self-fruitfulness and self-sterility in, (31) 337. self-sterility in, (33) 236; (35) 837; (40) 148.
limb and twig disease of (36) 746	sensitivity to poison, (35) 456, 457.
liming experiments, (39) 445.	shipping, heavy loading in, (39) 748.
limb and twig disease of, (36) 746. liming experiments, (39) 445. marketing, (32) 91; (39) 90.	shipping, heavy loading in, (39) 748. silver lead disease affecting, (29) 845.
marketing—	snout beetles affecting, (26) 759.
and distribution, (34) 149.	sod v. tillage, (26) 45. sod mulch v. tillage, (30) 640, 642; (34) 148.
by parcel post, (36) 742. cooperatively, (20) 392; (37) 143.	spray injury, (38) 641.
in North Carolina, (33) 595.	spray schedule, (39) 140, 242,
McIntosh, characteristics, (28) 639.	Sprayed, arsenic on, (38) 04.
McIntosh, drought injury, (40) 849. Monilia affecting, (26) 849.	sprayed, arsenic on, (38) 54. spraying, (29) 436; (33) 439, 538; (36) 535; (37) 744; (38) 550; (40) 162, 837.
mulching experiments, (34) 833.	
new, description, (29) 436, 838; (31) 337; (32) 438,	dust v. liquid, (32) 551; (37) 832, 833, experiments, (27) 143, 439; (28) 47, 348, 436; (30) 640; (33) 45, 141, 648; (34) 146; (35) 39, 342; (36) 240; (37) 40, 242, 447, 647; (38) 551; (39) 343, 345, 348, 349, 548, 552, 651, 760, 865.
744; (35) 37.	experiments, (27) 143, 439; (28) 47, 348, 430; (28) 460; (28) 46, 460;
new varieties, (27) 144. nitrogen for, (39) 241; (40) 837.	342; (36) 240; (37) 40, 242, 447, 647; (38) 551;
nomenclature, Australian, (39) 844.	(39) 343, 345, 348, 349, 548, 552, 651, 760, 865.
Northern Spy seedlings, characteristics, (31)	III DIOSSOIII WILLI LODRICCO EXLIRICE. (31) 546.
440.	summer, (29) 146. with Bordeaux, (40) 746.
nursery, root systems of, (35) 142. odoriferous substances of, (26) 208.	with lime arsenate, (40) 164.
of colder parts of United States and Canada	stock and scion relations, (39) 541.
(26) 540.	stocks—
Georgia, peculiarities, (31) 440.	dwarf, (39) 347.
Germany, (33) 838. lower Seine regions, composition, (30) 16.	for, (33) 239; (39) 40, 645, 843, 864. Siberian crab. (39) 346.
New York, (29) 41.	Siberlan crab, (39) 346. storage, (26) 441; (29) 40; (32) 141; (36) 240; (38)
New York, (29) 41. orange rust of, (29) 547.	143, 241; (39) 310, 770; (40) 849.
oriental peach moth on, (39) 259, 261.	storage—
oriental peach moth on, (39) 259, 261, packing, (28) 237; (29) 838; (30) 41; (35) 838; (37) "8; (38) 246.	changes during, (39) 121. experiments, (33) 340.

Apples—Continued.	Apricot—Continued.
storage—continued. houses for, (22) 888; (38) 88.	stones— histological characteristics, (27) 112.
in peat dust, (29) 641.	hydrocyanic acid content, (27) 12.
sulphur spotting, (39) 856.	thrips, new species, (40) 853.
temperatures injurious to, (27) 413, 439.	tree disease, notes, (31) 539.

Edition -	prostrata as a green manure, (32) 423.
bacterial, (39) 151.	Arachnida—
description, (38) 650. notes, (34) 54.	of British Columbia, (39) 464. species injurious to man, (39) 768.
studies, (30) 749.	Arachnids—
kernel oil, analyses, (26) 504.	comparative physiology and morphology, (33)
kernels, microscopic identification, (28) 565.	553.
leaf and twig curl, notes, (36) 647.	injurious to orach, (29) 853.
Monilia blight, studies, (34) 351. pollen, frost resistance of, (29) 437.	relation to disease transmission, (30) 546. Arachniopsis albicans n.g. and n.sp., description,
rust, notes, (39) 850.	(39) 30.
rust, treatment, (40) 851.	Araeccrus fasciculatus, ses Coffee-bean wecvil.
scab or black spot, notes, (36) 845.	Aragallus—
seab or freckle, notes, (30) 537. seeds, oil content, (36) 803.	lamberti, absorption of barium chlorid by, (28) 527.
sour sap disease, notes, (34) 54; (36) 451.	spicatus, poisoning of sheep by, (31) 781.

Aralia-	Argas-Continued.
cordata, notes, (31) 140.	persicus, see Argas miniatus. spp., notes, (29) 563.
cordata, nuclein bases in, (33) 564. spp., intumescences in, (26) 545.	Arge salicis n.sp., description, (30) 60.
Araucaria— araucana (imbricata) and its resins, (40) 615.	Arginase—action on creatin, (35) 313.
forests of Chile, (32) 542.	determination in animal organism, (34),804.
Arbela tetraonis, description, (28) 753.	in plants, studies, (37) 204. preparation from fresh liver, (37) 112.
Arbor Day— for roads, (29) 695.	Arginetia indica anecting sugar cane roots, (55)
in Kentucky, (27) 195. in Porto Rico, (27) 899.	550. Arginin—
manual, (27) 598, 898; (31) 395, 495; (33) 495.	determination, (35) 415.
notes, (30) 196, 197. suggestions, (31) 792; (32) 495, 496.	determination in proteins, (26) 22; (37) 112. distribution in plants, (30) 129.
Arbor vitae	enect on plant growth, (20) 324.
Chinese, culture, (30) 346. leaf miner, notes, (33) 252.	enzymatic splitting in lupines, (39) 733. in chernozem soils, (35) 212.
A rboriculture—	grane leaves. (27) 731.
bibliography, (34) 435. in Spain, (33) 238.	hops, (32) 502. malt sprouts, (26) 24.
ornamental, notes, (29) 146.	soils, (27) 500,
treatise, (33) 537. Arbutin in—	stachys tubers and citrus leaves, (26) 107. metabolism, (38) 267.
leaves of Grevillea robusta, (27) 527. pears, (26) 327.	notes, (28) 29.
pears, (26) 327. Arceuthobium—	nutritive value, (38) 569. rôle in purin metabolism, (37) 265.
injurious to conifers, (39) 57.	Argulus foliaccus, notes, (38) 001.
oxycedri, notes, (31) 56. Archibuteo lagopus sanctijohannis, notes, (27) 355.	Argyna cribrasia on san, (31) 850. Argyresthia—
Archips—	aternatella, notes, (34) 450.
argyrospila— notes, (28) 450; (30) 157, 361; (32) 651; (40)	atmoriella, notes, (34) 553. conjugella, life history, (38) 261.
161.	conjugella, notes, (36) 457.
pupal instar, (34) 357. remedies, (31) 850; (34) 755; (35) 551; (37) 56.	illuminatella, notes, (34) 855; (35) 258. n.spp., descriptions, (33) 748.
studies, (27) 160; (28) 754.	thuiella, notes, (33) 252.
cerasivorana— natural control, (40) 62.	Argyrophylax albincisa, description, (36) 359. Argyroploce duplex, notes, (40) 456.
notes, (26) 856; (34) 752; (36) 856.	Arhar, culture experiments, (28) 633.
postvittanus, notes, (27) 155. rosaceana, notes, (28) 854; (35) 853.	Arion circumscriptus, feeding habits, (34) 458. Arisaema seeds, germination, (33) 29.
rosana, life history and habits, (30) 651.	Aristida—
rosana, life history and habits, (30) 651. rosana, notes, (35) 54. spp., notes, (27) 161.	adscensionis, analyses, (36) 334. adscensionis, studies, (38) 06.
Archytas—	pungens, culture and use, (33) 131. spp., analyses and digestibility, (27) 871; (32)
analis, parasitic on army worm, (34) 251.	167.
piliventris, notes, (29) 356. Arctia caja—	spp., roots of, (26) 535. Aristonetta, a good genus, (40) 161.
bacillary septicemia of, (29) 855.	Aristotelia—
notes, (30) 54, 855. parasites of, (31) 251.	salicifungiella, life history, (33) 655. sp., notes, (32) 556.
Arctomys bobac-	Arithmetic—
notes, (27) 454. relation to plague, (26) 252, 653.	agricultural problems in, (31) 793. agricultural, textbook, (30) 795.
susceptibility to pneumonic plague, (28) 180.	rural, textbook, (37) 95.
Arctostaphylos columbiana n.sp., description, (34) 336.	textbook, (36) 597. Arizona—
Arcyptera flavicosta, destruction by Coccobacillus	Station— financial statement, (27) 599; (29) 496.
acridiorum, (33) 154. Ardisia crispa, symbiosis with bacteria, (29) 30.	financial statement, (27) 599; (29) 496. notes, (27) 98, 896; (28) 195, 900; (29) 396, 697; (30) 796; (31) 300, 307; (33) 99,1900; (34) 198, 396, 495; (35) 95; (37) 700; (38) 299; (39) 95, 500, 694; (40) 98, 297.
Arduenna (Spiroptera) strongylina, notes, (28) 285.	697; (30) 796; (31) 300, 397; (33) 699,1900; (34) 198, 396, 495; (35) 95; (37) 700; (38)
Areca— catechu, culture in North Kanara, (34) 239.	299; (39) 95, 500, 694; (40) 98, 297.
nut mahali disease, treatment, (36) 48.	report, (32) 598; (33) 96; (35) 594; (39) 799.
nuts, secondary bases of, (31) 309.	299, (39) 95, 500, 095, (49) 95, 297, report, (32) 958; (33) 968; (35) 584; (39) 799. report of director, (27) 509; (29) 496. University, notes, (27) 98; (28) 195, 900; (29) 396, 607; (30) 796; (31) 99, 300, 397, 795; (32) 94, 395, 497; (33) 609, 900; (34) 306, 495; (35) 96, 596; (37) 700; (38) 299; (39) 95, 500, 694; (40) 90 27 405 607
anaberoga, description, (37) 657.	395, 497; (30) 796; (31) 99, 300, 397, 795; (32) 94, 395, 497; (33) 699, 900; (34) 396, 495; (35) 95,
collar rot, notes, (34) 50. diseases, notes, (36) 348; (40) 48, 845.	596; (37) 700; (38) 299; (39) 95, 500, 694; (40)
diseases, notes, (36) 348; (40) 48, 845. koleroga, notes, (34) 55, 644; (38) 351, 548. Arecain, chemical formula for, (31) 309.	98, 297, 495, 695. Arkansas—
Arenga saccharifera, culture and use, (32) 46.	river, low water in, (27) 115.
Arenivaga, new species, (40) 754.	Station, notes, (26) 494; (27) 696; (29) 300, 5eo, 497, 697; (30) 95, 796; (31) 197, 496; (32) 198.
Aressida annulicornis n.sp., description, (28) 162. Argas—	497, 697; (30) 95, 796; (31) 197, 496; (32) 198, 395, 694; (33) 399, 900; (35) 95; (37) 97; (38) 96; (39) 95, 197, 300, 399; (40) 297.
and spirochetes, notes, (31) 81.	Station, report, (40) 796.
miniatus— anatomy, (29) 58.	University, notes, (26) 494; (27) 300, 696; (20) 300, 396, 497, 697; (30) 95, 796; (31) 197, 496; (32) 198, 395, 694; (33) 399, 900; (35) 95; (36)
as affected by Roentgen rays, (28) 57.	(32) 198, 395, 694; (33) 399, 900; (35) 95; (36)
inheritance of spirochetal infection in, (27) 84.	694; (37) 97; (38) 96, 498; (39) 95, 300, 399; (40) 297.
notes, (26) 864; (27) 565, 762, 865; (31) 586; (39) 461, 768; (40) 287.	Armadillidium vulgare—
nympus, injection by, (26) 460.	as affected by Roentgen rays, (28) 57. notes, (27) 658; (31) 758.
relation to spirochetosis in fowls, (26) 684. remedies, (29) 58.	Armadillo, nine-banded, biology and habits, (29)
transmission of fewl pest by, (26) 890.	755. Armatella litseae, notes, (37) 652.

Armillaria—	Arsenates—
mellea- description, (30) 151; (32) 238.	effect on sugar cane roots, (38) 238.
development, (33) 130.	for oriental peach moth control, (40) 756. toxicity, (37) 759.
new hosts for, (33) 550.	Arsenic-
notes, (26) 345, 628; (27) 450; (29) 851; (32) 50, 657, 845; (33) 846; (31) 614; (35) 351,	absorption by green plants, (30) 130. acid, reduction to arsenious acid, (30) 801.
752; (40) 749. on nursery stock, (33) 744.	as a normal element of soils, (30) 321.
orchard trees in California, (32) 241.	biological decomposition, (32) 474.
pear, (40) 252. walnut, (39) 58.	effect on plant growth, (31) 325; (32) 121.
studies, (31) 246; (36) 751.	toxicity toward plants, (33) 327. tuberculocidal action, (35) 181.
symbiosis with Gastrodia elata, (27) 224. treatment, (30) 649; (33) 149; (36) 846.	grapes and wine, (26) 841.
root rot—	leaves, (29) 628.
notes, (40) 748. of citrus trees, (39) 152.	copper sprays, preparation, (40) 843. cumulative action in dipping, (34) 186.
on English walnut, (38) 152.	detection, (28) 804; (36) 203.
sp., notes, (31) 152. sp. on oaks, (34) 241.	detection— in bees, (36) 59.
spp. on forest trees, (40) 319.	11 water. (34) 410.
Army— baking, manual, (37) 63.	modified Marsh's test, (27) 409, determination, (28) 24, 410; (35) 207; (36) 300, 806;
biscuit, recipes, (34) 256. bread, notes, (26) 464.	(39) 113, 508, 715.
oread, notes, (26) 404. cutworm, 906 (Thorizagrotis auxiliaris.	determination in— baking powder, (27) 497; (29) 799.
rations, (40) 68, 362, 560, 564.	baking powder, (27) 497; (29) 799. dipping fluids, (27) 477; (30) 801. foods, (27) 613; (32) 298.
description and preparation, (29) 661.	fungicules and insecticules, (30) 416.
field service, scale for, (30) 169.	insecticides, (26) 21; (32) 296; (36) 299; (38)
food value, (29) 567. m Europe, (32) 562.	lead arsenate, (27) 504; (29) 797.
in Europe, (32) 562. in United States, (32) 459, 460 notes, (33) 165, 365.	organic matter, (37) 713.
worm—	shellac, (28) 310. solls, (27) 499; (28) 507.
baits, tests, (39) 361.	distribution in animals, (27) 180.
biology, (34) 455. control in Massachusetts, (33) 114.	development of corn. (33) 522.
worm, fall— life history and remedies, (29) 655.	nitrogen-fixing organisms of solls, (35) 515. nitrogen-fixing power of solls, (32) 720.
notes, (27) 559, 659; (28) 554; (29) 53, 353, 356, 652; (30) 154, 252, 656; (36) 254.	nitrogen transformation in soils, (30) 423,
652; (30) 154, 252, 656; (36) 254.	424. plants, (38) 628.
on granberry, (38) 159. studies, (34) 163; (35) 56.	soil hacteria, (38) 322, 428.
summary of information, (40) 263.	soils, (32) 730. sugar beets, (26) 225.
injurious to cranberries, (33) 352.	examination, (31) 509.
life history, (35) 854. life history and remedies, (38) 54. notes, (27) 155, 656, 659; (29) 252; (32) 153;	fixation in surface soils, (34) 421. in baking powders, (29) 866.
notes, (27) 155, 656, 659; (29) 252; (32) 153; (33) 58; (34) 158, 453, 494, 752; (35) 465; (36)	gelatin, (26) 464. hops, (38) 9. milk, (27) 677.
854.	milk, (27) 677.
on sugar cane in Mexico, (40) 57. outbreak in 1914, (35) 553.	orchard soils, (31) 720. parasitic or parasitized plants, (27) 830.
outbreaks in Canada, (35) 356.	plant kingdom, (28) 526.
outbreaks in Canada, (35) 356. parasites of, (34) 251. parasitized, food of, (35) 553.	plants, rôle, (37) 130. shellac, (26) 710.
polyhedral virus, (40) 255. remedies, (27) 434; (30) 456.	soils, (30) 423.
semitropical, notes, (28) 654.	sulphured food products, (39) 206.
studies, (35) 56.	vegetables, (27) 260; (32) 628.
wheat-head, notes, (26) 59; (28) 100. Arnica montana, hydrocarbons in, (20) 107.	on sprayed fruits and vegetables. (38) 54.
Arracacia esculenta, analyses, (31) 863.	tobacco, (31) 715. vegetables, (37) 280; (32) 628. insecticidal value, (34) 60; (37) 559. on sprayed fruits and vegetables, (38) 54, polsons, use of fungicides with, (38) 156.
Arrak, judging, (26) 209. Arrhenal, use against Texas fever, (36) 384.	for. (33) 110.
Arrhenatherum— avenaceum—	sprays for weed eradication, (40) 328.
notes, (27) 35.	sulphid, larvicidal value, (34) 359. use against—
relation to oat mildew, (35) 651. elatius—	foot diseases in horses, (29) 783.
dissemination by insects, (27) 47.	surra, (29) 883. water-soluble, determination in lead arsenate,
seeding on ranges, (30) 35. Arrhenophagus—	(36) 715; (37) 616. white, dosage for sheep, (27) 683.
chionaspidis, notes, (26) 152.	Arsenical—
n.spp., descriptions, (35) 365. Arrowhead tubers, sugar in, (30) 63, 502	compounds, bactericidal action, (39) 488. dip testor, (35) 678.
Arrowroot—	dips-
bagasse, analyses, (30) 565.	alkali content, (28) 411. for cattle ticks, (27) 77, 84, 163; (29) 287; (32)
culture experiments, (31) 226. culture in Philippines, (40) 231.	274; (33) 679. methods of analysis, (31) 115.
examination, (29) 361.	notes, (30) 778.
fertilizer experiments, (33) 227. insects affecting, (30) 752. production in St. Vincent, (39) 835.	oxidation, (26) 174; (31) 776; (33) 478, 680; (38) 585.
production in St. Vincent, (39) 835. Starch content, (35) 108.	preparation, (26) 382; (29) 585; (31) 776; (32)
varieties, (30) 434.	778. rendering harmless, (27) 899.
Arsenate— formation in dipping tanks, (31) 483.	tick-killing properties, (29) 886.
of iron, insecticidal value, (27) 755.	treatment, (28) 382.

Arsenical—Continued.	Artichoke—
injury through bark of fruit trees, (36) 849.	diseases, notes, (38) 41.
insecticides, chemistry of, (28) 308.	foliage, digestibility, (32) 258.
salts, analyses, (28) 309. spray injury, prevention, (31) 154.	globe, culture and uses, (38) 41. globe, insects affecting, (40) 57.
sprays—	Jerusalem—
effect on bees, (32) 244.	as food, (36) 561; (39) 67.
effect on color of apples, (28) 115.	in France, (10) 35.
spreaders for, (38) 858. use against wild morning-glory. (38) 140.	inulin in, (39) 524, 732.
use of cactus solution in, (32) 557.	notes, (26) 362. moth, notes, (33) 554.
Arsenicals—	sclerotinia diseases, (40) 49.
as antiparasiticides, (32) 471.	sunflower grafts, studies, (39) 615.
effect of soap on settling, (29) 354.	Artichokes—
for plant protection, (30) 236.	analyses, (31) 433. culture, (27) 32.
for poison haits, (39) 361. for weed control, (40) 429.	culture, (27) 32.
production. (33) 876	culture and use, (40) 763.
root injury by, (40) 449. substitutes for, (29) 758.	culture in Gironde. (30) 738.
substitutes for, (29) 758.	culture experiments, (38) 531; (32) 132; (37) 132. culture in Gironde, (30) 738. insects affecting, (33) 856; (38) 41.
toxicity and use, (31) 851. toxicity, factors affecting, (36) 751.	v. politices for fortige, (51) 455.
Arsenious acid—	variation in, (37) 342.
detection in dips, (31) 483.	Artocarpus integrifolia, notes, (30) 525.
determination, (28) 804.	Artona walkeri, notes, (33) 856. Arum, culture experiments, (30) 229.
effect on sugar cane roots, (38) 238.	Arundinella setosa, notes, (26) 361.
Arsenious oxid— as an alkalimetric standard, (34) 312.	Asafetida, lead number, (27) 499.
as standard in iodimetry, (40) 600.	Asal fly, notes, (27) 53.
preparation and testing, (39) 507.	Assarum europaeum, notes, (27) 851.
Arsenito—	Asbestos stopper for use in distillation, (38) 203. Ascariasis—
of zinc as a substitute for arsenate of lead, (30) 53.	in horses and swine, (35) 489.
oxidation in cattle-dipping tanks, (26) 382.	in horses, treatment, (40) 586.
solutions, determination of strength, (32) 207.	Ascarids—
Arsenites, see Paris green.	affecting sheep in Algeria, (31) 86.
Arsenobenzol—	chemistry and toxicology, (27) 290.
bactericidal action, (39) 488. in glardiasis, treatment, (40) 884.	development, (26) 279. in dogs, studies, (40) 186, 187.
use against equine influenza, (30) 385.	in horses, treatment, (26) 588.
Arsenophenylglycin, use against dourine, (26) 881;	remedies, (37) 578.
(27) 284.	toxic product, studies, (40) 84.
Arsphenamin, effect on complement and antibody production, (40) 287.	toxins of, (30) 278.
Art in the home, (26) 299.	Ascaris— . canis and A. felis, comparison, (37) 163.
Artemisia—	equorum extracts, effect on blood coagulation,

description, (33) 447. leaf invasions by, (34) 647.	coagulans n.sp., description, (34) 78.
longevity, (36) 50. migration in host tissues. (29) 449.	as affected by acids, (10) 991. as test organism for disinfectants, (20) 903.
longevity, (36) 50. migration in host tissues, (29) 449. notes, (29) 49, 848; (31) 346, 644, 746, 843; (33) 348; (34) 247, 648, 747; (37) 755; (40)	causing broncho-pneumonia in calves, (39)
53, 251, 348.	290. coli communis—
pear stocks resistant to, (36) 51. relation to aphids, (34) 452.	action on glucose and mannitol in presence
relation to apple collar rot, (34) 157. studies, (29) 348, 649; (34) 247; (35) 351, 548,	of peptone, (38) 709. in milk, (32) 577.
studies, (29) 348, 649; (34) 247; (35) 351, 548, 848; (36) 50, 351; (40) 746.	in swine, (40) 784. in water supplies, (31) 718.
transmission by aphids, (37) 151, 157.	organism resembling, in condensed milk,
transmission by bees, (36) 59. treatment, (36) 347.	(26) 81. relation to broncho-pneumonia, (36) 384.
anthracis as affected by— serums and leucocytes, (26) 175.	survival of pasteurization by, (32) 775.
ultraviolet rays, (31) 379.	destruction by electricity, (35) 176.
anthracis— detection in cerebrospinal fluid, (31) 578.	detection in water, (28) 509. determination in ice cream, (32) 415; (34)
effect on sheep, (29) 582.	165.
hemolytic powers, (31) 878. notes, (29) 378.	determination in water, (35) 287; (37) 188. Endo medium as a test for, (34) 167.
spores, resistance to heat, (35) 487. symptomatici and allied organisms, gas pro-	freezing, (40) 181. from horse, cow, and man, (36) 379.
duction by, (36) 880. symptomatici, fermenting capacity, (27)	hydrogen-ion concentration by, (34) 524.
182.	importance in judgment of water, (34) 389. in butter. (31) 576.
apiovorus n.sp., description, (31) 542. apiovorus n.sp., notes, (34) 244.	in butter, (31) 576. eggs, (27) 61; (31) 571.
asteracearum n.sp., description, (27) 547.	fresh and decomposing manure, (39) 23. milk, (40) 376.
atrosepticus— and B. melanogenes, relation, (39) 148.	milk, significance, (37) 874. itinerary in butter manufacture, (39) 78.
description, (36) 648. notes, (40) 844.	longevity, (26) 781; (38) 389, 488. notes, (26) 846; (27, 751; (38) 351.
aurantinus n.sp., description, (34) 78.	on coconut paim, (34) 241.
avisepticus-	on green vegetables, (40) 658. relation to coconut bud rot, (34) 442; (35)
affecting man, (39) 186. studies, (40) 685, 882. toxins of, (39) 892.	353, 850.
toxins of, (39) 892. var. in fowls, (32) 783.	relation to diarrhea in calves, (26) 381. relation to slime formation in soils, (29) 723.
baccarinii, organism resembling, (30) 353.	thermal death point, (39) 78.
bipolaris septicus, (40) 183. bipolaris vars., notes, (28) 281.	cuniculicida, isolation from house fly, (38) 362. cyanogenes, relation to blue milk, (32) 775.
bombycis, relation to septicemia in silkworms, (30) 54.	cypripedii n.sp., description, (26) 650. delbruecki, use in bread making, (33) 864.
botulinus—	de Loutraz, studies, (40) 552. dianthi (?) on sugar beets, (33) 743.
development in corn and apricots, (37) 165. development in vegetable medium, (33) 866.	diphtheriae, destruction by periodol, (39) 80.
effect of heat on. (40) 558	dysenteriae— as affected by metamorphosis of house
isolation, (39) 783. relation to forage poisoning, (37) 179; (38) 383, 384; (39) 387.	flies, (29) 357.
383, 384; (39) 387. studies, (40) 176.	destruction by periodol, (39) 80. enteritidis—
DOVISODTICUS, notes. (28) 284.	accidental infection by, (36) 350. as a cause of infectious diarrhea in calves,
Bridré-Sívori, affecting pigs, (40) 683. bronchicanis, studies, (27) 187.	(35) 488.
Dronenise Deletis	occurrence in calves, (27) 289. relation to croupous enteritis in cattle, (28)
lesions produced by, (34) 480.	886.
filterability, (33) 483. lesions produced by, (34) 480. notes, (27) 782; (30) 579. relation to dog distemper, (28) 682; (29) 682.	spontaneous occurrence in mice, (26) 176. studies, (33) 178. erysipelatis, detection after vaccinating, (29)
Suidles, (31) 479; (39) 289.	176.
bulgaricus— as a starter for lacto, (30) 61.	erysipelatis suis
dried cultures of, (31) 773.	effect of mixed and secondary infection in, (26) 185.
effect on milk, (39) 486. effect on typhoid bacillus in milk, (27) 176.	heat resistance of precipitingeens. (29) 882.
in Emmental cheese, (31) 477.	studies, (27) 384. types, (29) 882.

Bacillus-Continued.	Bacillus-Continued.
erysipelatis, toxins contained in, (28) 676.	paratyphosus B—continued
extorquens— decomposition of silicates by, (31) 121.	in pigeons, (34) 83. in swine, (40) 784.
n.sp., notes, (29) 316.	notes, (30) 786.
n.sp., notes, (29) 316. faecalis alkaligenes, studies, (31) 479. fornationus p.sp., description, (20) 851; (40) 159	studies, (33) 178.
farnetianus n.sp., description, (26) 851; (40) 159. fluorescens liquefaciens, notes, (28) 473. gallinarum, studies, (40) 685.	paratyphosus—
gallingrum studies. (40) 685.	relation to abortion in mares, (31) 381. studies, (39) 587.
	perfringens—
gortynae, notes, (30) 551. gunmificans, notes, (28) 651. histolyticus, biochemistry, (39) 887.	notes, (39) 890.
gummilicans, norcs, (28) 551.	studies, (38) 503, 504.
hoplosternus n.sp., description, (38) 162.	pertussis, lesions produced by, (34) 480. pestis, development in bedbugs, (33) 747.
ichthyosmius n.sp., description, (37) 686. iviae n.sp., studies, (29) 845.	pestis, longevity in fleas, (33) 749.
Koch's, method of entering the body, (29) 884.	petroselini n.sp., description, (35) 454. phlei, notes, (28) 481.
Inctis acidi, studies, (40) 377.	phytophthorus—
lactis erythrogenes, effect on milk, (26) 775;	notes, (31) 641; (40) 847.
(30) 411. lactis fermentens, studios, (29) 776.	studies, (39) 456.
lactis viscosus, notes, (27) 474.	pollacii n.sp., description, (26) 851; (40) 159 poncei n.form, description, (40) 164.
lathyri—	Preisz-Nocard-
n.sp., relation to sweet pea streak disease, (29) 352	diagnostic value, (29) 281.
relation to sweet pen streak disease, (32) 446.	from equine, bovine, and ovine abscesses, (35) 574.
studies, (33) 547; (37) 155.	notes, (28) 182, 782.
levans, notes, (26) 563.	prodigiosus—
liparis parasitizing gipsy moth, (38) 159. lipolyticus—	destruction of paraffin by, (32) 523. notes, (28) 241.
pathogenicity, (39) 289.	relation to rubber spotting, (29) 451.
studies, (40) 184.	protous vulgaris, notes, (29) 64.
lymantriae— destructive to gipsy moth, (30) 54.	pseudopyogenes lactis in milk, (33) 115. pseudotetanicus, death rate as affected by tem-
parasitizing gipsy moth, (38) 159	perature changes, (40) 313.
lymphangiticus, notes, (31) 478.	pullorum, relation to fowl typhoid bacillus.
mallei— as affected by calcium hypochlorite, (40)	(32) 478.
478.	pyocyaneus— effect on denifrification, (27) 424.
morphology and biology, (31) 579.	in pupae and imagines of infected house
notes, (28) 887.	flies, (26) 61.
mangierae n.sp., description, (34) 447. manihotis, notes, (35) 245.	in swine, (40) 784. respiration, (31) 827.
megatherium, aerotropic growths, (27) 829.	pyogenes—
melanogenes—	affecting pigs, (30) 484.
notes, (27) 446; (32) 239, 544. treatment, (29) 549.	relation to contagious abortion, (29) 80. relation to eye disease in cattle, (37) 691.
melitensis—see also Bacterium melitense, and	suppuration due to, (37) 276; (38) 585.
Micrococcus melitensis.	pyrameis 1 and 11, notes, (30) 551.
studies, (39) 289. melolonthae—	radicicola—sec also Nodule bacteria. cultures, preparation, (39) 723.
relation to septicemia in cockchafers, (30)	fixation of nitrogen by, (29) 629, 733.
54.	groups of, (33) 823.
studies, (38) 162. melonis as affected by cold, (34) 538.	growth as affected by hydrogen-ion concen- tration. (39) 26.
minimus mammae, hygienic importance, (33)	tration, (39) 26. in soils, (29) 423, 515.
175.	isolation from soils, (32) 727; (33) 121.
Morgan's, in flies, (30) 757. morulans—	nitrogen assimilation by, (33) 426. notes. (26) 521: (39) 338.
n.sp., description, (38) 250.	notes, (26) 521; (39) 338. of field peas, (33) 329.
n.sp., description, (38) 250. nitrate reduction by, (37) 544 musac, description, (31) 715. musac, notes, (20) 345; (27) 50, 449.	of soy beans, studies, (33) 134; (36) 848. specialization of forms, (29) 733. studies, (32) 33, 727; (35) 729; (39) 116. testing cultures of, (29) 30.
musae, notes, (20) 345; (27) 50, 449	studies. (32) 33. 727; (35) 729; (39) 116.
mycolues, notes, (20) 747.	testing cultures of, (29) 30.
n.spp., descriptions, (26) 581; (28) 628. n.spp. in Brindra cheese, (33) 278.	radiobacter in Java soils, (30) 218. Reading, in wounds, (40) 679.
n.spp. on orchids, descriptions, (40) 159.	rhisiopalnile suis, relation to polyarthritis in
necrophorus—see also Necrobacillosis.	sheep, (31) 286.
uflecting cuttle, (30) 881. discusses, puthology, (30) 590.	sheep, (31) 256. saccharalis n.sp., description, (35) 505.
in swine, (40) 784.	
notes, (28) 285; (33) 774.	septicaemiae ranarum n.sp., notes, (30) 851. septicus insectorum, notes, (32) 62.
necrosis	smegmatis, acid-produess of strains, (38) 485.
lesions, (39) 683. organism resembling in rabbits, (29) 677.	solanacearum—see also Bacterium solanacea- rum.
nicotionae and B. solanacearum, identity, (30)	description and treatment, (29) 847.
541.	notes, (26) 649; (27) 854; (28) 243, 446; (29)
oedematis maligni, notes, (30) 890.	426; (30) 48, 749, 847; (31) 127; (32) 00, 230: (39) 550, 551: (40) 348.
of Group IV, studies, (31) 479.	studies, (27) 650.
oedematous, pathogenicity, (37) 377. of Group IV, studies, (31) 479. of Schmorl, studies, (28) 676; (29) 478. oleae, freatment (27) 251.	rum. description and treatment, (29) 847. notes, (26) 649; (27) 854; (28) 243, 446; (29) 423; (30) 48, 744, 847; (31) 127; (32) 50, 239; (39) 550, 551; (40) 348. studies, (27) 650. variability, (29) 136. virulence against Nicotiana, (33) 446.
omnivorus, notes, (40) 844.	virulence against Nicotiana, (32) 446. solaniperda, notes, (26) 846.
ovisepticus, studies, (38) 887.	solanisaprus, notes, (36) 250.
paratuberculosis, notes, (30) 583.	sorghi (?) on Sudan grass, (33) 851.
paratyphoid equine, studies, (39) 492. paratyphoid-like, from a dog, (26) 280.	B. alvei, and B. megaterium, identity, (36)
paratyphosus B—	380.
nnomalous strain of, (32) 678. food poisoning by, (34) 503.	studies, (37) 853. toxin of, (38) 466.

Bacillus—Continued. sp. affecting garle, (30) 449.	Bacillus—Continued. welchii—continued.
spongiosus, notes, (28) 746.	toxin, action of antiseptics on, (39) 185.
sporogenes	toxins of, (38) 378, 581, 783.
as an indicator of manurial pollution in	Bacon-
milk, (34) 272	black pigment areas in, (35) 376. curing and marketing, (29) 773. curing, cooperative, in England, (27) 676.
biochemistry, (38) 483. detection in milk and water, (33) 875.	curing and marketing, (29) 773.
studies, (38) 503, 504.	curing on the farm, (27) 279; (30) 316, 373.
spp., absorption in intestinal canal, (28) 882.	factories, cooperative—
spp., ammonifying power, (31) 317. spp., distribution by flies, (28) 756.	in Denmark, (27) 590. in Victoria, (27) 373.
spp., distribution by mes, (28) 756.	in Victoria, (27) 373.
spp., notes, (26) 847, 880. spp., occurrence in sugar, (26) 505.	industry in New South Wales, (28) 874. price in England, (38) 90.
spp., on vegetables in Ontario, (37) 150.	wrapped cured, inspection in Texas, (29) 61.
spp., physiological studies, (27) 226.	Bacteria—
spp., production of toxins by, (26) 184.	absorption in intestinal canal, (28) 882.
spp., relation to— foul brood of bees, (27) 563.	absorption of congo red by, (29) 528. acid agglutination, (27) 384.
white scours in calves, (26) 286.	acid-fast, anaphylaxis from, (30) 151.
subtilis—	acid-fast, studies, (33) 769. acid-rennet, in udder of cows, (33) 175.
in condensed milk, (29) 778.	acid-rennet, in udder of cows, (33) 175.
in conjunctival sac of horses and bovines, (26) 176.	action of blood from different species on, (40) 236, action of dyes on, (39) 412.
isolation from cheese, (26) 479.	activity during infection, (26) 174.
potassium requirements, (39) 619.	activity in forest soils, (29) 325.
proteolytic activity, (35) 201.	aerobic spore-bearing nonpathogenie, studies,
rôle in utilization of organic compounds by	(35) 378.
plants, (37) 223. suipesticus—	agglutinating, biochemical activity, (38) 191. anaerobic, see Anaerobes.
effect on rabbits, (29) 288.	and algae, symbiosis, (28) 31.
immunity of rabbits to, (26) 184.	and plants, symbiosis between, (36) 632.
suipestifer—	and tropical plants, symbiosis, (28) 35.
agglutinins for, in hog cholera serum, (36) 280.	as affected by—
notes, (28) 183; (40) 783.	cold, (34) 538. freezing, (40) 180.
studies, (39) 188.	illuminating gas, (39) 632
voldagsen, notes, (29) 883. suisepticus—see also Bacterium suisepticus.	illuminating gas, (39) 632 metamorphosis of house flies, (20) 357
suisepticus—see also Bacterium suisepticus.	pressure, (38) 581.
significance in hog cholera, (31) 680. synxanthus in milk, (34) 78.	radioactive minerals, (27) 826. radioactivity, (30) 524.
tabificans—	radium emanations, (31) 821.
description and treatment, (28) 847.	spices, (35) 557; (38) 469. sterilized soils, (28) 324.
notes, (30) 47.	sterilized soils, (28) 324.
treatment, (31) 243. tetani, studies, (39) 389.	tobacco smoke and methyl iorlid vapor, (39)
thuringiensis n.sp., notes, (35) 253.	527. ultraviolet rays, (26) 431; (36) 520.
tracheiphilus—	volatile conifer products, (32) 615.
notes and treatment, (28) 746. studies, (27) 45; (36) 249. transmission by insects, (35) 546.	as an index to age of butter, (31) 576.
STUDIES, (27) 45; (36) 249.	as cause of strawberry-like odor in milk, (26) 371.
tuberculosis, see Tubercle bacilli.	Bulgarian group, morphology and biochemistry (35) 10.
tuberculosis ovis, notes, (28) 182.	butyric-acid-forming, in spoiled flour, (26) 63.
tuberculosis ovis, notes, (28) 182. tubilex n.sp., description, (26) 847.	carbohydrate decomposing, detection in soils,
typhi-exanthematici, isolation from body louse,	(31) 313.
typhi gallinarum alcalifaciens—	cellulose-destroying, characteristics, (29) 817. cellulose-digesting, isolation, (31) 827.
biochemical and agglutinating properties,	changes in the animal hody (31) 877
(38) 788.	chemical action of, (30) 10.
studies, (30) 385.	chemistry of, (32) 78.
typhi suis as a cause of meat poisoning, (32) 84.	election and collulose in, (36) 501.
as affected by metamorphosis of house flies,	chemical action of, (30) 10. chemistry of, (32) 78. chitin and cellulose in, (38) 501. classification, (26) 276; (37) 220, 819. classification and nomenclature, (40) 521.
(29) 358.	coli-aerogenes, differentiation, (31) 136; (37) 506.
as test organism for disinfectants, (29) 803.	coll group, selective action of media on, (27) 177.
culture media for, (40) 677. destruction by periodol, (39) 80.	coli group, variation, (27) 177.
destruction in sour milk, (40) 476.	colon type— in bovine feces, (32) 175.
longevity in water, (38) 488.	in oat hay, (36) 280, 580.
occurrence on vegetables, (26) 661.	in surface water, (36) 284.
persistence in pupae and imagines of house flies, (26) 251.	on grains, (33) 631.
vaccines, studies, (40) 286.	colon-typhoid, affecting birds, (40) 685. counting, (33) 82.
viability in ice cream, (34) 256. viability in milk, (26) 776. viscosus-panis, studies, (40) 360.	counting in tomato products, (39) 13.
viability in milk, (26) 776.	cultures, tests, (32) 320.
Viscosus-panis, stridies, (40) 360.	death rates as affected by temperature changes,
voldagsen— and B. suipestifer, relationship, (31) 87.	(40) 313. decomposition of silicates by, (29) 316.
as cause of meat poisoning, (32) 84.	denitrifying, physiology, (27) 424.
notes, (31) 680.	denitrifying sulphur, physiology, (28) 35.
organism resembling, in man, (29) 882, 883, relation to hog cholera, (28) 183; (29) 482;	destruction—
(32) 83.	by leucocytes, (27) 882.
vulgare, penetration of egg shells by, (29) 765.	by leucocytes, (27) 882. in milk, (28) 675. of cellulose by, (26) 825; (28) 627.
welchii	of mice and rats by, (26) 579.
and blackleg bacillus, resemblance, (38) 587	of mice and rats by, (26) 579. of paraffin by, (32) 523.
antitoxin for, (38) 379. cultures, hemolysis, (39) 580.	with hydrocycnic acid gas, (35) 53.
in butter, (31) 576.	determination in— cream, (34) 612.
in pigeons, immunization, (37) 781,	ice cream, (34) 165; (38) 75.
studies, (38) 483, 503, 504.	meat, (31) 854.

Bacteria—Continued. development as affected by radioactivity, (28)	Bacteria—Continued. nitrogen-fixing—continued.
731.	potash requirements, (27) 226 preparation, (32) 433.
diastase and invertase activity, (36) 31. dissemination by flies, (27) 58; (28) 356; (30) 658. dissemination by roaches, (30) 156.	nitrogen metabolism, (39) 110. nodule—
distribution by cleam separators, (32) 268. distribution in New York soils, (26) 719.	as affected by manganese, (34) 31. as affected by phosphorus, (37) 828.
effect on— availability of phosphates, (28) 815.	classification, (32) 33. for legumes, (35) 322.
catalase production in milk, (29) 717. cycle of hog cholera, (31) 680.	forms of, (32) 327. of Leguminosae, (32) 727.
fermentation of tea, (32) 111. gram size and moisture content of soils, (29)	physiological studies, (32) 727. relationships among, (33) 823.
20. milk held at low temperature, (31) 373.	studies, (36) 517. testing cultures of, (29) 30.
nitiogen content of soils, (31) 731. phosphoric soild in soils, (26) 817; (31) 721.	nomenclature and classification, (39) 124, 82 of enteritidis group, variability, (28) 780.
sowage, (34) 591. soil phosphorus, (36) 515. solubility of potash and phosphoric acid,	fresh and decomposing manure, (39) 28. infectious diseases, (40) 180, 284.
(29) 315. soluble phosphorus of manures, (26) 723.	root nodules of legumes, (26) 824. udder and genital organs of the cow, (39) 388.
fat splitting by, (2n) 370. fecal, determination, (2n) 161.	on green vegetables, (40) 658. oxidation of manganese by, (32) 514. parasitic on Elodea leaves, (26) 552.
forniation of— calcium carbonate by, (26) 618.	parally phoid-enterthidis— cause of fish poisoning, (34) 459.
creatinin by G33 725.	differentiation, (**) 2-1. studies, (37) 275, 660, 781.
gas-producing, detection, (34) 732. gas-producing, in milk, (26) 576. gas production by, in raw and pasteurized milk,	pathogenic— conservation by flies, (30) 552.
(37) 874. green fluorescent, of maple sap, (26) 825.	in candy, (34) 365. review of investigations, (28) 178.
growth in— arsenic solutions, (35) 281.	persistence and vitality on alfalfa seed, (20) \$20.
protein-free media, (39) 888. raw and pusteurized milk, (36) 475. sterilized and unsterilized soil decoctions,	production of— humus by, (38) 329.
(28) 329.	hydrocyanic acid by, (30) 802. pioteolytic, of man and animals, (26) 581
halophytic and lime-precipitating, notes, (33) 630. hematoxins and antihematoxins of, (32) 78	pure-line concept, (36) 826. purple sulphur, physiology of, (31) 32.
hemophilic, growth, (30) 668. hemorrhagie septicenna group, (40) 685.	reducing and oxidizing properties of, detection, (26) 201. relation to—
identification, (27) 381. immunity of plants to, (33) 740.	heet blight, (34) 350.
importance in digestive processes, (31) 772. in alimentary canal of fleas, survival. (31) 353.	citrus gummosis, (29) 247. congulation of lates, (25) 331. coconut hud rot, (27) 847. humus and fertilizers, (28) 727. iodin compounds, (20) 123
cheese, studies, (27) 284. Don curd, (26) 779.	coconut hud rot, (27) 847. humus and fertilizers, (28) 727.
flesh of normal slaughterhouse animals, (26)	odin compounds, (29) 133. organic soil constituents, (29) 817.
house files, (26) 251. intestinal tract of calves, (35) 282.	plant diseases, (27) 41; (31) 745. soils, (27) 728. wilt diseases, (29) 243.
milk, see Milk. muscles, (26) 176.	resistance to—
normal udders, (27) 280; (28) 275. old eggs, (26) 108.	disinfectants, (26) 478. germicides, (36) 177; (37) 176.
prepared feeding stuffs, (32) 75. soils, see Soil bacteria. Stilton chass. (32) 879	respiration in soils, (27) 122. review of investigations, (30) 11. relain
Stilton cheese, (28) 879. water, see Water. intestinal, effect on purins, (33) 263.	rôle in— cheese tipening, (27) 74; (31) 477. reducing wine acidity, (35) 113.
intestinal, relation to diet, (40) 807. intracellular digestion, (36) 379.	slinge fermentation, (36) 802. soil fertility, determination, (26) 123.
invasion of animal parasites by, (28) 681. killed by heat, investigations, (31) 183.	root tubercle, specialization of forms, (29) 733 saprophytic, relation to animal life, (28) 570.
legume—	sensitized and nonsensitized, immunization with, (37) 780.
and nonlegume plants, symbiosis, (37) 819. behavior in acid and alkali media, (37) 422.	serum-grown, use in producing immune serum (35) 679.
fixation of nitrogen by, (20) 629.	sewage, relation to shellfish pollution, (27) 212 slime-forning, in milk, (29) 580.
limitation of in soils, (29) 122. lipolytic power on esters and fats, (29) 177.	spore-forming— function in soils, (35) 523
micro-calorimeter for, (30) 66. microscopic examination, (32) 578.	in soils, (36) 517. of the appary, (37) 59.
morphology and physiology, (26) 276. nitrate-reducing, (27) 226; (31) 324.	staining, inhibitory action of serum, (37) 478. stimulation by polyonous substances, (27) 131.
nitrilying— action of oligodynamic elements on, (33) 422.	storage of oxygen by, (28) 329. studies, (27) 780. sulphyr physiology, (28) 728
in sand cultures, (27) 634. rôle in decomposition of manure, (35) 426. nitrogen collecting, handbook, (29) 824.	sulphur, physiology, (28) 728. sulphur, physiology and distribution, (33) 23. surviving pesteurization, (29) 73; (32) 775.
nitrogen-fixing— action of oligodynamic elements on, (38) 428.	symbioss— in Rubiaceae, (32) 327.
as affected by manganese, (33) 820. in Rubiaceac leaves, (27) 225.	with Ardisia crispa. (29) 30.
of manure, (38) 27. physiology and biology, (38) 426, 427.	with plants, (20) 545. treatise, (27) 575; (29) 422; (31) 80. use against field mice, (31) 57.

528 31—26†——5	

Baking powder—	Banana—Continued.
Baking powder— albumin in, (29) 866. alum, use, (26) 564. analyses, (33) 461; (36) 662. as learning agents, (23) 66	leaf— diseases, notes, (38) 651.
analyses, (33) 461; (36) 662.	diseases, notes, (38) 651. roller, studies, (26) 857.
as leavening agents, (33) 66.	spot disease, notes, (36) 347. meal—
analyses, (33) 461; (36) 662. as leavening agents, (33) 66. egg albumin in, (32) 356, 762; (36) 561. examination, (29) 866; (30) 667; (31) 760; (40) 412, 508, 658, 712. notes, (32) 300.	analyses, (34) 256; (40) 173.
508, 658, 712.	analyses and digestibility, (28) 464.
notes, (32) 300. studies, (35) 802, 860.	as substitute for flour, (33) 361. digestibility, (30) 62.
Baking soda, effect on vitamin content of bread, (36)	for pigs, (29) 572.
465.	moth, biology and remedies, (38) 59.
Baking, temperatures for, (34) 69; (35) 268. Bakli, notes, (29) 443.	Panama disease— studies, (37) 843.
Balance, automatic, for metabolism experiments,	treatment, (35) 153. root borer, see Cosmopolites sordidus.
(33) 167.	root borer, see Cosmopolites sordidus.
Balanimus—see also Chestnut weevils. caryae, notes, (38) 762.	root disease, studies, (34) 50. rot in India, (35) 458. rot, notes, (36) 449.
caryae, studies, (38) 157.	rot, notes, (36) 449.
proboscideus, notes, (26) 753.	skins, analyses, (38) 626. stalks, analyses, (38) 626.
spp., notes, (40) 259. Balanitis in sheep, (29) 783.	stalks as source of potash, (36) 820.
Balata, harvesting and preparation, (27) 542. Balclutha punctata, life history, (35) 553.	starch, studies, (31) 828.
Ball bearings, history and use, (31) 487.	Trinidad disease, description, (31) 745. water tily as a duck food, (30) 545.
Balloon—	weevil, notes, (36) 158; (37) 161.
ascensions, sounding, (27) 316.	wilt or Panama disease, studies, (38) 757.
experiments, (31) 213. Balloons—	Bananas— acidity, (32) 110: (37) 714.
use in meteorology, (35) 618.	acidity, (32) 110; (37) 714. analyses, (26) 68; (32) 761.
use in upper air exploration. (30) 416.	analyses and lood values, (39) 471.
Ballovia cistipennis n.g. and n.sp., notes, (27) 558. Balsa wood—	and banana flour, composition, (34) 460. as food, (26) 563.
properties, (35) 241. survey in Central America, (40) 542.	as host of Mediterranean fruit fly, (34) 655.
survey in Central America, (40) 542.	ash analyses, (29) 861. bacteriological studies, (28) 564.
Balsam— bark, use for paper specialties, (36) 417.	bagworm affecting, (26) 857.
bark, use for paper specialties, (36) 417. Canadian volume tables, (26) 443.	breaking of pseudostems, (27) 143.
fir, clearing out, (40) 842.	coconut scale affecting, (30) 157. commercial products from, (32) 854.
fir, clearing out, (40) 842. fir, growth in Adirondacks, (38) 847. fir, reproduction by layering, (28) 344. methods of analysis, (27) 205. plant louse, see Mindarus abietinus. plants as affected by vaseline oil, (28) 825.	composition and culinary properties. (32) 253.
methods of analysis, (27) 205.	composition and culinary properties, (32) 258. cooking, (26) 260. culture, (31) 48; (32) 45; (38) 43; (40) 863.
plant louse, see Mindarus abletinus.	culture, (81) 48; (32) 45; (38) 43; (40) 863. culture—
reproduction, (39) 145. Balsamorrhiza sagittata, resin secretion, (39) 224.	and uses, (28) 743.
Balsamorrhiza sagittata, resin secretion, (39) 224. Bamboo—	experiments, (27) 143; (28) 142; (38) 845; (40)
as source of paper pulp, (27) 647; (28) 645.	339. in Fiji, (29) 642.
borer, notes, (34) 754.	in Guam, (30) 41. digestibility, (26) 563.
borer, shot-hole, notes, (29) 458.	digestibility, (26) 563. dried—
culture experiments, (34) 232. disease, description, (36) 251.	analyses, (29) 361.
grass, analyses, (30) 565.	analyses, (29) 361. studies, (34) 256.
grass as forage crop, (38) 827. method of working, (39) 246.	Surinam, food value, (26) 68. drying in Hawaii, (39) 208.
notes, (29) 330.	effect on composition of urine, (31) 761.
of Andes region of South America, (34) 742. Philippine, (40) 745.	fertilizer experiments, (37) 215.
propagation and description, (38) 751.	for livestock, (27) 171. fumigating with hydrocyanic acid gas, (29) 234.
scale, soft, in California, (35) 358.	nandbook. (30) 741.
seed, analyses, (29) 463. smut in United States, (36) 653.	Hua Moa variety, tests, (38) 740. insects affecting, (27) 453, 857; (39) 557; (40) 453. nematodes affecting, (36) 347.
studies, (30) 239.	nematodes affecting, (36) 347.
Banana—	notes, (30) 345.
anthracnose, notes, (29) 547. blackhead, notes, (40) 750.	nutritive value, (36) 863; (39) 872; (40) 67. of Hawaii, (38) 541.
borer, see Cosmopolites sordidus.	of Philippines, (35) 647.
bread, notes, (26) 260. bunches, wrappers for, (29) 234.	origin, (31) 237.
disease	planting experiments, (30) 841. pollination experiments, (31) 535.
in Barbados, (34) 841. Cuba, (34) 847.	recipes, (28) 660; (30) 165.
Cubs, (34) 847. Salaver Islands, (37) 556.	reducing and nonreducing sugars in, (29) 503.
Salayer Islands, (37) 556. notes, (28) 345; (28) 349, 443, 545, 743; (30) 652, 747; (32) 548, 751, 752. studies, (36) 352.	ripening studies, (28) 565; (29) 462; (32) 455. varieties, (27) 842.
652, 747; (32) 548, 751, 752.	varieties for Philippines, (29) 839.
treatment, (36) 347.	Bankers— Varieties in Seychelles, (29) 839.
diseases	associations, agricultural committees, (27) 399.
descriptions, (29) 350; (31) 244; (36) 452.	relation to farmers, (33) 490.
descriptions, (29) 350; (31) 244; (36) 452. in Jamaica, (34) 348; (35) 458. notes, (27) 50, 449, 750; (29) 650; (36) 46; (39)	reform in United States, treatise, (28) 191.
455, 457, 849,	system of France, history and development,
studies, (38) 848. treatment, (29) 749.	(28) 294.
eelworm disease, notes, (40) 750.	Bankipur Agricultural Experiment Station, (30) 229 Banks, cooperative, organization, (32) 391, 489.
eelworm disease, notes, (40) 750. flour, analyses, (26) 260; (39) 870.	Banks, cooperative, organization, (32) 391, 489. Banksia intergrifolia, food plant of purple scale,
flour, notes, (40) 863. food products, manufacture and use, (29) 461.	(26) 756. Banteng and zebu, zoological relationship, (34) 466.
fruit fly, danger of introduction, (39) 467.	Bantengs, measurements, (27) 672.
fungus disease in Oaxaca and Tabasco, (35) 458.	Baoanusia africana, n.sp., description, (36) 260.

Baobab bank, fiber from (37) 534.	Barley-Continued.
Bardarea Dardalea, eradication, (37) 742.	as affected by—
Barberries, hybridization experiments, (30) 329. Barberry—	aluminum, (40) 125. boron, (39) 429.
Japanese, leaf hopper on, (33) 58.	cyanamid and dicyanodiamid, (40) 724.
pyralid, notes, (26) 855.	disinfectants, (26) 820.
relation to black stem rust of grains, (37) 552. relation to grain rust, (26) 142, (30) 149.	frost, (27) 560. greenhouse temperature, (37) 533.
Barbituric acid—	poisons, (39) 224.
as precipitant for furfural, (36) 318.	poisons, (39) 224. smelter wastes, (37) 526.
assimilation by plants, (26) 32. Barèges water, sulphur in, (40) 779.	soil disinfectants, (31) 621. soil volume and available plant food, (31)
Baridius orenivora, notes, (40) 754.	132.
lorata, notes, (27) 54.	water level, (26) 620. as beriberi preventive, (28) 761.
portulicae n.sp., description, (35) 365. spp., notes, (30) 357.	green manure, (39) 31.
spp., notes, (30) 357.	substitute for oats, (29) 36. supplement for wheat in bread making
torquatus, noies, (36) 354. traegardhi, noies, (27) 53.	(37) 263.
traegardhi, notes, (27) 53. Barit, notes, (26) 361; (30) 230.	Asplund variety, (40) 626.
Barium-	awned and awnless, transpiration, (29) 135. bacteria affecting malting process, (27) 313.
action on Spirogyra, (37) 130. arsenate, analyses, (26) 65.	bacterial blight—
carbonate as cause of toxicity in flour, (33) 64.	dissemination, (37) 839.
chlorid	notes, (35) 845. studies, (38) 548.
absorption by Aragallus lamberti, (28) 527. action on humus, (39) 514.	bacterial disease, notes, (36) 845.
as coagulant for rubber latex, (26) 141.	beardless, culture. (32) 598.
dosage, (28) 677. detection, (28) 409.	beer varieties, studies, (39) 232. bleached with sulphur, notes, (27) 566.
detection in water, (34) 410.	blindness, notes, (36) 541.
effect on—	blowings, analyses, (27) 774. bran, analyses, (26) 266, 714, 770; (27) 570; (31) 467; (36) 765; (38) 368.
guinea pigs, (26) 432.	467: (36) 765: (38) 368
nitrogen-lixing bacteria, (38) 428. plant growth, (40) 819. Spirogyra, (38) 27. wheat, (40) 515. hydrate, diffusion in soils, (29) 128. hydrate, diffusion handling (20) 805.	bran, methods of analysis, (29) 311.
Spirogyra, (38) 27.	bread, making, (30) 159. breeding, (26) 431; (32) 38; (40) 523.
wheat, (40) 515.	breeding—
	and improvement in Sweden. (39) 833.
in plants, (30) 502; (38) 409.	experiments, (27) 734; (28) 828; (29) 138; (30) 633; (33) 331, 432; (37) 33, 827; (39)
in plants, (30) 502; (38) 409. soils, (31) 720. tobacco, (31) 715.	126; (40) 233, 524.
	brewing, dissemination in Germany, (27) 639.
weeds, (20) 432. ions, effect on the heart, (27) 780. oxid, fixation of nitrogen by, (29) 822. phytate, composition, (31) 708. polysulphid, fungicidal value, (33) 347.	bushel weights, (37) 889. by-products, analyses, (38) 67.
ovid fixation of pitrogen by (20) 822	ahanastanistise (20) 20
phytate, composition, (31) 708.	Chinese, varieties, (29) 530.
polysulphid, fungicidal value, (33) 347.	765: (39) 370. (40) 571.
removal from brines, (36) 809. relation to loco-weed disease, (27) 580.	classification. (27) 31; (38) 833.
Saits, ellect on—	cold resistance of, (30) 524.
activity of lipase, (31) 264.	Chinese, valieties, (29) 530. Chinese, valieties, (29) 530. chop, analyses, (28) 464; (31) 863; (34) 169; (36) 765; (39) 370, (40) 571. classification. (27) 31; (38) 833. cold resistance of, (30) 524. coloring matanals in, (32) 59. composition, (31) 431; (32) 760.
nodule production in vetch, (32) 728. separation from—	composition as a Tected by—
calcium and magnesium, (26) 204.	composition is infected by— companion et op., (26) 617. environment, (32) 431. fertilization and soil preparation, (34) 230 irrigation, (28) 332. composition at different stages, (39) 836. correlation in, (30) 235, 830; (32) 433; (37) 141. cost of production, (26) 94; (29) 690; (32) 530 594, 688; (33) 830; (35) 691. cost of production in—
calcium and strontium, (26) 201. sulphate as soil disintectant, (31) 621.	fertilization and soil preparation, (34) 230
sulphur, insecticidal value, (34) 61. sulphur preparation, tests, (33) 330, 340.	irrigation, (28) 332.
sulphur preparation, tests, (33) 339, 340.	correlation in. (30) 235, 830; (32) 433; (37) 141.
toxicity toward plants, (30) 128; (38) 628.	cost of production, (26) 94; (29) 690; (32) 530
Bark- beetle, European, notes, (28) 57.	594, 658; (33) 830; (35) 691. cost of production in—
breths	Austria, (28) 594.
identification, (29) 859.	Great Plains area, (33) 231.
injurious to rubber, (27) 468. injurious to tropical plants, (30) 660.	covered smut, description and treatment, (26)
neinaloges associated with, (33) 750.	critical period of growing season, (39) 811.
notes, (32) 448, 552; (34) 857. of Canada, (38) 163; (40) 552. of Japan, (20) 560.	culture, (27) 337; (30) 434; (32) 132, 760; (34) 1\$8 694; (38) 636; (39) 834.
of Japan, (20) 560.	culture-
orchard, studies, (31) 852. studies, (28) 561.	and use, (39) 533. continuous, (27) 831, 832; (29) 227; (30) 124 (35) 30; (37) 445; (39) 530, 635; (40) 824.
borers killing healthy fir trees, (37) 465.	(25) 30: (27) 445: (29) 530, 635: (40) 824
ringing, ellect on sap descent, (32) 523.	experiments, (26) 38, 329, 737; (27) 232, 233,
ringing, effect on trees, (38) 128. structure, notes, (27) 347.	335, 530, 638; (20) 138, 225, 426, 427, 630, 632,
use for paper specialties, (36) 417.	430, 481, 526, 528; (33) 280, 328, 481, 633, 880
Barley—	(34) 137, 228; (35) 228; (36) 32, 33, 436, 830
acidity in, estimation, (40) 611.	(37) 436, 438, 734, 823, 825; (38) 132, 133, 134,
amylase of, studies, (31) 609. analyses, (26) 266, 363, 369, 770; (27) 170, 461, 359; (28) 464; (29) 270, 367, 470; (30) 434; (31) 864; (34) 667; (36) 65.	227, 437, 632; (40) 731, 734, 735.
639; (28) 464; (29) 270, 367, 470; (30) 434; (31)	experiments in Canada, (40) 228.
864; (34) 667; (36) 65.	(35) 30; (37) 445; (39) 530, 635; (40) 824. experiments, (26) 88, 329, 737; (27) 232, 233, 325, 530, (38; (20)) 138, 225, 426, 427, 630, 632, 736; (30) 33, 133, 231; (31) 44; (82) 36, 132, 430, 431, 526, 528; (33) 229, 323, 431, 633, 830; (37) 436, 438, 734, 823, 825; (38) 132, 133, 134, 334, 631, 632, 634, 830; (39) 124, 125, 126, 128, 227, 437, 632, (40) 731, 734, 735. experiments in Canada, (40) 228. experiments in Unicalland, (40) 230.
and oats— comparative growth in nutrient solutions,	experiments in Rhodesia, (40) 825.
(40) 134.	for chicken feed, (38) 827.
comparative yields, (40) 135, 328, and peas as hay crop, (89) 333.	IOF Day, (39) 125. for winter forege (38) 735.
and wheat, hybrid between, (34) 389.	for hay, (39) 125. for winter forage, (38) 735. in Argantina, (87) 823.

Barley-Continued.	Barley-Continued.
culture—continued. in Indiana, (40) 735.	germination—continued. tests, (29) 223; (31) 733; (37) 239.
Iowa, (39) 135	tests in hydrogen peroxid, (27) 201.
Mexico, (32) 131. Michigan, (39) 320	germinative ability and vegetative force, (29) 740.
New Mexico, (40) 18.	germ-ripening experiments, (26) 130.
New South Wales, (38) 231. North Dakota, (40) 736	grades of, (32) 138. grain—
southern Idaho, (36) 227. Texas Panhandle, (29) 429; (35) 440.	amino acid in, (33) 665. development, studies, (27) 836.
Washington, (37) 334.	morphology, (32) 823.
western Nebraska, (35) 438. Wisconsin, (31) 134.	grass— analyses, (28) 463; (30) 565
Wyoming, (38) 527. on moor soils, (30) 229; (38) 132; (39) 428, 437;	smut, infection of wheat by, (26) 845.
(40) 523.	green, analyses, (29) 467; (30) 565 green manuring experiments, (37) 734.
relation to rainfall, (33) 715.	ground, analyses, (26) 363, 468, (27) 570. ground, digestibility, (37) 677.
under dry farming, (26) 828; (30) 435; (36) 528, 529; (37) 329; (39) 131.	growing with—
under irrigation, (34) 528. cytological studies, (26) 325.	legumes, (40) 822. soy beans, (39) 741.
decomposition in soil, (40) 214.	growth as anected by—
decorticated or sterilized, relation to beriberi, (35) 167.	alkali salts, (34) 125. Azotobacter, (28) 814.
depth of sowing tests, (27) 835.	Azotobacter, (28) 814. calcium ovid, (40) 124. concentration of nutrient solution, (35) 436.
development as affected by iron, (30) 728. development of grains, (32) 121.	
dietary qualities, (39) 666. diseases—	electricity, (30) 827. fertilizer salts. (29) 329.
in Egypt, (30) 747. notes, (33) 146; (35) 245. studies, (28) 844; (30) 846.	electricity, (30) 827. electricity, (30) 827. fertilizer salts, (29) 329. meteorology, (29) 510. radioactivity, (28) 731. spacing, (31) 328.
studies, (28) 844; (30) 846.	spacing, (31) 328,
treatment, (31) 446; (35) 544; (36) 247, 845. distance experiments, (30) 732.	
dynamiting and subsoiling experiments, (32)	acid soil, (40) 324. artificial light, (28) 735. association with weeds, (38) 734.
528. ears, abnormal, notes, (29) 446.	association with weeds, (38) 734. heated soils, (31) 216.
effect on—	etariligad ealle (31) 336
companion crop of peas and beans, (32) 515. milk and butter, (34) 570. milk secretion, (34) 269; (36) 173; (40) 878.	water culture, (33) 223.

germinating, enzyms of, (38) 9. oil content of seeds, (27) 716.	protein content of soy dean. (34) 141.
seeding experiments, (37) 826.	soil moids, (40) 123. soil potash, (36) 625.
selection experiments, (38) 635.	soil molds, (40) 123. soil potash, (36) 625. soils, (27) 622; (39) 821. solubility of calcium and phosphoric acid
Cake and corn feeding, manurial value, (40) 824. Cakes—	(39) 23.
artificial coloring, (28) 510.	solubility of iron phosphate, (37) 324.
making, (33) 695. making, principles of, (31) 299.	strawberries, (34) 150. sulfofying power of soils, (37) 120.
oven temperature for, (33) 565.	superphosphate, (36) 325, 821; (39) 119
Caladiums—	wine, (29) 117. carbonate—
culture experiments, (40) 434. varieties, (31) 524; (35) 134; (38) 526.	fertilizing value, (30) 127.
'Calafatite deposits in Spain, (26) 728.	fixation in soils, (31) 25.

Calcium—Continued.	Calcium—Continued.
carbonate—continued.	cyanamid—continued.
formation by bacteria, (26) 618. from causticizing plant, analyses and ferti-	granulated, manufacture, (35) 22. in mixed fertilizers, (33) 25
lizing value, (31) 125.	industry in various countries, (32) 820.
loss from cultivated soil, (30) 817.	industry, status, (27) 128, 519; (30) 125. injurious action, (37) 815.
methods of analysis, (29) 311. relation to chlorosis, (28) 242, 425, 623; (33)	lessening dusty conditions of, (30) 26.
520,	loss of nitrogen in, (27) 824.
rôle in assimilation of ammonia, (36) 631. waste, use against finger-and-toe disease,	manufacture, (34) 622.
(35) 522.	manufacture and use, (27) 520; (35) 428. manufacture, progress in, (29) 730.
caseinate, basic, preparation, (29) 10.	methods of analysis, (26) 109, 606, 804
absorption by plants, (35) 435.	eyanamid, mixing with— coal tar, (38) 725.
as coagulant for rubber latex, (26) 141.	pulverized bog iron ore, (35) 12%.
as dust preventive, (32) 884. chlorid, effect on—	superphosphate, (29) 21; (31) 822. Thomas slag and kainit, (31) 422.
action of trypsin, (26) 159.	cyanamid—
activity of malt diastase, (29) 528. ammonia fixing power of soils, (27) 323.	nitrites in, (32) 217. oiled, fertilizing value, (31) 422.
concrete, (36) 286.	paper on, (32) 121.
disease resistance in animals, (32) 373. germination and growth of crops, (34) 125.	preparation and properties, (26) 525, production, (28) 817; (31) 321, 725; (39) 825.
gormination of soods (90) 207	production, (28) 817; (31) 321, 725; (39) 825, production and use, (29) 126, 213, 517; (30)
growth of rice, (30) 833. moor soils, (35) 724. permeability of protoplasm, (33) 328. physical properties of soils, (39) 215. roads, (30) 486.	126; (32) 125.
permeability of protoplasm, (33) 328.	solubility in water, (31) 725. spoiled, effect on outs, (40) 815.
physical properties of soils, (39) 215.	storage, (34) 724; (36) 426. studies, (29) 127.
seed germination, (26) 131.	time of application, (30) 125.
strength of concrete, (30) 589.	trade in, (31) 29.
chlorid— for calves and pigs, (30) 67.	transformation in soils, (27) 625. transformation in storage, (27) 621.
for pigs, (27) 872.	transformation into ammonia, (31) 721.
purification of water by, (26) 214; (27) 512. relation to ammonification and concentra-	use, (32) 323; (36) 427. use against Colaspidema atrum and dodder,
tion of soil solution, (39) 323. use in bread making, (29) 565; (31) 357.	(29) 561.
compounds, effect on plant growth, (35) 726.	use against nematodes, (37) 453, 652. use against weeds, (31) 532; (35) 340.
content of cucurbit vines, (39) 747.	use against wild mustard, (31) 524, 633, 739.
cyanamid— action as affected by iron, (27) 500.	use in Austria, (28) 723. valuation, (36) 420
after-treatment, (26) 425. ammonia from, (31) 822; (38) 516.	deficiency, effect on oat plant, (40) 324.
ammonia from, (31) 822; (38) 516. analyses, (32) 32.	determination, (32) 714; (34) 712; (36) 112; (39) 311.
application, (31) 518.	as oxilate, (32) 504.
application to winter grain, (33) 125. as affected by carbon dioxid, (32) 125.	as tungstate, (32) 116.
herbicide for Cuscuta, (26) 44.	filter for, (38) 506. in ash, (29) 610; (36) 317, 613.
retarder of denitringation, (34) 219.	bloo I and milk, (37) 207.
top-dressing for oats, (35) 519. top-dressing for rye, (28) 626.	foods, (29) 809. plunts, (29) 797.
availability of nitrogen in, (35) 426. catalysis, (32) 125.	presence of magnesium, (26) 205.
change of in soils, (26) 425; (39) 522.	presence of manganese, (27) 503. presence of phosphoric acid and tron,
change of in soils, (26) 425; (39) 522. decomposition, (27) 624.	(36) 14.
decomposition in presence of water, (36) 426, destruction of wild mustard by, (27) 724.	solids and fluids from animal organism, (33) 713.
detection, (20) 804.	urine and feces, (34) 50s.
cyanamid, effect on— composition of beets, (31) 737.	urine and other physiological fluids, (30) 210.
composition of beets, (31) 737. decomposition of soy bean fodder, (40) 214. germination of cereals, (33) 818.	water, (35) 805.
germination of dodder, (27) 28.	effect on— Aspergillus niger, (26) 431.
soils, (27) 625. sugar beets, (33) 434. superphosphate, (30) 26.	coagulation of milk, (33) 674. concrete sund, (34) 787.
superphosphate. (30) 26.	growth and composition of hone, (32) 465,
tne eye, (31) 29.	764.
cyanamid— eradication of weeds by, (26) 839.	herbaceous plants, (33) 425.
eradication of weeds by, (26) 839. experiments, review and bibliography, (27)	lupines, (34) 724. soils, (32) 33.
123. fertilizing action in relation to soils, (34) 820.	toxicity of salts in nutritive solutions, (29) 322.
fertilizing value, (26) 125, 233, 323, 324, 425,	excretion as affected by lecithin, (26) 766. excretion in the dog, regulation, (37) 64.
525, 536, 537, 622, 630, 725, 818, 837; (27) 218, 336, 337, 519, 625, 626, 832, 833; (28) 521, 723,	excretion in the dog, regulation, (37) 64.
817; (29) 23, 125, 127, 213, 831; (30) 125, 427,	fed pregnant swine, effect on offspring, (32) 366.
817; (29) 23, 125, 127, 213, 831; (30) 125, 427, 626, 627, 632, 731, 822, 835; (31) 36, 37, 124, 517, 518, 524, 725, 732, 820; (32) 336, 831, 832; (32) 336, 831, 832;	feed analyses, (31) 864.
(33) 219, 624; (34) 22, 24, 25, 130, 219, 431, 518, 622, 820; (35) 22, 126, 218, 323, 325, 336,	fluosilicate, fertilizing value, (29) 823. for horses, (30) 571.
518, 622, 820; (35) 22, 126, 218, 323, 325, 336, 427, 518, 519, 629, 630; (36) 232, 332, 427, 818,	function in plants, (30) 523.
833; (37) 23, 216, 426, 539, 540, 815; (38) 516;	hypochlorite— antiseptic and germicidal value, (37: 176.
(40) 539. for peat soils, (39) 428.	as a seed sterilizer, (35) 46.
for summer crops. (37) 217.	effect on bacteria in water, (38) 489. effect on glanders bacillus, (40) 478.
formation and decomposition, (26) 33. formation from free nitrogen, (32) 217.	purification of water by, (32) 87, 786.
granular, fertilizing value, (39) 116.	purifying action on water, (36) 889. sterilization of milk bottles with, (27) 282.

Jaleium—Continued.	Calcium—Continued.
hypochlorite—continued.	paracaseinate of cow's and goat's milk, cleav-
sterilization of water by, (33) 883; (37) 588. use against apple scab, (37) 755.	age, (27) 12. phosphate—
hyposulphite, fungicidal value, (39) 349.	citrate solubility, (37) 713.
importance in animal nutrition, (31) 663; (33)	citrate solubility, (37) 713. decomposition by acetic acid, (36) 712.
758.	determinination, (32) 409. diffusion in soils, (29) 128.
in Asiatic foodstuifs, (29) 64. blood of lactating cows, (37) 308.	Thornata affect on
feeding stuffs, (30) 867.	phosphate, effect on— composition of milk, (34) 270.
normal urine, (36) 366.	germination of seeds, (29) 328.
nutrition of plants, animals, and man, (40)	sugar content of cane, (38) 230.
767.	phosphate—
Soil, (36) 621.	fertilizing value, (26) 622; (27) 342. in animal nutrition, (29) 869.
soil, solubility, (39) 24, 821. the diet, (31) 357, 860.	in rations of domestic animals, (32) 566.
inorganic, in milk, (37) 208.	in vicinity of Monterey, Mexico, (36) 821.
loss in drainage water, (26) 421.	in vicinity of Monterey, Mexico, (36) 821. manufacture from milk, (30) 378.
magnesium ratio in the diet, (29) 565.	precipitated, fertilizing value, (31) 823.
metabolism—	solubility and assimilability, (40) 128.
in dogs, (58) 569. 14-year-old boys, (30) 262.	solubility in ammonium citrate solution,
infants. (29) 166.	(33) 412. physiological action, (27) 229.
women, (40) 174.	physiological functions in plants, (29) 528.
iniants, (29) 166. women, (40) 174. index of, (32) 588. studies, (39) 875, 876.	potassium permutite, fertilizing value, (29) 211.
studies, (39) 875, 876.	pyrophosphate as a fertilizer, (30) 222. relation to plant nutrition, (37) 631, 799.
nitrate— analyses, (32) 424.	relation to plant nutrition, (37) 631, 799.
assimilation by mold fungi, (29) 29.	removal from soils, (39) 517. resorption and retention by the intestine, (28)
availability of nitrogen in, (35) 426.	865.
nitrate, effect on-	retention by pigs, (28) 469; (29) 66. rôle in forest vegetation, (32) 728.
assimilation of phosphates, (29) 318.	rôle in forest vegetation, (32) 728.
germination of dodder, (27) 28. nitrogen-assimilating bacteria, (38) 724.	rôle in germination, (39) 526.
nodule formation, (37) 133.	salts— absorption by plants, (35) 433.
phosphorite, (29) 624.	as a factor in onset of labor, (34) 184.
phosphorite, (29) 624. plants, (28) 527.	as affected by Bulgarian ferment, (26) 203
sugar beets, (30) 31. toxic salts, (30) 31.	salts, effect on—
toxic saits, (30) 31.	action of phosphoric acid, (27) 623.
weed growth in meadows, (38) 141. wheat seedlings, (31) 426.	activity of lipase, (31) 264. Aspergillus niger, (28) 824.
	canned foods, (34) 67.
nitrate— ifrate— fortilizing value, (26) 233, 321, 425, 525, 536, 622, 630, 631, 735, 837; (27) 21, 336, 337, 519, 626, 724, 832, 833, 837; (28) 521, 723, 817, 827; (29) 23, 125, 213, 424, 529; (30) 626, 627, 532, 637, 835; (31) 124, 517, 518, 732, 820, 821; (32) 336, 532, 832; (33) 25, 219; (34) 130, 518, 622; (35) 22, 218, 323, 336, 427; (30) 134, 232, 626, 533; (37) 428, 739; (39) 428, 537. for arid soits, (36) 726, corn, (31) 831, mangels, (29) 830.	fowis, (39) 177.
622, 630, 631, 725, 837; (27) 21, 336, 337, 519,	generation of trypsin, (29) 662.
626, 724, 832, 833, 837; (28) 521, 723, 817, 827;	nitric-nitrogen accumulation, (40) 722.
(29) 23, 123, 213, 423, 529, (30) 526, 527, 532,	nodule production in vetch, (32) 727.
(32) 336, 532, 832; (33) 25, 219; (34) 130, 518,	plants, (32) 538. root hairs, (38) 330.
622; (35) 22, 218, 323, 336, 427; (36) 134, 232,	root hairs, (38) 330. soil bacteria, (38) 818.
626, 833; (37) 426, 739; (39) 428, 537.	solubility of phosphates, (30) 626.
for arid soils, (36) 726.	salts—
corn, (31) 831.	rôle in putrition (40) 273
	toxicity in soil. (36) 515.
peat soils, (39) 428. hygroscopicity, (26) 425.	flocculating power on clay, (27) 620. rôle in nutrition, (40) 273. toxicity in soil, (36) 515. separation from barium and strontium, (26) 204.
in nutrient solutions, effect on plant growth,	separation from magnesium, (28) 409; (33) 412. sources for growing pigs, (31) 268.
(39) 28, 331.	sources for growing pigs, (31) 268.
Industry in various countries, (32) 820.	sulphate, see Gypsum. sulphid—
manufacture, (28) 221. manufacture in the South, (27) 824.	effect on soil microorganisms, (31) 27.
manufacture, progress in, (29) 730.	soil treatment with, (40) 619.
mothods of analysis, (26) 606.	sterilization of soils by, (32) 816.

Calipers—	inquisitor, notes, (35) 460.
chest contour, (40) 277.	scrutator, notes, (28) 755.
circular area, notes, (28) 440. for measuring cattle, (40) 872.	studies, (38) 61.
Caliroa, see Eriocampoides.	SVCODDADIA
Calisto archebates—	dispersion in New England, (33) 254.
introduction into Porto Rico, (39) 58.	in Maine. (37) 459.
notes, (36) 754.	dispersion in New England, (33) 254. in Florida, (37) 659. in Maine, (37) 459. life history and distribution, (35) 460.
Calles, phyllody of corolle in (31) 143	locomotion of larvae, (27) 360.
Calla illy pollen, parasite of, (31) 641. Callas, phyllody of corolla in, (34) 143. Callicratides rams, notes, (34) 652. Callidrate orbane, notes, (34) 652.	notes, (27) 560.
Callidryas eubule, notes, (27) 559.	studies, (26) 350; (33) 457. Calosphaeria princeps, notes, (31) 539.
Calliephialtes—	Calospora vanillae, description, (27) 450.
sp., in California, (31) 256.	Caloteleia sp., notes, (31) 650.
sp., parasitic on codling moth, (30) 360.	Calotermes—
thurberiae n.sp., description, (34) 363. Callimome n.spp., descriptions, (28) 162. Callimomidae of Australia, (39) 154.	(Glyptotermes) satsumensis n.sp., description,
Callimomidae of Australia, (39) 154.	(35) 255.
Ualibnora—see also Blow files.	lucifugus attacking grapes, (36) 651.
erythrocephala— "critical" point for, (38) 265.	Calotropis—
destruction by best (98) 759	gigantea, seeds of, (32) 613. procera latex, rennet of, (31) 410.
hibernation (34) 254	Calpodes ethlius, notes, (27) 56.
destruction by heat, (28, 752, hibernation, (34) 254, notes, (28, 255; (30) 458, 459.	Calvatia spp., effect on vegetation, (38) 222.
spp., development, (31) 456. spp., hibernation, (38) 262. viridescens, notes, (26) 147.	Calves—
spp., hibernation, (38) 262.	anaerobes in, (26) 586.
Callinharing outgroups paragitas of demostic ani	as affected by pleuro-pneumonia virus, (27) 785
Calliphorine cutaneous parasites of domestic animals, (27) 656.	as affected by rations from single plant sources (33) 367.
Callipterinella annulata, notes, (37) 562.	birth weights, (37) 684.
Callipterus—	birth weights, (37) 684. bone content, (31) 564. brains, creatin and creatinin content, (31) 760.
bellus, notes, (35) 56.	brains, creatin and creatinin content, (31) 760.
trifolii, studies, (32) 247.	calcium entorid for, (30) 67.
Callirrhoe spp., food plants of cotton boll weevil,	care and mangement, (34) 471; (35) 94.
(31) 458.	cottonseed meal for. (26) 879
Callopistria floridensis—	cost of raising, (32) 574; (38) 683; (39) 782. cottonseed meal for, (26) 879. dairy, raising, (39) 771; (34) 667; (39) 182, 882 dairy, rearing chart, (37) 575.
notes, (28) 854; (34) 158; (36) 355; (38) 358. studies, (29) 854.	dairy, rearing chart, (37) 575.
Callosamia promethea, notes, (30) 655.	dairy, wintering experiments, (37) 082.
Callose, occurrence in root hairs, (29) 326.	destruction by cottonseed meal, (29) 77. estimating age of, (31) 266; (33) 469.
Callosities, inheritance in horses, (26) 571.	factors affecting growth (35) 868
Callospermophilus—	feeding and care, (28) 581; (32) 568; (33) 98; (36) 773; (37) 367, 683.
(Citellus) chrysodeirus, susceptibility to plague, (26) 59.	773; (37) 367, 683.
leteralis convin subsp. description (27) 759	19eding experiments, (26) 367; (27) 372, 673; (28)
lateralis caryi n.subsp., description, (37) 758. lateralis cinerascens, relation to spotted fever,	(31) 75, 866: (32) 362, 669, 672, 768, (33) 269, 260
(31) 160.	570, 765; (34) 180, 265, 667, 773, 774, 868; (35)
spp., prevalence in Colorado, (28) 652.	715; (31, 561, 683, 584, 587; (27) 372, 673; (28) 572; (29) 169, 170, 277, 468, 571, 668; (30) 671 (31) 75, 866; (32) 362, 669, 672, 768; (33) 268, 269 570, 765; (34) 180, 265, 667, 773, 774, 868; (35) 870; (36) 75, 369, 370, 565, 567; (37) 366, 675, 560; (38) 69, 679, 773; (39) 71, 76, 169, 273, 382 (40) 369.
Calluna vulgaris—	873; (38) 69, 679, 773; (39) 71, 76, 169, 273, 382
behavior on lime soils, (31) 425. obligate symbiosis in, (33) 221.	(40) 809.
obligate symblosis in, (33) 221.	food requirements, (34) 775. for veal, (39) 76.
sprigs, as a substitute for black tea, (33) 866.	growth on pasture, (31) 767.
Calocampa— cineritia, notes, (35) 756.	growth on pasture, (31) 767. hand feeding, (38) 773.
nupera, parasites of, (31) 752	hairless, (39) 187.

Calves—Continued.	Campers, handbook for, (34) 46.
immunization against—	Camphor—
anthrax, (31) 82.	analyses, (40) 559.
dysentery, (26) 682.	chemistry of (35) 317
tuberculosis, (26) 181, 284, 380; (27) 383; (29) 894; (33) 878.	blackening and dying of shoots, (30) 48. chemistry of, (35) 317. detection in ethyl alcohol, (29) 312.
large, obstetrical aid for, (26) 277.	determination, (27) 499. diseases, new, in Texas, (37) 843.
marketing in the South, (37) 391.	diseases, new, in Texas, (37) 843.
metabolism experiments, (26) 768.	diseases, notes, (28) 148.
milk as sole diet, (40) 767. milk substitutes for, (33) 669.	effect on hyacinths and tulips, (26) 731. from black sage, (33) 202.
mineral phosphates for, (33) 469.	from Cinnamomum camphora, (27) 442.
newborn—	insecticidal value, (39) 762. insects affecting, (31) 849. liniment, notes, (31) 658, 676.
composition, (37) 72. diseases of, (37) 379.	insects affecting, (31) 849.
infection of, (10) 887.	mathode of analysis (27) 210
mineral constituents, (27) 499.	methods of analysis, (27) 210. spirits of, analyses, (32) 456.
weights, (32) 862. parathyroid glands of, (29) 377.	thrips, see Cryptothrips floridensis.
parathyroid glands of, (29) 377.	trees, culture experiments, (40) 339.
preserved skim milk for, (38) 377.	trees, growing in Florida, (37) 346.
profit and loss in feeding, (28) 374. raising, (29) 571; (30) 671; (31) 299. 566.	trees, insects affecting, (29) 853. trees of Mauritius, (37) 310.
raising	Camphora, nature and use, (26) 580.
and fattening in Alabama, (31) 169; (32) 69.	Campeletis prodeniae n. sp., description, (26) 352.
and finishing, (28) 395. emulsion system, (29) 369. in Hungary, (33) 269. on skim milk, (33) 374.	Camponotus—
in Hungary (23) 960	herculeanus ferrugineus, embryology, (29) 860.
on skim milk. (33) 374.	herculeanus, notos, (26) 147. maculatus turkestanicus, remedies, (31) 155.
range, winter feeding, (31) 468.	reticulatus fullawayi n.subsp., description, (27)
range, winter feeding, (31) 468. rations for, (30) 169.	264.
raw v. heated milk for, (28) 775.	Campoplex—
rennet, immunizing against, (30) 477.	n. spp., descriptions, (29) 563; (30) 60, phthorimaeae, notes, (36) 655. variabilis n.sp., description, (34) 363.
sex control in, (29) 468. skim milk and cassava meal for, (30) 768; (31)	variabilis n.sp., description, (34) 363.
266.	VALIADINS ILSD., HOLES, (36) 652.
slaughtering in Great Britain, (29) 571. slaughtering on the farm, (35) 317.	Campsomeris dorsata, notes, (34) 455. Camptobrochis nitens, notes, (28) 252.
slaughtering on the farm, (35) 317.	Camptobrochis nitens, notes, (28) 252.
spleen, bacterial content, (39) 389. spring, advantages of raising, (33) 570.	Camptosorus rhizophýlius, studies, (33) 27. Campylendria curvata, notes, (29) 252.
suckling, intestinal flora of, (35) 282.	Campylochaeta obscura, studies, (39) 659.
susceptibility to tuberculosis, (26) 178.	Campylomma verbasci—
triplet, notes, (31) 767.	notes, (30) 359.
triplet, studies, (28) 467. variation in weight, (36) 566.	relation to fire blight, (33) 744.
weight of, (33) 171.	Canada Experimental Farms— notes, (28) 94: (30) 599: (34) 498: (36) 600, 697
wintering, (40) 472.	notes, (28) 94; (30) 599; (34) 498; (36) 600, 697 report, (36) 97; (38) 698; (40) 797.
young—	Canada thistle—
digestion of starch by, (38) 874.	control, (26) 839.
slaughtering, (26) 473. sour milk for, (33) 269.	destruction, (27) 31. eradication, (28) 834; (31) 438. geographical distribution, (26) 335.
Oalycanthus—	geographical distribution. (26) 335.
occidentalis, volatile oil of, (36) 206.	Canadian—
spp., hydrocyanic acid in, (28) 429.	agricultural institutions, notes, (37) 100.
Oalyptospora— columnaris, infection experiments, (30) 745.	Forestry Association, report, (32) 238.
goeppertiana, life history, (30) 745.	Fruit Marks Act, (29) 868. Phytopathological Society, (40) 699.
Cambium miners—	Phytopathological Society, (40) 699. Seed Growers' Association, (28) 638, 739; (37)
new, (37) 764. notes, (29) 44.	141, 831.
1016S, (29) 44.	Canaigre, acclimatization in France, (37) 220.
studies, (33) 749 Cambridge University, notes, (36) 699.	Canal—
Camden chert as a road-making material, (26) 685.	banks, blanketing, (40) 188. banks, grass mixtures for, (28) 829.
Camel—	engineering, treatise, (32) 481.
diseases in India, (28) 482; (36) 680.	measurement, (40) 185.
diseases, notes, (32) 154. louse, notes, (26) 655.	Canals—
Camelidae, South American, economic importance,	algae control in, (40) 188.
(27) 470.	concrete lining for, (32) 481.
Camellia—	excavation, estimating for, (33) 586. frictional resistance in, (30) 885.
drupifera fruit, chemical study, (39) 501. japonica, stomata of, (36) 223.	irrigation, see Irrigation.
scale, notes, (28) 854.	losses from by scepage, (30) 288.
Camels—	power, design, (33) 886.
in Tunis, description, (27) 571.	silting in, (30) 588; (31) 383. unlined, seepage from, (33) 885, 886.
management in East Africa, (28) 268.	Canaries—
notes, (30) 569, 784. variations in normal temperature, (37) 690.	breeding experiments, (30) 564.
Camera—	care and management, (36) 455.
lucida, installation, (35) 899.	hybridization, (27) 276.
microscopic, installation, (35) 899. Campula pellucida, notes, (28) 59; (36) 153.	Canarium— bengalense, methods of analysis, (27) 210
Campula peliucida, notes, (28) 58; (30) 163. Camomile flowers, chemistry of, (33) 202.	nut milk as a food for infants, (29) 566.
Camp—	nuts, microscopic identification, (28) 565.
cookery, book on. (38) 469.	Canary—
cookery, notes, (27) 463.	disease resembling fowl cholers, (31) 879.
rations and equipment, (30) 763. sanitation and housing, (33) 691.	grass—see also Phalaris bulbosa. culture experiments, (32) 431.
Campanula—	on bog and moss soils, (40) 212.
carpatica, segregation in, (39) 123.	seed, agglutinating properties, (31) 774
leaf spot, notes. (27) 45.	Toowomba, varieties, (30) 434.
medium, Scierotinia disease of, (34) 354.	varieties, (29) 222.

Canary—Continued.	Cane—Continued. sugar—continued.
culture experiments, (37) 823.	inversion, (36) 802.
production in Spain, (28) 736.	inversion and determination, (38) 507.
Canavali obtusifolia, culture, (34) 736. Canavalia—	inversion by ammonium chlorid, (30) 811. manufacture, clarifiers, (37) 208.
agronomic value and species, (39) 635.	manufacture, handbook, (35) 114; (38) 508, raw, acidity, (28) 614.
ensiformis— analyses and digestibility, (28) 464.	raw, acidity, (28) 614. raw, deterioration, (38) 805.
anatomical structure, (31) 314.	relation to mold fungi, (28) 429.
as a cover crop for coconuts, etc., (33) 535.	sirup, analyses, (34) 660.
composition and digestibility, (33) 267. culture, (30) 335.	solutions, osmotic pressure, (28) 262. synthesis, (34) 803.
culture experiments, (28) 136.	toxicity (28) 462 661
culture in German East Africa, (27) 419. fertilizing value, (34) 34.	v. beet sugar for fermentation purposes, (35) 718.
notes, (31) 336.	top silage and molasses for cattle, (32) 668.
oil content of seed, (27) 717. urease content, (35) 612.	tops, analyses, (33) 568. trash ash, composition and use, (27) 727.
gladiata—	v. corn for silage. (31) 36.
as green manure, (32) 423. culture experiments, (27) 233.	Canestriniidae, new genus, (34) 66. Canidia curculionis, notes, (26) 151; (27) 562.
spp., notes, (28) 838.	Canidia curculionis, notes, (20) 101, (27) 302. Canidiella curculionis, parasitic on alfalfa weevil,
spp., notes, (28) 838. Canavalin	(31) 61.
chemistry of, (37) 8. studies, (40) 308.	Canine distemper, see Dog distemper. Canis aureus, relation to canine piroplasmosis, (28)
Cancer—	83.
diagnosis, (32) 179, 372. diagnosis, dialysis method, (31) 877.	Canker—

detection, enforzinc-lodid reaction, (30) 415.	use in larm structures, (34) 787.
determination, (26) 363; (27) 312; (28) 206, 615,	use in irrigation structures, (37) 787.
detection, chlorzino-iodid reaction, (30) 415. determination, (26) 363; (27) 312; (28) 206, 615, 711, 805; (29) 506; (30) 315; (32) 300, 314, 716.	vats, coatings for, (34) 287.
determination—	works, by-product potash, (40) 128.
apparatus for, (40) 410. in feeding stuffs, etc., (33) 14.	Cenangium abietis—
in feeding stuffs, etc., (33) 14.	injurious to white pines, (26) 752.
finely powdered materials, (27) 612.	notes, (28) 750; (32) 845.
flax stems. (32) 415.	Cenchrus echinatus, notes, (26) 361.
flax stems, (32) 415. flour, (33) 314.	Centaurea-
linseed cake, (26) 714.	cyanus-
meal, (40) 206.	coloration of flowers, (31) 324.
strow (32) 666	effect on yield of rye and barley, (30) 531
wheat, (40) 14.	scabiosa, root system, (37) 542.
	spp., drought resistance, (36) 734.
with nitric acid, (31) 17. digestibility, (26) 363; (29) 65; (35) 559. digestible, detection in feces, (27) 312.	Centipedes—
digestibility (26) 363: (29) 65: (35) 559	and their venom. (35) 858.
digestible detection in faces (27) 312	and their venom, (35) 858. house, notes, (32) 353.
digestion by cheen and nige (31) 667	summary of information, (39) 768.
digestion by sheep and pigs, (31) 667.	Contiguidae estandamina n en description (31) 556
distillation in vacuo, (38) 708.	Centistidea ectoedemiae n.sp., description, (31) 554 Centotheca malabaria, notes, (26) 361.
distillation under reduced pressure, (40) 110. effect on soil bacteria, (30) 125, 217.	Central Moor Commission report (31) 830
effect on soil nitrogen (25) 219	Central Moor Commission, report, (31) 830. Centralblatt für Bakteriologie, index, (27) 476.
effect on soil nitrogen, (35) 218,	Centrifugal force, effect on chemical systems, (28)
fermentation, (29) 528. fermentation by thermophilic bacteria, (31) 310.	
formentative eleganore (20) 200	168. Centrifuge, use in analytical chemistry, (36) 111.
	Centro-epigenesis, notes, (26) 365.
from millet (29) 117	Centrosema—
for laying hens, (34) 179. from millet, (32) 117. furnace for incineration, (35) 206.	plumieri as a green manure, (36) 324.
humifaction (29) 26	plumieri as a green manure, (30) 324. plumieri, fertilizing value, (34) 34.
humification, (38) 26, hydrolysis, (30) 615; (31) 310. in bacteria, (36) 501. in mixed rations, digestibility, (32) 70.	pubescens, culture, (34) 736.
in hantaria (26) KN1	Cephaelin derivatives, protozocidal and bacter
in mired nations, disartibility (29) 70	oidel estion (92) 190
an anaed radious, digestibility, (32) 10.	cidal action, (38) 180. Cephalandria indica, analyses, (31) 366.
manuacture from Damboo, (21) 041.	Combalarran mutca, analyses, (51) 500.
manufacture from vine shoots, (26) 613.	Cephaleuros-
preparation and use, (30) 315.	henningsii, description, (27) 450.
production from wood, (28) 50.	mycoidea, notes, (29) 345; (39) 849. notes, (30) 354.
studies, (29) 201.	110107, (30) 302.
treatise, (30) 202; (37) 112; (39) 614.	sp. on rubber, (33) 449; (38) 53.

Cephaleuros—Continued.	Ceratophyllus-Continued.
virescens—	famulus, notes, (37) 879.
in Sumatra, (39) 57. notes, (31) 55; (32) 445; (34) 55, 249, 744; (37) 253; (38) 354, 758.	fasciatus— biology, (27) 58.
(37) 253; (38) 354, 758.	biology, (27) 58. bionomics of, (31) 353.
on cacao, (40) 851. Cephalin—	distribution on rats, (29) 755.
fatty acids of, (31) 608.	longevity of, (30) 757.
fatty acids of, (31) 608. fatty acids of, (31) 608. ftromboplastic action, (37) 877. Cephalobus dubius, studies, (40) 267. Cephaloroton puschelli, analyses and digestibility,	life history, (31) 552. longevity of, (30) 757. notes, (28) 255, 356; (33) 159.
Cephalobus dubius, studies, (40) 207.	relation to plague, (33) 749.
(32) 107.	relation to plague, (33) 749. remedies, (31) 353. gallinae, see Hen flea. silantiewi, relation to plague, (26) 252. spp., notes, (28) 757.
Cephalonema polyandrum, fiber from, (37) 535.	silantiewi, relation to plague, (26) 252.
Cephalonomia mendionalis n.sp., description, (31) 355.	
Cephalosporium—	blood-sucking, of Brazil, (29) 54; (32) 450. new, from Peru, (34) 553. notes, (31) 455; (32) 851.
lecanil—	new, from Peru, (34) 553.
description, (33) 459. notes, (26) 553; (27) 358; (28) 453.	review of literature, (30) 159.
lefroyi, association with greenhouse white hy,	Ceratostoma juniperinum in France, (37) 253.
(34) 452. saccharl—	Ceratostomella spp., studies, (27) 354. Cerceris—
	n.spp., notes, (35) 262.
n.sp., description, (30) 650. notes, (34) 49; (35) 49; (37) 452; (40) 47, 157. sp., notes, (28) 733.	spp., bionomics, (35) 468.
sp., notes, (28) 733. sp. on coffee, (32) 646.	females, of America, (39) 364.
Cephalothecium—	sp., parasitic on black scale, (26) 555.
infection of wheat by, (26) 747.	Cercidiphyllum japonicum, food plant of purple
roseum— as affected by cold, (34) 538.	scale, (26) 756. Cercis—
notes, (31) 641; (37) 550.	canadensis, relation between ovules and seeds, (31) 523; (33) 130; (36) 628. fruit, physico-chemical constants of, (31) 427.
relation to apple rot, (33) 348.	(31) 523; (33) 130; (36) 628.
temperature relations, (33) 545; (36) 649. sp. on pecan, (39) 553.	Cercomones termo, notes, (29) 316.

Chaitophorus—	Charbon, see Anthrax.
aceris, biology and anatomy, (37) 55. delicata n.sp., description, (29) 654.	Charcoal—
ianonicus n.sp., description, (29) 004.	action on sugar solutions, (36) 807. as dressing for forest seed beds, (32) 748. as filler for feeding stuffs, (30) 672. as medium for plant growth, (33) 540. burning in Japan, (35) 347. decolorizing efficiency, (35) 612.
japonicus n.sp., description, (40) 165. maculatus, studies, (32) 247. negundinis, see Box elder aphid.	as filler for feeding stuffs, (30) 672.
negundinis, see Box elder aphid.	as medium for plant growth, (33) 540.
spp., dimorphs, (40) 165. Chalaropsis thielavioides n.g. and n.sp., description,	decolorizing efficiency, (35) 612.
(39) 53.	Chard—
Chalastogastra, classification, (26) 863.	fertilizer experiments, (26) 631.
Chalcid— flies—	varieties, (26) 631. Charips xanthopsis, destructive to citrus plant lice,
in alfalfa seed, (32) 454.	(26) 755.
in alfalfa seed, (32) 454. new, of Australia, (37) 560; (38) 768. new, of California, (37) 360, 467. new, of Maryland, (37) 766.	Charitopodinus n.g., erection, (40) 266.
new, of Camornia, (37) 300, 407.	Charlock—see Mustard, wild. oil, chemistry and use of, (35) 412.
Hew. of North America. (38) 303.	Chatopsis aenea, notes, (29) 454.
of North America, (37) 162. West Indian and North American, (39) 869.	Chauliognathus pennsylvanicus, fungus diseases
parasites, immunity to hydrocyanic gas, (38)	of, (26) 252. Chayote—
460.	culture experiments, (30) 632.
Chalcididae—	culture in Louisiana, (29) 534.
of Australia, (39) 154. of wild fig in India, Ceylon, and Java, (38) 565.	diseases, notes, (37) 755. notes, (29) 461; (30) 532; (34) 835.
Chalcidids—	Cheese—
injurious to forest tree seeds, (28) 657.	acid rennet bacteria of, (26) 881.
injurious to grain crops in Russia, (33) 563. new, from Maryland, (36) 556.	acidity, (37) 373. adulteration and misbranding, (28) 776.
Chalcidoidea—	American, in England, (35) 379. analyses, (26) 80, 171, 479; (29) 59, 376, 863; (30)
bred from Glossina morsitans in Northern Rhodesia, (35) 263.	analyses, (26) 80, 171, 479; (29) 59, 376, 863; (30) 208; (35) 558; (38) 781.
new, of West Coast of Africa, (37) 667.	as affected by—
notes, (26) 152.	alkali water, (27) 283.
of Australia, (28) 563. phoresy in, (40) 459.	
Chaicis—	salt, (28) 278. bacterial flora, (27) 284. "Bankrote," red coloring in, (29) 376.
abie sae, notes, (40) 760.	"Bankrote," red coloring in, (29) 376.
amenocles from Glossina, (39) 566. calliphorae, description, (36) 360.	bibliography, (31) 176. blue-veined or Dorset "Vinny", making, (33)
callibhorae, notes, (38) 466.	578.
coloradensis, parasitic on locusts, (32) 60.	box, description, (36) 874. brands, State and National, (40) 476.
compsilurae n.sp., description, (29) 562. hammari n.sp., description, (34) 66.	Brindza, bacteriology of, (33) 277.
obscurata, notes, (26) 758.	brine salting, (30) 275.
ovata, parasitic on alfalfa caterpillar, (32) 58. pandora n.sp., description, (31) 459.	brine-soluble compound in, (26) 212; (29) 805. Brinsen, manufacture, (27) 679.
pomonae n sp., description, (28) 162. sp., notes, (28) 151.	Bulgarian and Kaschkawal, description, (37)
sp., notes, (26) 151.	273. Bulgarian manufacture and composition (40)
thracis, parasitic on banana leaf roller, (26) 857. Chalcodermus aeneus, notes, (37) 659.	Bulgarian, manufacture and composition, (40)
Chalcodermus aeneus, notes, (37) 659. Chalcophora mariana, notes, (27) 863.	buttermilk, manufacture, (27) 74; (31) 874; (33)
Chalepus— dorsalis, notes, (29) 353; (30) 657; (36) 257.	382. Caerphilly—
dorsalis, notes, (29) 353; (30) 657; (36) 257. rubra, notes, (40) 357. spp., notes, (28) 157; (35) 356. Chalicodoma spp., treatise, (32) 758. Chalioides junodi, notes, (29) 758.	manufacture, (30) 77.
spp., notes, (28) 157; (35) 356.	manufacture, (30) 77. manufacture and quality, (29) 676. manufacture in Ireland, (26) 372.
Chalioides junodi, notes, (29) 758.	Tamembert—
	bacterial studies, (35) 177.
as neutralizer for sour milk bacteria, (29) 877. deposits in Yonne, France, (27) 422. effect on soil fertility, (32) 399; (34) 221. fertilizing value and use, (40) 322.	control in France, (37) 176. keeping, (27) 777. manufacture, (30) 378; (32) 176.
effect on soil fertility, (32) 399; (34) 221.	manufacture, (30) 378; (32) 176.
ground, for grassland, (40) 824.	Cheddar—
use on clay soils, (36) 519.	analyses. (40) 865. bacteria in, (31) 476.
Chalogynus osborni n.sp., studies, (40) 265.	changes in during ripening, (37) 373.
Chamaebatia foliolosa, effect on forest reproduc- tion, (40) 842.	cold storage, (27) 377.
Chamaecrista diphylla, culture, (34) 736.	chemistry of, (28) 114. cold storage, (27) 377. factors affecting texture, (31) 570.
Chamaecyparis— nootkatensis, biennial fructification, (29) 543.	factors affecting yield and moisture content.
obtusa, fertilizer experiments, (38) 624.	(30) 877. flavor of, (31) 476.
obtusa, fertilizer experiments, (38) 624. obtusa wood, essential oil of, (34) 802. Chamber of Horticulture for Great Britain, (40)	irilly of sweet havor in, (31) 79.
500.	manufacture, (29) 475; (40) 880. manufacture from pasteurized milk, (27) 74;
Chamomile, dissemination by farm animals, (26)	(28) 581; (29) 475; (31) 874; (33) 175.
839. Champagne—	prevention of polyneuritis by, (31) 762.
composition in relation to effervescence, (35)	ripening studies, (27) 879; (28) 78, 879. shrinkage in, (32) 270.
647.	Cheshire, manufacture, (26) 778; (31) 375. chromogenic microorganisms of, (36) 477.
effervescence of, (36) 113. Changa—	coating, (27) 377; (31) 375.
notes, (31) 452; (36) 355.	color, feeding to cows, (38) 680.
parasites of, (29) 653. remedies, (33) 452. studies, (38) 762.	color, feeding to cows, (38) 680. coloring experiments, (27) 777.
studies, (38) 762.	comparison of types, (29) 564. composition, (26) 880; (28) 374.
Cnaparral—	composition and characteristics, (34) 380.
biologic and economic aspects, (40) 842.	composition and quality, (36) 663.
eradication by goats, (29) 543. Charadrius dominicus fulvus, migration, (27) 355.	control in Holland, (31) 376. cost of making, (26) 82; (27) 377.
Charaeas graminis, notes, (38) 361.	cottage, (39) 267.

Cheese—Continued.	Cheese-Continued.
cottage— as a food, (37) 669.	Grana— manufacture, (30) 275; (33) 876; (34) 572.
as a food, (37) 669. making, (37) 686; (38) 78, 178. metallic flavor in, (35) 277.	or Parmesan, manufacture, (28) 583; (29) 777.
recipes, (39) 267.	or Parmesan, pure cultures for, (27) 283. warm-chamber method of making, (29) 880.
Coulommier, manufacture, (27) 375; (29) 777; (33) 765.	gray, manufacture in the Tyrol, (27) 377.
cow pot, analyses, (28) 278.	green color in, (28) 583. green mold, flavor of, (26) 775.
croam-	green mold, flavor of, (26) 775. Harz, dark coloration in, (26) 675.
fat content, (26) 778. manufacture, (27) 375.	Herrgard, notes, (35) 379, 483. Holland, digestibility, (28) 258.
manufacture and analyses, (32) 176.	homemade, manufacture, (29) 675.
curd, iron content, (27) 811. curd knife, description, (31) 875.	homemade, manufacture, (29) 675. Hungarian, analyses, (26) 372. imports into Peru, (27) 469.
Danish, fat content, (33) 81.	imports into United Kingdom, (26) 479. industry—
decomposition by enzyms of rind flora, (32) 175. descriptions and requirements, (35) 110.	in Canada, (38) 294. Ireland, (26) 372.
determination of—	reland, (26) 372. Netherlands, (28) 178.
acidity, (31) 613. fat content, (26) 276; (27) 312. proteolysis in, (30) 415.	Netherlands, (28) 178. New Zealand, (38) 281 Siberia, (37) 778. United Kingdom, (28) 178.
proteolysis in, (30) 415. total solids, (32) 414.	United Kingdom. (28) 178.
determining yield of, (26) 478.	United Kintes, (30) 777, 791. Tunited Kintes, (30) 777, 791. refrigeration in, (27), 377. international trade in, (27) 574. Italian, fat content, (33) 81. Jack, manufacture, (27) 377; (40) 576. judging by score cards, (27) 74. Kbnichberg, analyses (34) 572.
digestibility as compared with beef, (26) 761. diminution of fats in during ripening, (31) 475.	international trade in. (27) 574.
discoloration, studies, (26) 479. dishes, recipes, (31) 656.	Italian, fat content, (33) 81.
dishes, recipes, (31) 656. Dorset-Blue, manufacture and quality, (29) 676.	judging by score cards, (27) 74.
Edam—	Konigsberg, analyses, (34) 572. Liptauer—
composition and control, (34) 273. "cracking" of, (36) 673; (37) 176.	microflora of, (32) 473.
factors affecting water content of curd, (30)	or Brinsen, analyses, (28) 278. ripening, (30) 275.
179.	making, (26) 479; (33) 175; (34) 573; (36) 574.
faulty "Knijpers" in, (30) 179. investigations, (27) 678.	making— at Lodi Experiment Station, (29) 777.
preparation, (37) 373.	Bacillus bulgaricus in, (31) 772.
Emmental— bacteria in, (31) 478, 772.	experiments, (27) 779; (30) 76; (31) 675, 875. (34) 875.
composition, (28) 278.	experiments in Quebec, (36) 574.

707; (34) 407; (39) 8, 501, 607	insects affecting, (26) 553; (30) 753; (33) 440; (38) 460, 843; (39) 257, 259. localization of acids and sugars in, (36) 110.
writings of J. von Liebig, (32) 109.	460, 843; (39) 257, 259.
Chemotherapeutic substances, action of, (35) 380,	maraschino, labeling, (26) 762.
901	marketing by parcel post, (39) 543.
Chemotherapy— address on, (31) 177. notes, (26) 677. oxidotherapy, new method, (38) 585. Chemotropism in rootlets, (32) 128. Chemodium—	marketing by parcel post, (39) 543. Monilia affecting, (26) 849.
address on, (31) 177.	new, descriptions, (29) 838; (31) 337; (33) 238; (35) 37.
ovidotherapy, new method, (38) 585.	of Germany, (33) 838,
Chemotropism in rootlets, (32) 128.	of Japan, (35) 343, 645, 743.
	of New York, (33) 439.
album—	of Germany, (33) 838. of Japan, (35) 343, 645, 743. of New York, (33) 439. oriental peach moth injury, (40) 756.
analyses, (33) 70, 466; (34) 39. dissemination by farm animals, (26) 839. feeding value, (33) 70. amaranticola, culturo experiments, (30) 632.	pear slug affecting, (26) 863. pear thrips affecting, (27) 156; (40) 547.
feeding value, (33) 70.	picking and handling, (34) 437. pollination, (30) 443; (34) 233, 341; (36) 139; (40)
amaranticola, culturo experiments, (30) 632.	pollination, (30) 443; (34) 233, 341; (36) 139; (40)
antheiminicum, notes, (30) 140.	148, 638. preservation by freezing, (39) 344.
effect on defecation, (40) 477. nuttallise n.sp., description, (40) 728.	pruning, (30) 739; (32) 837; (40) 742.
oil as a cardiac stimulant, (36) 576.	nriining and training (37) 344
as a vermifuge, (38) 883.	respiration in gases, (29) 135, 538.
as an anthelmintic, (37) 578.	ringing experiments, (32) 636.
composition, (28) 506. effect on circulation and respiration, (34)	Scierotinia affecting, (28) 649. seedling, variation in, (30) 144.
476.	self-sterility in, (40) 148.
effect on intestinal contractibility, (34) 381	sod mulch v. clean culture, (33) 43.
studies, (39) 585 quinos, studies, (39) 610.	spray schedules, (39) 39, 140. spraying, (37) 744.
Cherimoya—	spraying, dust v. liquid, (37) 832.
asexual propagation, (32) 143.	spraying experiments, (27) 143, 439; (28) 436;
composition, (35) 663.	(30) 641. standard package for, (34) 438.
notes, (27) 242.	promittee of boomes to very fact ands

Cherries—Continued.	Cherry—Continued.
stock for, (40) 445. sunburn of, (29) 547.	leaves, free hydrocyanic acid in, (27) 635
sunburn of, (29) 547.	little leaf, studies, (32) 238. mildew, notes, (40) 53.
treatise, (32) 338.	midew, notes, (40) 55.
tree census in Washington, (40) 340. varieties, (32) 538; (33) 637; (36) 237; (37) 241.	moth, notes, (35) 56. orchard soils, chemical and biological notes,
varieties—	(33) 640.
for home orchard, (40) 341.	pits, oils of, (39) 8. powdery mildew, investigations, (33) 347. rot, treatment, (38) 541.
Indiana, (39) 447.	powdery mildew, investigations, (33) 347.
New Jorsey, (33) 439.	rot, treatment, (38) 541.
New Jorsey, (33) 439. Ohio, (37) 241.	sawiiy leaf-miner—
Pacine Northwest, (29) 745.	notes, (28) 158; (29) 252.
western Washington, (33) 44	studies, (34) 456, 657.
in Oklahoma, (27) 241. resistant to disease, (29) 246. variety for Oregon, (39) 241. winter injury, (32) 43; (40) 835. winter injury of buds, (39) 541.	shothole, notes, (35) 454. slug, see Eriocampoides limacina.
resistant to disease, (20) 240.	soft scald, studies, (39) 855.
winter injury (32) 43: (40) 835.	stocks, effect on scion, (28) 541.
winter injury of buds. (39) 541.	stones, hydrocyanic acid content, (27) 11.
Cherry-	"stop-back," relation to tarnished plant bug,
aphis—	(40) 455.
alternate hosts, (39) 464.	tent-maker or tortrix, notes, (26) 856.
notes, (32) 651; (40) 648.	tree trunks, introduction of solutions into, (36)
predatory enemy of, (30) 459.	740.
secondary host, (38) 58.	tree ugly nest tortricid, natural control, (40) 62.
studies, (39) 158, 360. bacterial—	twigs, composition, (26) 407. weovil, oviposition, (39) 363.
canker, notes, (34) 351.	wild, poisoning stock, (39) 386.
disease, notes, (28) 746.	wine, preparation, (27) 412.
disease, studies, (38) 551.	witches' brooms, studies, (37) 250,
black knot—	witches' brooms, studies, (37) 250. worm, ugly nest, notes, (34) 752; (36) 856.
description and treatment, (38) 853.	yellow leaf—
notes, (37) 555.	description and treatment, (30) 848.
studies, (32) 52.	studies, (33) 347.
blight, notés, (34) 648. blister disease, notes, (34) 543.	Chess seed, analyses, (29) 307.
brown book and an (20) 251	Chestnut—
brown bark spot on, (39) 251. brown rot—	bark disease—
notes (28) 511: (34) 241: (35) 351	control, (26) 146; (27) 252, 354. control in Massachusetts, (28) 643; (30) 743. dissemination by insects, (35) 756. history and distribution in Massachusetts,
notes, (28) 544; (34) 241; (35) 351. or gummosis, treatment, (38) 454.	dissemination by insects. (35) 756
spraying, (39) 652.	history and distribution in Massachusetts.
studies. (31) 749.	(26) 551.
spraying, (39) 552. spraying, (31) 749. treatment, (23) 244; (40) 154. by-products, utilization, (34) 808.	in British Columbia, (31) 845.

Colored solutions, acidimetry of, (39) 503. Colorimeter—	in Canada, (31) 401. meat supply of United States, (30) 96.
description, (35) 612.	Commodities—
dilution, description, (32) 20. Duboseq, converting into nephelometer, (34)	prices in Tokyo, (28) 491. prices of, (26) 359.
503.	prices of in 1912, (29) 190.
new form, (39) 503. observations, source of error in, (34) 805.	trend of prices since 1890, (26) 689. Communal kitchens in Europe, (39) 367.
Colorimetric determination of organic substances,	Community—
(40) 712. Colorimetry, new apparatus for, (37) 803.	and national life, lessons in, (40) 197.
Coloring—	center, functions and organizations, (39) 690. centers, suggestions for, (36) 92.
extracts, preparation, (30) 615. matter, detection in—	development, plan, (38) 694.
edible fats, (31) 811.	gardens—see also Gardens. supervising, (31) 195.
fruit juices, (28) 608.	improvement—see also Rural communities.
edible fats, (31) 811. fruit juices, (28) 608. milk, (37) 131. tea, (30) 207.	clubs, (31) 690. markets, (39) 894.
matter— elimination by the udder, (30) 474.	school building at wheaton, Minnesota, (37)
photodynamically active, effect on plant	793. service week in North Carolina, (32) 388.
cells and fissues, (34) 223.	Compass plants, leaf position, (28) 228.
photodynamically active, effect on plant cells and tissues, (34) 223. plant, chemistry, (27) 310. separation, (27) 497.	Complement— action, studies, (33) 280.
Colors— artificial, use in food products, (29) 661.	binding test, diagnostic value, (26) 283.
comparison, (32) 20. effect on plants, (28) 36.	effect of arsphenamin and mercuric chlorid on, (40) 287.
Colostrum—	fixation—
analyses, (26) 80; (38) 780.	as affected by temperature, (37) 688; (38) 79. effect on protein metabolism, (30) 478.
as affected by parturition, (37) 172. biochemistry, (27) 208.	in tuberculosis, (40) 481, 886, 887.
bodies, biology, (32) 80. catalytic activity, (29) 717. cell content, (28) 370.	in tuberculosis, (40) 481, 886, 887. mechanism of, (30) 276.
catalytic activity, (29) 717.	nonspecific, studies, (34) 779. preparation of bacillary extracts for, (30)
change into normal milk, (38) 780.	281.
chemistry of, (31) 573. detection, Schardinger reaction, (26) 211.	reactions, value, (26) 180. relation to precipitins, (30) 478.
hemolytic power. (27) 208, 811.	studies, (39) 80, 284.
human, antibody content, (29) 778. investigations, (28) 18.	fixation test— antigens containing cholesterol for, (32) 272
notes, (26) 161, 673.	diagnostic value for abortion in cows, (29)
proteins of, (37) 8. toxic character in milk fever, (27) 185.	586. multiple pipette for, (35) 680.
Colpitis granulosa, causative agent, (26) 285.	pipette holder for, (40) 581.
Colpitol, description, (30) 578.	utilization, (26) 676. fixation with protein substances, (40) 286.
Colpoda cucullus— bactericidal power, (27) 317.	preservation, (38) 80; (39) 584.
bactericidal power, (27) 317. prevalence in soils, (29) 622; (32) 619. Colf shows, directions for, (33) 697.	Compositae, pollen-presentation mechanism, (34) 727; (38) 225; (39) 29.
Colts	Composts—
breaking and training, (33) 271.	as an aid to soil building, (36) 197. inoculation with soil, (36) 516.
draft, developing, (29) 773; (34) 175. feed cost, (39) 168.	of plant materials, Philippine, (39) 523.
newborn, weakness in, (39) 187. Cult's foot brown leaf spot, studies, (26) 852.	preparation, (30) 520. Compression, effect on root structure, (32) 825.

Compalium	Congreto-Continued
Compsilura— concinnata, dispersion in New England, (33)	Concrete—Continued. oil-mixed—
254.	description and use, (28) 85.
concinnata, notes, (37) 459, 764. oppugnator n.sp., description, (31) 456.	tests, (30) 487, 889; (33) 685. overwet, tests, (31) 387.
Compsomyia macellaria, relation to myiasis aurium,	pavements—
(31) 777. Comstockiella sabilis in California, (37) 563.	cracking and buckling, (38) 891. design, (36) 890.
Conarachin, chemistry of, (37) 8, 501.	design, (36) 890. failure of, (30) 386. for roads, (33) 685.
Concanavalin—	stresses on, (31) 186.
chemistry of, (37) 8 studies, (40) 308.	tests, (30) 387. use of hydrated lime in, (31) 387.
Conchaspis angrocci—	permeability tests. (32) 788.
notes, (27) 255.	pipe for irrigation, (36) 583.
on vanilla, (40) 56. Conchita peluda, culture, (31) 736.	pipe, reinforced, tests, (31) 781. Portland coment, proportions (39) 86
Conchuela affecting Sudan grass, (33) 717.	pormeability tests, (32) 788. pipe for irrigation, (30) 583. pipe, reinforced, tests, (31) 781. Portland cement, proportions, (39) 86. posts, mold for, (32) 788. preparation and tests, (35) 790.
Concrete— aggregates for, (34) 87, 485, 685.	preparation and tests, (35) 790. pressure pipe, construction and tests, (23) 484.
aggregates, specifications, (36) 683.	proportioning, (29) 386; (32) 484. protection against destructive agents, (29) 386.
aggregates, tests, (31) 91; (38) 593. amount of water for, (35) 493.	protection against destructive agents, (29) 386. protective coatings for, (31) 784.
arch bridges, internal temperature range, (29)	reinforced—
786.	as affected by salt in warm climate, (40) 787. construction, treatise, (31) 186.
as affected by—	designing and estimating for, (31) 290.
acids, oils, and fats, (29) 184. alkali, (32) 381, 787. alkali salts and sea water, (29) 686.	for farms, (27) 589.
alkali salts and sea water, (29) 686. calcium chlorid, (36) 286.	shrinkage and time effects in, (34) 787. treatise, (27) 688.
hydrated lime, (31) 687.	reinforcement bars, strength tests, (36) 684.
hydrated lime, (31) 687. hydrogen sulphid, (28) 589.	resistance to wear, (34) 484. roads—
molsture. (27) 891. salts, (30) 589.	and pavements, treatise, (30) 386.
Suage, (32) 590.	bituminous coatings for, (38) 692. construction, (27) 386; (31) 289, 290; (33) 781, 782, 890; (35) 390, 492; (36) 285; (39) 687. construction, standards for, (31) 289.
various substances, (29) 891. as protection for wood-stave pipe, (34) 890.	782, 890; (35) 390, 492; (36) 285; (39) 687.
beams, reinforced, design, (28) 86.	construction, standards for, (31) 289. contraction and expansion of, (31) 290; (37)
beams, reinforced, design, (28) 86. blast-furnace slag, tests, (39) 87. blocks, machines for, (26) 91; (30) 487.	
bridges—	design. (36) 890.
construction, (32) 686.	expansion, (31) 290.
reinforced, test, (31) 91. specifications, (34) 685.	gradation of aggregates for, (35) 584; (37) 787. hydrated lime for, (34) 787: (35) 86
treatise, (30) 788.	in New York, (27) 890.
buildings, reinforced, tests, (30) 293. chute for water, (33) 586.	cracking, (31) 185; (35) 492; (37) 88. design, (36) 890. expansion, (31) 290. gradation of aggregates for, (35) 534; (37) 787. hydrated lime for, (34) 787; (35) 86. in New York, (27) 890. in Outarlo, (33) 289. in Wayne Co., Michigan, (27) 789. measuring wear of, (34) 787.
coating with tar, (34) 889.	measuring wear of, (34) 787. mixtures for, (37) 490.
construction—	mixtures for, (37) 490. of Lake County, Ohio, (36) 384.
college instruction in, (36) 400; (38) 95. for gardens and lawns, (27) 645.	pamphlet, (30) 589.
inspection, treatise, (30) 487. manual, (32) 188.	reinforcement for, (36) 587.
on livestock farms, (27) 89.	resistance to wear, (34) 484. roller finishing, (38) 189.
treatise, (27) 484; (30) 188.	specifications, (34) 685. specifications and construction, (30) 290.
work in cold weather, (29) 291. culverts—	treatise, (30) 386.
cost data, (37) 885. plans, (32) 485, 686, 884. specifications, (33) 291.	treatise, (30) 386. sand for, (32) 484. sand for, testing, (31) 386.
plans, (32) 485, 686, 884.	sand, grading, (38) 389.
destruction by moor water, (31) 290.	screened gravel for, (39) 87.
draintile—	silos, handbook, (26) 790. slab bridge design, (40) 189.
as affected by alkali, (34) 87, 584. construction, (34) 685.	slab bridge design, (40) 189. slabs, reinforced, loads for, (35) 86. slabs, reinforced, tests, (35) 290; (36) 788; (38)
durability, (35) 386; (39) 393.	490.
reinforced, tests, (40) 787.	slabs, tests, (38) 189, 289.
drilling as a test for, (30) 787. durability in alkali solls. (39) 86; (40) 386.	strength as affected by— moisture, (29) 487.
durability in alkali solls, (39) 86; (40) 386. effect of too much water in mixing, (29) 386.	saturation, (30) 203.
effect of varying the percentage of water in, (33) 292.	temperature, (34) 880. water, (37) 490.
electrolysis of, (28) 589.	strength, tests, (34) 685.
expansion and contraction, (37) 884. farm buildings, construction, (32) 888.	tile, tests, (26) 685. treatise, (28) 186; (35) 289, 390; (36) 285; (37) 590.
fence posts, construction, (28) 200; (31) 487, 685.	use in drainage and irrigation, (32) 787.
flat slabs, design, (34) 685. flow under sustained loads, (38) 290.	use in farm buildings, (28) 487; (29) 689. use in irrigation, (37) 281.

Cotton—Continued.	Cotton—Continued.
stainer— control, (40) 256. effect on germination of cotton seed, (26)	wiit— and root knot, notes, (34) 643. notes, (28) 241; (29) 446; (30) 538; (31) 641;
534. life history and remedies, (38) 461.	notes, (28) 241; (29) 446; (30) 538; (31) 641; (32) 342, 543; (34) 50; (38) 351, 547. resistant strains, (40) 235, 287.
muscoid parasites of, (29) 358. notes, (27) 256; (37) 460, 550, 847; (39) 559,	233.
life history and remedies, (38) 461, muscoid parasites of, (29) 358, notes, (27) 256; (37) 460, 550, 847; (39) 559, 639, 754, 862; (40) 165, 261, 854, on citrus, (40) 363, studies, (28) 454; (36) 654,	studies, (28) 746; (35) 846. treatment, (26) 846. wireworm—
West indian, notes, (59) 559, 055,	notes, (32) 555; (35) 467.
staining, notes, (35) 44. stalk cutter, description, (26) 95; (34) 163. stalks—	slender, studies, (30) 545. studies, (33) 63, 158. worm—
composition and use, (27) 727. conversion into charcoal, (32) 449.	Egyptian, remedies, (28) 355.
for cattle, (38) 371. plowing under, (38) 234.	in Egypt, (30) 252. natural enemies, (27) 862.
silage from, (38) 371.	notes, (27) 554, 756; (34) 62. notes and remedies, (28) 60.
statistics in United States, (33) 894. stem borer, notes, (27) 53.	remedies, (26) 757. studies, (27) 556.
stem weevil, notes, (40) 553.	yield as affected by—
subsoiling experiments, (28) 827; (31) 131. substitute crops for, (32) 594.	rate of seeding, (27) 434, source of seed, (32) 226.
substitute crops for, (32) 594. substitutes, notes, (26) 835. supply and distribution, (28) 390	water level, (30) 232; (31) 229, 230. yield in relation to—
supply and distribution, (28) 390. thinning experiments, (35) 135, 337; (37) 29;	density of stand, (33) 133.
(40) 433. topping experiments, (26) 233; (27) 433; (29) 35;	potash scarcity, (40) 335. yield under boll weevil conditions, (27) 34.
(35) 135.	yields, (29) 32.
trade, manual, (34) 595, 691. trade, treatise, (31) 690.	Cottonseed—see also Cotton seed. by-products, effect on composition of milk, (33)
trade, treatise, (31) 690. treatise, (26) 437; (28) 631; (29) 738; (31) 525, 735; (32) 434; (33) 433; (35) 230, 639; (40) 526.	274.
upland—	cake— agglutinating properties, (31) 774.
chemistry of, (39) 411. classification, (37) 830.	agglutinating properties, (31) 774. analyses, (26) 767, 809; (27) 170, 371; (28) 464; (29) 367; (30) 169; (31) 863; (33) 665; (34) 169, 467; (36) 765; (37) 873; (38) 369; (39)
long staple, spinning tests, (31) 631.	169, 467; (36) 765; (37) 873; (38) 369; (39)
use and influence, treatise, (36) 894. use by prehistoric Americans, (38) 167.	370, (40) 371.
variation in, (38) 340. variation with a self-fertilized ancestry, (26)	cake, cold-pressed— analyses, (26) 468; (28) 464; (31) 863; (32) 169;
834.	(34) 169, 263, 467; (36) 268; (38) 369; (40) 72, 571.
varietal differences in fruiting processes, (40) 235.	digestibility, (31) 863.
235. varieties, (28) 233, 535, 631, 733, 786, 828; (27) 35, 136, 337, 340, 433, 837; (28) 230, 533, 534, 828, 832; (29) 31, 32, 35, 428, 430, 534, 738, 830; (30) 229, 232, 338, 434, 525, 635, 731, 734, 831; (31) 133, 136, 432, 524, 525, 635, 731, 734, 831; (32) 323, 732, 62, 227, 229, 332, 526, 631, 734, 829; (33) 529, 834; (34) 830, 831; (33) 134, 135, 136, 830; (34) 735, 832; (37) 35, 329, 335, 636, 642, 728, 731, 823, 824, 825; (38) 31, 230, 233, 334, 336, 430, 433, 533, 634, 829, 830, 832; (39) 32; (40) 437, 438.	for dairy cows, (35) 872. from bolly seed, analyses, (36) 765.
832; (29) 31, 32, 35, 426, 430, 534, 738, 830;	cake-
(30) 229, 232, 338, 434, 525, 635, 731, 734, 831; (31) 133, 136, 432, 524, 525, 628, 631, 732, 733,	digestibility, (38) 168. effect on composition of butter, (36) 873.
829; (32) 87, 226, 227, 229, 332, 526, 631, 734, 829;	effect on milk and butter, (34) 570.
830; (36) 735, 832; (37) 35, 329, 335, 636, 642,	Egyptian, digestibility, (36) 765. feeding value, (26) 468.
728, 731, 823, 824, 825; (38) 31, 230, 233, 334, 336, 430, 433, 533, 634, 829, 830, 832; (39) 32; (40) 437.	fertilizing value, (26) 631; (27) 337: (28) 42; (38) 220, 527.
	for cows, (29) 577.
for weevil conditions, (40) 235, 236, 237.	for range flocks, (39) 172. for sheep and steers, (29) 169.
in Brazil, (37) 441. in Italian Somaliland, (37) 336.	nutritive value, (28) 673. residual manurial value, (39) 530.
variety—	v. cold pressed cottonseed cake for cattle,
new and prolific, (33) 232. relation to oil content of seed, (40) 238.	(34) 170. v. soy bean cake for cows, (29) 172.
tests, (39) 128, 337, 433, 528, 637, 835; (40) 230, 231, 234, 237, 328, 332, 335, 433, 437, 523,	v. soy bean cake for cows, (29) 172. feed, analyses, (27) 669, 774; (28) 572; (30) 68, 565; (31) 366, 467, 564, 663; (32) 169, 666; (36) 268, 765; (37) 471; (38) 368, 369, 572; (39) 167, 270, 370, 773; (40) 72, 571, 665.
624, 625.	268, 765; (37) 471; (38) 368, 369, 572; (39) 167,
Verticillium albo-atrum on, (33) 244. volunteering experiments, (32) 226.	270, 370, 773; (40) 72, 571, 665. feed meal, digestibility. (31) 766.
warehouse law in Arkansas, (38) 294. warehouses—	feed meal, digestibility, (31) 766. flour as food for man, (31) 855. flour, use in bread making, (27) 268; (34) 762.
accounts for, (37) 594.	hull bran, analyses, (32) 666.
construction, (33) 784. in the South, (33) 191.	hulls—
regulations, (38) 895.	analyses, (28) 169, 464; (30) 169; (32) 169; (34) 263; (36) 268, 615.
water requirement, (26) 631; (32) 127, 226; (37) 29; (40) 236.	composition and digestibility, (32) 666. detection in cottonseed meal, (30) 115; (33)
wax, notes, (26) 114. weather conditions for, (37) 316.	16.
weevil resistance in, (26) 41.	digestibility, (31) 863. feeding value, (39) 272; (40) 666.
weevils in Peru, (32) 658. weevils, notes, (29) 562.	lintless, for cows, (38) 681. screenings, analyses, (26) 468.
white scale—control, (28) 159.	v. silage for steers, (31) 469; (32) 260, 568.
In Peru, (29) 004.	meal-
parasites of, (26) 247. wild—	acidity, (35) 770. amino acid in, (33) 665.
as host plant of cotton boll weevil, (30) 57.	ammonification, (34) 127. ammonification in soils, (33) 808.
insects affecting, (31) 350; (33) 57. of Arizona, description, (31) 633.	ammonification studies, (32) 817.

```
Cottonseed—Continued.

meal—continued.

phosphorus compounds in, (29) 804; (37) 502; (40) 772.

physical changes during digestion, (39) 476.

phytic acid in, (30) 707.

production and use, (27) 327.

rations for steers, (28) 71; (29) 667.

relation to citrus chlorosis, (39) 458.

sugar content, (37) 208.

toxic properties, removal, (28) 270.

toxicity, (20) 780; (27) 78; (28) 197; (29) 76, 477; (31) 578; (32) 80; (33) 311; (34) 79, 381, 474, 476; (35) 383, 682; (37) 00, 689; (38) 282; (38) 174, 373, 478.

toxicity, neutralizing, (37) 680.

v. beef scrap for chicks, (30) 571; (31) 473.

v. coconut meal for cows, (30) 170.

v. soy-bean meal for cows, (30) 576; (36) 563; (38) 680.

nt cake, feeding value, (39) 775.

oil, accessory growth substance in, (38) 265.

chemical and physiological tests, (33) 362.

composition, (32) 313.

content, relation to variety, (40) 238.

detection, (26) 508; (27) 207, 497; (29) 613, 798; (37) 13; (38) 616.

digestibility, (36) 800; (40) 208.

effect on composition of milk fat, (35) 775.

for calves, (20) 170, 668.

hardened, analyses and digestibility, (33) 564.

hydrogenated, digestibility, (34) 659.
Cottonsced—Continued.

meal—continued.

analyses, (26) 72, 165, 266, 325, 362, 363, 369, 468, 469, 568, 665, 714, 728, 768, 770, 873; (27) 68, 170, 171, 371, 469, 570, 669, 670, 774, 775, 872; (28) 169, 224, 205, 364, 464, 405, 571, 627, 669, 769; (29) 270, 271, 367, 467, 567, 665, 769; (30) 67, b8, 109, 496, 467, 565, 670, 868; (31) 73, 168, 366, 467, 479, 564, 663, 563; (32) 169, 229, 568, 607, 862; (33) 71, 371, 568, 665, 759, 870; (34) 72, 169, 203, 371, 420, 467, 566, 665, 727, 767; (35) 273, 374, 562, 867; (36) 65, 167, 268, 571, 667, 765; (37) 220, 268, 471, 707; (38) 67, 368, 369, 376, 572, 665; (39) 70, 167, 270, 370, 773; (40) 72, 470, 571, 665.
                                                                       665.

Ayrshire, relation between amount and com-	deating drinking water for, (28) 175
position of milk produced, (29) 876.	Height measurement, (33) 2/4.
balanced rations for, (26) 774. balanced v. unbalanced rations for, (28) 174.	high milk producing, notes, (34) 472. high milk producing, records of, (26) 476. high milk producing, sterility, (40) 374.
barley for, (40) 878.	high milk producing, records of, (20) 470.
body weight and milk yield, relation, (32) 267.	Holstein-Friesian—
bone growth, horn development, and perform-	official tests, (40) 773.
ance in, (32) 266.	official tests, (40) 773. 7-day tests, (40) 774.
breeding for high production, (29) 375.	home-grown v. purchased feeds for, (36) 872.
breeds and origin, textbook, (39) 881.	home-grown v. purchased feeds for, (36) 872. imported in New South Wales, (27) 277. improvement in Victoria, (36) 572.
Brown Swiss, milk production, (30) 572. cacti for, (31) 77; (33) 766.	in Tapon (99) 270
calving, fall and spring, milk yield of, (31) 770,	in Japan, (28) 370. in tick-infested regions, blood of, (26) 382.
771.	in United States, (28) 390; (31) 73.
care and management, (29) 775, 876; (30) 678;	individuality, (26) 95.
(31) 272, 299; (36) 473.	individuality, (26) 95. inheritance of milking qualities in, (26) 169.
chopped alfalfa v. bran for, (39) 783.	irrigated pastures for, (36) 173.
coconut meal for, (39) 676.	Jersey and Holstein, economy of production,
competition, (35) 674; (40) 375. concentrated v. bulky rations for, (28) 174.	(38) 277.
conformation and milk yield, (28) 878; (31) 76,	judging, (26) 597; (27) 375; (29) 577, 673; (36) 194,
573; (33) 78; (34) 379.	473.
conformation of, (26) 574.	Kerry and Dexter, milk and fat records, (37)
correlation between form and function, (29)	172.
473; (30) 271.	labor requirements, (36) 790.
cost of feeding by breeds, (34) 181.	large v. small for milk production, (34) 773.
cost of raising, (30) 472; (32) 574; (34) 472, 671;	leguminous feed for, (38) 681; (40) 374.
(38) 679.	lime requirements, (31) 864.
dairy breeds, (38) 376. "dairy temperament," (39) 279. difficult parturition in, (26) 381.	maintenance requirements, (26) 475; (30) 773. maintenance standard, (31) 673.
difficult parturition in. (26) 381.	management on a small holding, (30) 90.
digestion experiments, (26) 475; (30) 774; (38)	measurements, (28) 873.
digestion experiments, (26) 475; (30) 774; (38) 73; (39) 75, 381.	metabolism experiments, (27) 775.
dried yeast for, (33) 467.	milk flow as affected by dipping, (35) 878. milk production, see Milk production.
economy of production, (38) 277.	milk production, see Milk production.
effect of— fetness on fet content of milk (27) 220	milk vein system in relation to production, (38)
fatness on fat content of milk, (27) 280.	476.
fetal growth on milk production, (29) 577. work on milk yield and fat content, (30)	milking tests. (27) 676: (29) 373, 375: (32) 75.
475.	mineral metabolism. (35) 481; (36) 297; (37) 169;
efficiency table, (37) 775.	milking capacity, transmission, (32) 174. milking tests, (27) 676; (29) 373, 375; (32) 75. mineral metabolism, (35) 481; (36) 297; (37) 169; (38) 374, 779; (40) 373.
factors affecting development, (33) 274.	mortanty tables, (21) 515.
factors affecting growth and dairy qualities, (34)	newly lactating, detection, (31) 180.
378.	normal flora of genitalia, (28) 885.
fattening, (33) 175. feed rations for, (31) 77.	nutrients returned by, (38) 376. oestral period as affecting production, (39) 882.
feed requirements. (27) 374.	on general farms, (40) 574.
feed unit system for, (28) 74. feeding, (26) 273; (27) 877; (29) 276, 473, 575, 577; (32) 173; (33) 275, 673; (34) 209, 694; (35) 378,	on Para grass pasture, (40) 366.
feeding, (26) 273; (27) 877; (29) 276, 473, 575, 577;	on pasture, concentrate feeding, (40) 877.
(32) 173; (33) 275, 673; (34) 209, 694; (35) 378,	open shed v. closed stable for. (30) 676; (34) 181
674. feeding experiments, (26) 170, 266, 267, 273, 369, 467, 488, 476, 673, 879; (27) 280, 374; (28) 174, 175, 265, 363, 371, 372, 572, 877, 878; (29) 172, 277, 373, 374, 475, 575, 576, 774, 775; (30) 175, 176, 177, 375, 573, 576, 773, 774, 874; (31) 77, 173, 673, 771; (32) 08, 74, 168, 258, 265, 266, 367, 470, 573, 866, 672, 773, 571; (33) 77, 170, 174, 381, 382, 575, 674, 765, 766, 872; (34) 180, 181, 182, 269, 471, 683, 670, 671, 773, 774, 873; (35) 174, 481, 562, 671, 673, 871, 872; (36) 75, 173, 174, 273, 374, 571, 669, 765, 772, 871, 872, 875; (37) 75, 169, 171, 372, 882,	182; (35) 571; (38) 277; (40) 177. osage oranges for, (36) 374. outer milk signs, (27) 675.
10001ng experiments, (26) 170, 260, 267, 273, 369,	osage oranges for, (36) 374.
175 265 263 271 272 572 277 278 (20) 174,	perturition diagnosing time of (31) 876
277, 373, 374, 475, 575, 576, 774, 775; (30) 175,	parturition, diagnosing time of, (31) 876. pasturing, (40) 575.
176, 177, 375, 573, 576, 773, 774, 874; (31) 77, 173,	pasturing experiments, (37) 271; (38) 175; (39)
673, 771; (32) 68, 74, 168, 258, 265, 266, 367, 470,	pasturing experiments, (37) 271; (38) 175; (39) 272, 474, 879; (40) 374.
573, 666, 672, 773, 871; (33) 77, 170, 174, 381, 382,	pasturing v. stable feeding, (37) 574.
575, 574, 705, 766, 872; (34) 180, 181, 182, 269, 471,	pine needles for, (28) 768.
000, 070, 071, 770, 774, 010, (00) 174, 401, 302, 071, 679, 971, 979, 728, 75, 173, 174, 979, 974, 571, 660	poisoning with box enter, (37) 50.
765 779 871 879 875 (37) 75 160 171 379 689	poisoning with box elder, (37) 80. protection from flies, (37) 260. protein requirements, (31) 173; (38) 74; (40) 572.
765, 772, 871, 872, 875; (37) 75, 169, 171, 372, 682, 683, 766, 872; (38) 66, 73, 168, 174, 277, 375, 477, 571, 678, 680, 681, 779, 876; (39) 75, 381, 482, 575,	pumpkins for. (38) 571.
571, 678, 680, 681, 778, 876; (39) 75, 381, 482, 575,	pumpkins for, (38) 571. rations for, (30) 169; (30) 374; (37) 195, 684.
782; (40) 573, 672.	records, see Dairy herd records.
feeding-	refuse brewers' yeast for, (33) 568.
experiments in Denmark, (33) 174. experiments, methods, (39) 380.	register-of-merit Jerseys, age factor in, (26) 166. register of production in Wisconsin, (39) 784.
	registration in Denmark, (30) 572.
for milk production, (29) 577. in summer, (30) 875.	relation between milk and fat yields, (27) 574.
in the South, (32) 574.	resistance toward tubercle bacilli, (27) 383.
in winter. (30) 73.	respiration experiments, (39) 676.
standard for, (30) 774; (34) 670. fish meal for, (29) 270; (35) 769.	retained placenta, cause and treatment, (36)
nsn meal for, (29) 270; (35) 769.	675.
noacing 110s, (21) 115.	rice-gluten meal for, (32) 266.
forage crops for, (37) 599.	rolled barley for, (39) 783. rutting, studies, (26) 367; (27) 672.
genital organs and udder, bacterial flora, (39) 383.	salt requirement, (40) 775.
gestation and sterility in, (39) 279.	salt requirement, (40) 775. school lessons on, (32) 494.
gestation period, (28) 466; (33) 171.	score cards for, (28) 775; (37) 172.
giving abnormal milk, detection, (26) 87.	selecting by score card totals, (40) 872.
grain rations, (40) 574.	selection and feeding, (29) 577.
grapevines for, (31) 72.	Shorthorn, cost of milk production, (39) 182.

Cows-Continued.	Cranberries—Continued.
silage crops for, (38) 174	apparatus for investigating nutrition of, (26) 196. as affected by copper fungicides, (28) 247.
slop-fed, milk from. (26) 370. soilage v. sılage for, (27) 68; (30) 874; (34) 671.	benzoic acid in, (33) 15.
sterility and abortion in, (32) 82. sterility in, (36) 777; (37) 379. succulent teed for, (26) 574.	breeding experiments, (33) 637; (36) 443; (39) 749.
sterility in, (36) 777; (37) 379.	culture, (26) 841; (30) 643; (31) 712; (33) 736.
succulent teed for, (26) 574.	culture—
sugar-beet tops for, (33) 169. sunflower silage for, (38) 74; (39) 182.	experiments, (28) 838; (30) 142; (31) 441, 740, 835; (33) 341, 342; (36) 43; (39) 47.
sweet sorehum silege for (39) 71	in Canada, (36) 240.
sweet sorghum silage for, (39) 71. testing, (27) 375; (32) 575; (36) 773; (38) 74.	in Massachusetts, (36) 141.
testing in Argentina, (36) 673.	in Wisconsin, (34) 42.
testing, rules for, (34) 76, 182.	effect on composition of urine, (31) 761.
tests of breeds, (30) 73.	false blossom of, (31) 840; (36) 240.
tests, one-v. two-day, (31) 871, 872. tests, 7-day v. yearly, (35) 481.	fertilizer experiments, (26) 840; (28) 341; (30) 143; (31) 441, 741, 835; (32) 541; (33) 341; (34) 150, 834; (36) 44, 641; (37) 745; (39) 48, 748.
tuberculous-	(36) 44, 641; (37) 745; (39) 48, 748.
eradication, (28) 675.	1mprovement, (311 741; (30) 338.
relation to human health, (29) 382.	insects affecting, (26) 840, 857; (28) 341, 352, 752, 854; (30) 154; (31) 752; (33) 351, 352; (35) 55;
udders, see Udder. uringlysis, (28) 81.	(36) 54; (37) 53; (38) 460; (39) 60; (40) 753.
utilization of protein and energy rations, (39)	irrigation, Skinner system, (28) 341.
75, 381.	irrigation, Skinner system, (28) 341. liming experiments, (31) 442; (39) 48, 749.
vegetable-ivory meal for, (36) 368.	pollination experiments, (26) 840, 858; (30) 143;
water requirements, (40) 774. water supplies for, (35) 189.	(31) 741. protection against frost, (26) 514; (31) 740;
watering, (38) 374, 680.	(33) 341; (36) 43.
watering, (38) 374, 680. wild onion poisoning, (40) 577.	root growth, (33) 311.
winter fodder for, (29) 577.	Scandinavian, desiccation, (32) 117.
wintering experiments, (28) 266.	seeds and seed oil of, (30) 803.
Wisconsin Register of Production, (40) 774. Coyote—	shipment, (39) 750. spoilage, (39) 56.
parasites, notes, (32) 185.	spoilage after picking, (34) 252; (37) 745; (39) 749.
proof pastures for sheep, (26) 73.	spraying experiments, (31) 741; (39) 55.
Coyotes	standard barrel for, (32) 499.
combating, (39) 59.	storage experiments, (30) 143; (36) 43; (39) 47,
host of spotted fever tick, (26) 64. relation to Rocky Mountain spotted fever, (27)	749. varieties, (28) 341.
479.	Cranberry—
spreading disease among, (32) 480.	blight, cause, (33) 342. blossom end rot, notes, (30) 143.
Crab apple—	blossom end rot, notes, (30) 143.
Amur, description, (30) 640. blight, notes, (34) 648.	blossoms, fertilization, (28) 341.
brown bark spot on. (39) 251.	bogs— constructing and planting, (26) 841.
brown bark spot on, (39) 251. brown rot, studies, (31) 749. butter, artificial coloration, (27) 809. rust, notes, (40) 53.	management, (27) 345. natural fertility of, (28) 324. of Wisconsin, frost and temperature conditions in, (26) 514.
butter, artificial coloration, (27) 809.	natural fertility of, (28) 324.
rust, notes, (40) 53.	of Wisconsin, frost and temperature con-
Crab apples— breeding experiments, (39) 346.	protection against frost, (27) 509
inoculation experiments with brown rot fungus,	protection against frost, (27) 509. seepage water from, (31) 718. temperature conditions in, (34) 715.
(33) 247.	temperature conditions in, (34) 715.
of upper South Carolina, (36) 140.	water supply, (39) 793.
seed production, (38) 245. varieties, (37) 142.	diseases— notes, (28) 341; (39) 55, 652.
varieties—	studies, (26) 840; (33) 350; (36) 51.
for Missouri, (40) 341.	studies, (26) 840; (33) 350; (36) 51. treatment, (30) 143; (31) 740; (32) 52, 53.
for Oregon, (39) 241.	dishes, sugar substitutes in. (40) 67.
in Oklahoma, (27) 241.	end rot, studies, (38) 252. fireworm, notes, (28) 854.
new, (39) 346. Crab grass—	fruit rots, studies, (28) 454.
as affected by soil acidity, (10) 125.	fruit worm—
as affected by soil acidity, (10) 125. eradication, (27) 733.	notes (34) 851
notes, (26) 361.	remedies, (30) 154; (39) 60.
Crab louse, studies, (39) 764. Crab, tarabagam, composition, (40) 171.	remedies, (30) 154; (39) 60. studies, (26) 857; (31) 453; (36) 54. fungus rots, studies, (39) 749.
Crabs—	girdler, see Crambus hortuellus.
as host of lung distome, (35) 384, 681; (36) 577.	industry, relation to Weather Bureau, (27) 539.
control, (39) 461.	leaf miner, notes, (34) 851.
creatin and creatinin content, (31) 760 destruction of cystols by (36) 853	rootworm, remedies, (39) 60. rootworm, studies, (33) 456.
destruction of oysters by, (36) 853. Cracker waste, analyses, (35) 562; (30) 773. Crackers, examination, (27) 165.	rot, studies, (39) 56.
Crackers, examination, (27) 165.	sous, limed, Azotobacter in, (40) 214.
Crambid moths, trap lights for, (37) 259.	spanworm, notes, (28) 854.
orambids— new, from United States, (37) 564.	spanworm, studies, (31) 453.
notes, (35) 659.	storage rots, (40) 252. studies, (40) 150.
Crambinae—	tip worm, notes, (34) 851.
of North America, (40) 168.	tip worm, studies, (39) 60.
of Nova Scotia, (40) 57. Crambus—	toad-bug, studies, (31) 156.
caliginosellus, notes, (28) 158.	vinehopper, notes, (38) 559. worm, blackheaded, see Eudemis vacciniana.
caliginosellus, studies, (31) 253.	Crane flies—
hemiochrellus, studies, (40) 168.	
hortuellus—	leaf-eating, life history, (40) 169.
	leaf-eating, life history, (40) 169. notes, (28) 160.
notes, (28) 352, 854; (34) 756; (40) 755.	leaf-eating, life history, (40) 169. notes, (28) 160. of North America, biology, (32) 153; (33) 561;
notes, (28) 352, 854; (34) 756; (40) 755. remedies, (26) 858; (30) 155. studies, (38) 59.	leaf-eating, life history, (40) 169. notes, (28) 160. of North America, biology, (32) 153; (33) 561;
notes, (28) 352, 854; (34) 756; (40) 753. remedies, (26) 885; (30) 155. studies, (38) 59. luteolellus, notes, (34) 752; (36) 856.	leaf-eating, life history, (40) 169. notes, (28) 160. of North America, biology, (32) 153; (33) 561; (35) 57. Oranes, North American, distribution and migra- tion, (32) 55.
notes, (28) 302, 804; (34) 708; (40) 753. remedies, (28) 858; (30) 155. studies, (38) 59. luteolellus, notes, (34) 752; (36) 856. Cranberries— acidity, (32) 110; (37) 714.	leaf-eating, life history, (40) 169. notes, (28) 160. of North America, biology, (32) 153; (33) 561;

Crataegus—	Cream—Continued.
inoculation experiments with brown rot fungus,	pasteurization—
(33) 247. mollis, after-ripening of seed, (28) 226.	and aging, effects on viscosity, (40) 81.
seeds, after-ripening studies, (29) 527.	cost, (30) 75; (34) 380. for butter making, (33) 473; (34) 775; (36)
variability and hybridization in, (36) 630.	for butter making, (33) 473; (34) 775; (36) 773; (37) 576; (38) 880; (39) 78, 785.
Crater National Forest, description, (26) 240.	paying for at cheese factories, (28) 278.
Craterellus cornucopioides, composition, (30) 805. Cratopus punctum, notes, (29) 858.	paying for at creameries, (29) 375.
Cratosomus sp., notes, (30) 657.	powder, manufacture, (35) 678. preservatives—
Cratotechus hoplitis n.sp., description, (26) 63.	analyses and detection, (26) 806.
Crawfish—	detection, (31) 811. tests, (27) 777.
as crop destroyers, (27) 550.	production—
destruction, (27) 551.	and care. (32) 575: (33) 383.
destruction in springs, (26) 654. studies, (27) 394.	and care. (32) 575; (33) 383. and grading, (37) 373. and inspection in New England, (34) 380.
Cream—	and inspection in New England, (34) 380.
acidity—	midel spring conditions, (37) 273.
as affected by neutralizers, (30) 75.	receiving stations, (40) 879. regulations in England and Wales, (27) 678.
relation to butter quality, (38) 281; (39) 679.	regulations in United States, (35) 800: (36) 874.
relation to Streptococcus lacticus, (33) 675. studies, (32) 872.	remade, (40) 802. ripened, bacteria in, (34) 672.
	ripened, bacteria in, (34) 672.
analyses, (26) 80, 171; (28) 178, 862; (30) 178; (33) 277.	ripening at low temperature, (31) 375. samples, care of, (28) 278.
as affected by molds, (39) 785.	sampling, (27) 208; (29) 879.
Babcock test, (40) 378.	scales, accuracy, (28) 278.
bacteria, heat resistance, (39) 78.	scoring, (35) 176.
bacteria, studies, (39) 78. buying, permit system, (27) 179; (29) 879.	separation, (28) 371; (33) 695; (36) 571; (40) 415. separation, theory of, (28) 776.
cakes, poisoning due to, (31) 555.	separator, description and tests, (27) 486.
care and handling, (27) 676; (32) 576; (35) 99. care of, (29) 673, 674, 777.	separators—
care of, (29) 673, 674, 777.	care, (32) 576; (36) 674. description, (29) 390; (34) 891.
care on the farm, (29) 71, 463; (32) 473; (33) 80; (36) 674, 775.	description, (29) 390; (34) 891.
cheese manufacture, (27) 375.	distribution of bacteria by, (32) 268.
chemical and bacteriological standards, (27)281.	notes, (27) 792; (30) 488. operation, (32) 874; (34) 891; (37) 576.
churnability, factors affecting, (29) 579.	tests, (28) 187, 385; (29) 88, 390; (34) 590.
churning experiments, (30) 274. classification at New York, (27) 678.	sour—
classimeter, description, (36) 875.	casein by-product of, (26) 81. of East Hungary, composition, (26) 171.
clean, (28) 194.	viability of typhoid bacillus in, (32) 675.
Ciotiea, (99) 869.	specific heat, (32) 715.
contests, (28) 176; (34) 874.	standardization, (26) 275; (27) 879; (29) 777; (35)
contests, educational value, (26) 478. contests in Michigan, (39) 383. cooling, (29) 696; (34) 572; (35) 874; (39) 382, 679. cooling tanks, construction, (37) 591. cost of distribution, (38) 177. cost of pasteuring (31) 188	378. stariliging (33) 473
cooling, (29) 696; (34) 572; (35) 874; (39) 382, 679.	sterilizing, (33) 473. storage, (32) 356.
cooling tanks, construction, (37) 591.	streptococci in. (28) 581.
cost of distribution, (38) 177.	sweet, selling, (27) 179. tables for blending, (33) 577.
cost of pasteurizing, (31) 188. desiccated, composition, (28) 113. desiccated, methods of analyses, (28) 113. Devonshire "clotted," (33) 277.	tables for Diending, (33) 577.
desiccated, methods of analyses, (28) 113.	testing, (27) 777; (28) 277; (29) 876, 879; (30) 74, 875; (31) 674; (32) 874; (36) 78, 674.
Devonshire "clotted," (33) 277.	testing-
Devousnire, making, (27) 777.	and grading, treatise, (26) 578.
digestibility, (36) 860. effect on bacterial content of ice cream, (32) 660.	and handling, (32) 774.
examination, (34) 76. expansion of, (32) 471. fat content, determination, (27) 497; (33) 16.	apparatus, notes, (27) 792. Babcock method, (30) 810.
expansion of, (32) 471.	balances, tests, (35) 873. errors in, (26) 371. for fat, (39) 182. law, (28) 473.
fat content, determination, (27) 497; (33) 16.	errors in, (26) 371.
fat content, factors affecting, (26) 599; (29) 879; (33) 383; (37) 576.	10f 18t, (39) 182. 1aw (28) 473
from sheep and buffalo milk, analyses, (27) 575.	
garlic flavor in, removal, (31) 771.	utensils, inspection, (30) 178. tests, variations in, (33) 383; (36) 674, 775; (38)
grading, (27) 311; (32) 175.	tests, variations in, (33) 383; (36) 674, 775; (38) 280.
grading and improvement, (37) 592.	transportation, (30) 74.
grading and labeling, (36) 176. grading in Alberta, (29) 375. handling, (27) 778; (34) 79; (35) 176.	unwhippable, cause and remedy, (28) 473.
handling, (27) 778; (34) 79; (35) 176.	use of preservatives in, (27) 282.
homogenization, (29) 879; (30) 275. homogenization, device for, (27) 74.	viscosity, (30) 179. yellow color in, (33) 175.
homogenization, device for, (27) 74.	
homogenized, for cheese making, (40) 576, 865.	Creameries— accounting systems for, (37) 875.
improvement, (28) 473. inspection, (28) 65.	arrangement of machinery and cooling facil-
judging by score cards, (27) 74.	ities, (27) 284.
law in Michigan, (30) 74.	computor for, (31) 276. construction, (30) 89; (32) 889.
law in New Jersey, (35) 873. law in Pennsylvania, (27) 767.	cooperative, (33) 91.
iaws and regulations in United States, (33) 874.	cooperative—
low-grade, notes, (27) 899.	in Minnesota, (32) 688; (38) 178. in Wisconsin, (28) 895; (32) 893; (38) 293.
market, contests, (36) 774.	in Wisconsin, (28) 895; (32) 893; (38) 293.
low-grade, notes, (27) 899. market, contests, (38) 774. market, of Iowa, (35) 572. marketing in Florida, (39) 282.	organization and management, (29) 674.
marketing in the South, (32) 3//.	Danish, skimming and churning in. (28) 776.
metallic flavor in. (35) 276.	organizing, (28) 775. Danish, skimming and churning in, (28) 776. expense items in, (29) 375.
methods of analysis, (31) 114; (34) 713. neutralizing, (35) 277; (38) 281; (39) 384, 679. of tartar, crystallization in grapes, (30) 803.	for southern farmers, (32) 577. Government operation, (40) 688.
neuranzing, (55) 277; (55) 251; (59) 384, 579.	hot water for (28) 802
of tartar, deposition by wine. (30) 612.	hot water for, (28) 892. in Ireland, (27) 375.
of tartar, deposition by wine, (30) 612. pasteurization, (27) 179; (28) 278; (30) 575; (35) 99; (37) 476; (39) 78; (40) 79, 81.	Minnesota, (37) 777.
99; (37) 476; (39) 78; (40) 79, 81.	Norway, (29) 897.

Creameries—Continued.	Creatinin—Continued.

Cucumbers—Continued. culture— and preservation, (30) 640. experiments, (37) 742.	Cultivators— mechanical, tests, (31) 188, 487; (35) 87, 890; (36) 189. rotating, notes, (31) 188.
in greenhouse, (37) 41; (40) 147. fertilizer experiments, (36) 839; (37) 41, 742; (39) 745, 843.	tests, (29) 186. Culture— media—see also Nutrient media.
fungus disease affecting, (26) 244. Fusarium disease affecting, (26) 54. greenhouse, red spider on, (39) 65. growth in—	amino acid content, (40) 201. bacteriologic, (39) 9, 583, 668, 888. bouillon, new, (40) 180. bouillon, studies, (40) 310.
partially sterilized soils, (26) 815. sterilized soils, (31) 336. varying light and soil moisture conditions,	for counting colon-aerogenes organisms, (40) 381. counting soil bacteria, (32) 625.
(30) 142. insects affecting, (31) 248. lightning injury, (40) 645. liming experiments, (39) 745.	pathogenic anaerobes, (40) 677. soil organisms, (40) 739. streptococci, (40) 180, 881. vaccine organisms, (40) 677.
mulching v. clean culture, (33) 534. pickling (28) 616. preservation, (35) 367. seed treatment, (40) 450.	water examination, (38) 591. from blood, (37) 220. from sheep or ox serum, (36) 575. from whole blood, (36) 676.
spraying, (39) 345. water requirement, (32) 127. Cucumis— prophetarum, analyses and digestibility, (27)	hydrogen-ion concentration in, (34) 136. improvement, (38) 710. physiological balance in, (36) 328. pipette for tubing, (40) 12.
871; (32) 167. sativus, root system of, (28) 228. Cucurbit—	preparation, (40) 408. reactions, notes, (40) 805. relation to production of hemolysin, (26) 481.
anthracnose, studies, (35) 652; (40) 250. bacterial wilt, notes, (37) 150. bacterial wilt, studies, (34) 244; (35) 546. diseases, notes, (39) 353.	synthetic, studies, (36) 524. tests, (38) 634. methods for anaerobic organisms, (39) 887.
mosaic diseases, (39) "" wilt, studies, (27) 45. Cucurbita— maxima, root system of, (28) 228.	solutions, nerating, (36) 524. solutions, studies, (38) 730. studies, bacteriologic, methods, (39) 9, 828. volumeter, annerobic, (39) 713.
melanosperma, carotinoid content, (31) 803. Cucurbitacea acanthosicyos horrida, description, (29) 60. Cucurbitaria pithyophila, studies, (37) 353.	Cultures— bacterial, system of notes, (40) 881. dried, preparation, (31) 773. mass, on solid media, (40) 805.
Cucurbits— forcing with radium, (28) 825. parthenogenesis in, (38) 331. Culex—see also Mosquitoes.	Culvert— pipe, corrugated, tests, (35) 580. slabs, reinforced concrete, tests, (33) 487.
breeding in rice fields, (40) 857. brehmei n.sp., description, (36) 359. pipiens—	Culverts— concrete— plans, (38) 189. specifications, (32) 485, 686, 894.
as affected by Roentgen rays, (28) 57. as host of Crithidia fascieniata, (30) 757. control in England, (28) 860. destruction of larvae, (26) 559. migration, (37) 664.	v. cast-iron, for roads, (37) 885. construction, (26) 890; (27) 190, 292; (33) 291, 588, 688, 782. construction and maintenance, (26) 385.
notes, (28) 355. outbreak in Connecticut, (31) 455. relation to temperature, (33) 860.	corrugated metal, specifications, (27) 190. corrugated metal, tests, (37) 288. designing, (28) 684. for country roads, (28) 485.
quinquefasciatus (fatigans)— as dengue fever carrier, (39) 263. notes, (35) 258. range in United States, (30) 657.	inspection and maintenance, (36) 386. plans and specifications, (28) 289. standards for, (31) 890.
studies, (29) 252. spp., control, (27) 559. spp. in Bahamas, (34) 553. spp., notes, (28) 158, 254.	Cumbu, culture experiments, (31) 733; (38) 433. Cumulus—clouds, violent uprushes in, (29) 120. over a fire, (34) 413.
spp., transmission of pollomyelitis by, (28) 753. Culicelsa vigilax, notes, (35) 258. Culicidae— <i>see also</i> Mosquitoes. of Saskatchewan, (39) 661.	Cunlia mariana, ice fringes on, (32) 221. Cunninghamella bertholletiae n.sp., studies, (28) 646. Cuorin—
Culicoides— kiefferi n.sp., notes, (30) 551. sp., destructive to mosquitoes, (26) 559.	in horse kindeys, (30) 477. ox heart, fatty acids of, (31) 608. Cuprammonium washes, studies, (38) 255. Cuprossus—
Cultivation— animal v. motor power, (37) 591. effect on— composition of soils, (29) 416, 417.	lawsoniana, damaged by squirrels, (26) 552. macrocarpa, structure of wood, (28) 843. Cupri sulphas, nature and usc, (26) 580. Cuproform, use against grain smuts, (27) 445.
swamp soils, (30) 120. water economy of light sandy soil, (33) 287. factors in, (31) 215. handbook, (29) 329.	(34) 611. Curb, concrete caisson, for shallow wells, (29) 484; (32) 586.
mechanical— in Europe, (32) 485; (37) 490. in France, (31) 187; (38) 790. in Germany, treatise, (30) 191.	Curcin, toxicity, (31) 775. Curculionidae————————————————————————————————————
treatise, (30) 191. motor, handbook, (31) 488. ridge method, treatise, (28) 632.	new neotropical, (37) 765. of British India, (37) 765. of North America, (27) 259. Curd—see also Obesse making.
Cultivator— motor, description, (27) 293; (28) 84. springshovel, description, (27) 293	Ourd—see also Oneese making. Don, bacterial content, (26) 779. Lyife for cheese (31) 875

Curlew-	Currants-Continued.
bug, control, (40) 655. bug, investigations, (27) 162.	sprayed, arsenic on, (38) 55. spraying experiments, (27) 439.
subspecies, notes, (39) 654.	transplanting experiments, (35) 37.
Currant— anthracnose, investigations, (33) 347.	varieties, (28) 542; (32) 538; (37) 243.
anthracnose, notes and treatment, (28) 748.	varieties for New York, (26) 239.
aphis—	transplanting experiments, (35) 37. varieties, (28) 542; (32) 538; (37) 243. varieties, classification, (39) 541. varieties for New York, (26) 239. variety tests, (32) 141; (40) 340. viid. aphide. Grains (27) 759
alternate hosts, (39) 464. migratory habits, (37) 562.	wild, aphids affecting, (27) 758. Current meter—
northern, notes, (30) 53.	gaging stations, equipment for, (34) 84.
migratory habits, (37) 562. morthern, notes, (30) 53. notes, (27) 758; (37) 358. studies, (31) 157.	measurements, accuracy of, (30) 885. Current meters—
Dorer in Lasmania, (36) 201.	cup, tests, (31) 288. rating, (30) 386; (31) 587, 888.
borer, notes, (40) 753. cane necrosis, treatment, (28) 748.	rating, (30) 386; (31) 587, 888. use in irrigation canals, (34) 281.
clearwing moth, see Currant borer. dieback, notes, (37) 251, diseases, notes, (30) 147; (39) 652.	Curriculum, change of stress in, (36) 393.
dieback, notes, (37) 251,	Currying machines for horses and cattle, (27) 90. Cuscuta—see also Dodder.
diseases, studies, (32) 441.	americana, notes, (37) 452.
felt rust, notes and treatment, (29) 249. fly, yellow, life history and habits, (28) 255.	destruction, (31) 835.
fruit fly—	epilinum, vitality of seed, (27) 841. host relationships, (35) 460.
dark, in California, (37) 566.	seeds, determination, (33) 533.
life histroy and habits, (28) 255, notes, (35) 466; (40) 56, 169.	sp., notes, (28) 52; (37) 755. spp., destruction by chemicals, (27) 28.
notes, (35) 466; (40) 56, 169. remedies, (31) 757.	spp., germination, (27) 342; (34) 155.
studies, (38) 466. fruit weevil—	spp. investigations, (28) 545. trifolii, destruction by calcium cyanamid, (26)
attacking blueberries, (34) 852.	44.
notes, (31) 351. gooseberry hybrid, description, (31) 236.	Custard apples—
industry in Ontario, (31) 142.	as stock for cherimoya and atemoya, (32) 143. insects affecting. (27) 453.
juice, composition as affected by fertilizers, (29)	insects affecting, (27) 453. of the Aztecs, (26) 743.
juice, preparation, (33) 316.	propagation, (27) 587.
leaf—	Cuterebra— cuniculi, reproductive and host habits, (34) 358.
diseases, treatment, (34) 747. fall, notes, (30) 246.	fontinella, egg and ovipositor of, (35) 756.
spot, notes, (26) 446, 850; (40) 154.	n.spp., descriptions, (40) 458.
spot, notes, (26) 446, 850; (40) 154. spot, studies, (38) 546. maggot, notes, (29) 158. mildew, notes, (34) 648.	Cut-over land— clearing, (26) 787; (39) 687; (40) 788.
mildew, notes, (34) 648.	fertility indication, (39) 115.
01dium notes (30) 448	in Adirondacks, (40) 841. south Mississippi, (28) 215.
pollen, germination, (35) 731. pollen, viability, (32) 534. root rot, studies, (38) 650. rust, notes, (30) 448; (32) 241. rust, treatment, (31) 346. son as offsetad by Bordeaux mixture, (30) 647.	the South, (38) 391. the South, live stock on, (39) 268.
pollen, viability, (32) 534.	the South, live stock on, (39) 268. pasture and forage crops for, (39) 230.
rust, notes, (30) 448; (32) 241.	re-afforesting, (40) 248.
rust, treatment, (31) 346. sap as affected by Bordeaux mixture, (30) 647.	re-afforesting, (40) 248. utilization, (40) 91. Cutthroat grass in Florida, (40) 137.
seeds, oil and press cake from, (40) 803.	Cuttings—
Septoria leaf spot, investigations, (33) 347.	hardwood, propagation by, (40) 340.
twig borer or budworm, notes, (36) 754. wine, preparation, (27) 412.	stimulation of root growth, (39) 826.
wine, preparation, (27) 412. worm, imported, notes, (33) 659. worm, notes, (37) 599.	Cutworm— army—
Currants—	control, (33) 654.
acidity, (32) 110; (37) 714.	in southern Alberta, (36) 456.
Alpine, as a hedge plant, (37) 241. black—	life history, (35) 854. notes, (35) 758, 853; (37) 255.
abnormal blossoms, (38) 552.	baits, tests, (34) 358; (39) 361. black—
nematodes affecting, (37) 843, pine rust of, (29) 547.	biology, (40) 167.
pine rust of, (29) 547. reversion, (38) 650; (39) 646. breeding experiments, (32) 535; (33) 637; (39)	biology, (40) 167. notes, (27) 53, 659; (28) 455; (34) 250. remedies, (36) 254.
breeding experiments, (32) 535; (33) 637; (39) 346.	
culture, (31) 142, 441; (34) 42.	notes, tap to, (u2) 651. variegated, notes, (32) 651. variegated, notes, (28) 452; (27) 659; (29) 252; (32) 651; (33) 252, 352; (35) 253. variegated, remedies, (36) 56. variegated, trap for, (31) 851.
culture— and marketing, (38) 844.	(32) 651: (33) 252. 352: (35) 253.
experiments, (28) 436; (32) 540.	variegated, remedies, (36) 56.
in California, (38) 346.	
in western Washington, (38) 298. destruction by Cronartium ribicola, (29) 649.	Cutworms— control, (27) 136; (32) 246; (39) 158.
dried, analyses, (30) 861.	control in greenhouses, (38) 762.
drying, (37) 114, 509. fertilizer experiments, (36) 121; (38) 540.	fungus parasite of, (36) 757. in Hawaii, (34) 59.
for home and commercial planting, (33) 537.	in Louisiana, (40) 58.
insects affecting, (28) 352; (38) 843. Lübeck, partial sterility in, (31) 225.	injurious to— alfalfa, (29) 158; (36) 53.
new, descriptions, (29) 838; (31) 337.	grain in western Canada, (31) 352.
of Germany, (33) 838. overwintering of pine rust on, (31) 54.	potatoes, (37) 157. strawberries, (32) 556.
preservation by freezing, (39) 344.	tohogo (90) 555. (90) 758. (24) 452
red, as affected by tarring roads, (26) 432. red, gooseberry mildew affecting, (26) 344.	notes. (27) 659, 755; (28) 351, 653, 654, 752, 854;
red, history and development, (37) 833.	(29) 252, 652, 653, 759; (30) 140, 454, 753; (31)
relation to white pine blister rust, (30) 152. resistance to pine blister rust, (38) 151.	life history and remedies, (38) 54. notes, (27) 659, 755; (28) 351, 653, 654, 752, 854; (29) 252, 652, 653, 759; (30) 140, 454, 753; (31) 155, 843; (32) 349, 448, 753; (33) 652, 746; (34) 251, 360; (35) 360, 465; (37) 195.
spray schedules, (39) 39.	studies, (26) 453.

Cyamopsis—	Cydonia
psoralioides, analyses, (38) 572.	japonica, inoculation experiments with brown
psoralioides, notes, (26) 362.	rot fungus. (33) 247.
tetragonoloba, culture in New South Wales,	rot fungus, (33) 247. lusitanica, Monilia affecting, (28) 241.
(26) 835.	veitchii, description, (35) 743.
Cyanamid—	Cylas—
action as affected by iron oxid. (28) 33.	formicarius—see also Sweet potato weevil.
ammonification of, (33) 219.	notes, (28) 158; (34) 65; (37) 256; (38) 467, 564, 864; (40) 259, 260.
as source of nitrogen, (38) 220. decomposition in soil, (40) 724.	564, 864; (40) 259, 260.
decomposition in soil, (40) 724.	preventing introduction, (39) 159.
decomposition, seasonal variation, (32) 514.	studies, (40) 357.
determination, (33) 110. determination in fertilizers, (26) 804.	spp. attacking sweet potatoes, (38) 864.
determination in fertilizers, (26) 804.	Cylichnostomum—
fertilizing value, (27) 724.	mettami n.sp., notes, (29) 889.
for corn. (31) 831.	n.spp., descriptions, (37) 280; (39) 686
handbook, (29) 518.	notes, (40) 586.
in iertilizer mixtures. (33) 624.	spp., anatomy and biology, (28) 887.
industry (31) 323: (36) 124	Cylicostomiasis in equines, (36) 779.
injurious to fish, (29) 821.	Cylindrocladium—
manufacture, (27) 623; (30) 721. manufacture and use, (27) 520; (29) 24.	parvum n.sp., description, (39) 858.
manufacture and use, (27) 520; (29) 24.	scoparium, control, (40) 751.
nitrogen, fertilizing value, (39) 726.	scoparium, studies, (38) 854; (39) 858.
paper on, (29) 517.	Cylindrosporium—
preparation, (38) 711.	dioscoreae n.sp., description, (28) 446.
process, development and status, (33) 424.	juglandis, n.sp., description, (32) 150. mori, studies, (36) 751.
studies, (29) 127.	mori, studies, (36) 751.
use on moor soils, (39) 438.	on Prunus avium, periect stage, (29) 349.
works at Niagara Falls, (32) 622.	on stone fruits, studies, (31) 544.
Cyanid—	padi, description and treatment, (30) 819.
as affected by salt, (26) 206.	padi, notes, (38) 546.
detection in water, (34) 410.	pollacci n.sp., description, (35) 354. pomi as affected by cold, (34) 538.
effect on—	pomi as affected by cold, (34) 538.
locust borer and locust tree, (34) 757.	pomi, notes, (27) 652; (29) 547; (32) 749. sp., notes, (27) 649.
oxidation in arsenical dips, (38) 585.	sp., notes, (27) 049.
plants, (32) 846.	spp., notes, (27) 341.
scale-insect eggs, (32) 245.	spp., studies, (30) 750.
fumigation—	vaccarianum n.sp., notes, (37) 630. yuccae n.sp., description, (37) 550.
effect on bud formation, (34) 143.	Cribadestama anlandana life history (40) 166
of ships, (33) 556.	Cylindrotoma splendens, life history, (40) 169 Cyllene—
gas as cause of fruit pitting, (37) 634. gas, use against insects, (36) 456.	
gas, use against insects, (36) 456.	pieta, see Hickory borer.
Cyanin, studies, (34) 709.	robiniae, notes, (26) 856; (28) 156; (33) 253; (37)
Cyanogen-	566; (38) 459. robiniae, remedies, (34) 757.
determination, (28) 310.	robiniae, studies, (35) 355, 552.
formation in plants, (28) 527.	Cyllophorus rubrosignatus n.sp., description, (33)
in grasses, (33) 665.	159.
Cyanogenesis—	Cymatodera aethiops, notes, (38) 61.
review of investigations, (29) 713.	Cymatophora sulphurea—
under digestive conditions, (30) 682.	parasites of, (31) 752.
	studies, (36) 54.
Cyanophyceae—	Cymbopogon—
as affected by copper sulphate, (39) 27.	citratus, culture, (36) 538.
etudiae (27) 780	martini, economic uses, (35) 807.
distribution in soils, (34) 513. studies, (27) 780. Cyanopterus (Iphiaulax) clypeolus n.g. and n.sp., description, (26) 352.	Cymodusopsis aristoteliae n.sp., description, (30)
description (26) 352	60.
Cyanuric acid—	Cynipidae—
assimilation by plants, (27) 32.	gall-making, of California, (27) 264.
assimilation by plants, (27) 32. distribution in soils, (38) 202.	gall-making, of North America, (33) 857.
identity with "tetracarbonimid," (38) 202.	of North America, (26) 759.
isolation from soils, (37) 612.	Cynipoldea, type species, (38) 63; (40) 862.
Cyathen medullaris, slime disease of, (27) 51.	Cynips calicis, notes, (38) 654.
Cyathula hereroensis, analyses and digestibility,	Cynodon—
(27) 871; (32) 167.	dactylon—
Cybocephalus nigritulus, notes, (28) 754.	analyses, (31) 863.
Cyclamen mite, see Tursonemus pallidus.	analyses and digestibility, (27) 871; (32) 167
Cyclocephala villosa—	as lawn grass, (32) 828.
life history, (38) 863. notes, (29) 252.	for shifting soils, (37) 333; (39) 441.
notes, (29) 252.	notes, (26) 361; (28) 534.
Cycloconium oleaginum—	plecto stachyum—
biology of, (30) 246.	analyses, (36) 334.
description, (27) 850.	studies, (38) 66. undescribed species, (39) 231.
Cyclohexane—	Cynomolgus philippinensis, notes, (28) 180.
effect on soil microorganisms, (31) 27. sterilization of soils by, (32) 816.	Cynomyia cadaverina, hibernation, (38) 262.
Ovelene increases mutual in Illinois (26) 701	Cynomys—
Cyclone insurance, mutual, in Illinois, (36) 791.	
Cycloneda (Neda) sanguinea, notes, (33) 860. Cyclones—	ludovicianus, control, (34) 57. spp., in Colorado, (28) 652.
in perspective, (36) 419.	spp., in Colorado, (25) 552. spp., systematic account, (35) 551.
in United States, (33) 807.	Cyperus—

milk held at low temperature, (31) 373. respiration of plants, (27) 221.	Eosinophils, investigations, (34) 878, 879. Epalpus sp. (?) with intracuticular stage, (33) 157.
saccharin, (26) 257. formation, (30) 111.	Epelis truncataria faxonii, notes, (31) 752; (33) 352. Ephedrus—
formation and regulation by mold fungi, (31)	aestivalis n.sp., description, (34) 363.
730. formation of alkali by. (30) 111.	incompletus, parasitic on rose aphis, (31) 250, nitidus n.sp., description, (38) 165.
formation of alkali by, (30) 111. fungus, studies, (27) 25. handbook, (28) 202.	nitidus n.sp., description, (38) 165. Ephelis oryzae, notes, (38) 547, 848.
hydrolysis of phosphorus compounds by, (29)	Ephestia— cahiritella, notes, (34) 754. cautella, notes, (32) 151; (37) 156.
166. importance in medicine and surgery, (32) 474.	cautella, notes, (32) 151; (37) 156. cautella, studies, (26) 248.
in treatment of diseases. (31) 607.	elutella, notes, (26) 354; (29) 54. kuehniella, see Mediterranean flour moth.
intracellular, studies, (32) 112. method of dialysis, (40) 111.	Ephialtes, notes, (40) 760.
method of purifying, (40) 408. of alfalfa (32) 410.	Ephydra— gracilis, notes, (39) 362.
alfalfa seeds, (28) 710.	macellaria, notes, (38) 363.
animal tissues, (39) 608. apples, (34) 201: (39) 310.	Epiblema tedella, notes, (34) 855. Epicampes macroura as a paper-making material,
apples, (34) 201; (39) 310. Aspergillus oryzae, (32) 710.	(34) 318.
Aspergillus terricola, (33) 410. Botrytis cinerea cultures, (39) 247.	Epicauta—see also Blister beetles. adspersa, cantharidin content, (30) 357.
bread making, (26) 358. cacao, (35) 414.	atomaria, notes, (40) 170. spp., injurious to potatoes, (37) 157
eggs, studies, (28) 64.	spp., notes, (28) 654.
Fucus vesiculosus, (30) 728. germinating red gram, (38) 9.	Epichloe typhina— notes, (30) 746.
large intestine, (36) 366.	on Bromus erectus, (40) 156.
leaves of Salix caprea, (31) 310. Linaceae, (28) 502, 503, (31) 610.	Epicoccum— purpurascens, fixation of nitrogen by, (27) 255.
mammary gland and milk, (32) 411.	sp. on sweet potato, (39) 854; (40) 347. Epididymo-vaginalitis, infectious, in horses, (27)
marine algae, (35) 25. milk, (26) 313.	888.
milk and butter, (38) 479.	Epidinocarsis pseudococci n.sp., description, (34) 456.
milk, filtering, (39) 713. normal serum, (39) 608.	Epidote, solubility of lime in, (40) 812.
pancreatic juice, coagulation, (38) 710. pig ovaries, (27) 670.	Epilachna— borealis, reflex "bleeding", (36) 58.
tobacco plant, (31) 204.	corrupta, notes, (28) 853; (29) 453. corrupta, studies, (37) 465.
washed zymin and dried yeast, (30) 504. yeast, proteoglastic, (39) 607.	corrupta, studies, (37) 465. dregei, notes, (36) 654.
oxidase, notes, (34) 711.	spp., injurious to potatoes, (30) 255.
oxidizing, toxicity of, (28) 443.	vigentioctopunctata, notes, (29) 453. Epilepsy in guinea pigs, (35) 564.
oxidizing, toxicity of, (28) 443. peptid-splitting, in human milk, (26) 803. plant, studies, (32) 523; (34) 428, 731; (35) 334.	Epilobium— angustifolium, textile fibers from, (32) 509.
precipitation by aluminum hydroxid, (30) 504. production and activity of, (34) 32.	factors affecting development, (26) 728.
protective, appearance after injection of foreign	hirsutum, fiber from, (39) 510. hirsutum, germination in light, (31) 323.
substratum, (32) 112. protective, studies, (31) 378; (33) 385.	hybrids of. (35) 818.
proteolytic—	Epimechus spp., notes, (30) 357. Epimecis wiltii, parasitic on spiders, (31) 355.
action and regeneration, (30) 409. activity, (27) 878.	Epimys rattus, history, (35) 656. Epinephrin in fetal pituitary and suprarenal glands,
activity in flour, (35) 265.	(34) 675.
activity in flour, (35) 265. as affected by phosphates, (29) 309. as affected by salt and cold storage, (29) 268. detection, (27) 803. distribution is saimed and reports he king.	Epinotia— fesciolana, studies, (34) 852.
distribution in animal and vegetable king-	fasciolana, studies, (34) 852. nanana, notes, (34) 855.
doms. (31) 377.	piceafoliana, notes, (29) 256. Epiphanin reaction—
in grapé must, (27) 803. of blood, (37) 478.	notes, (26) 579; (29) 881, 882. studies, (28) 375.
plant, inhibitors, (37) 204. textbook, (38) 611.	Epiphytes—
textbook, (38) 611. regeneration, (28) 408.	extreme atmospheric, nutrition, (35) 431. osmotic pressure of, (32) 221.
relation to citrus diseases, (29) 248. relation to manganese, (31) 220.	Epirrita dilutata, notes, (35) 756. Epitetrastichus lecanii n.sp., description, (37) 59.
respiratory, of Sauromatum venosum, (28) 528. review of investigations, (30) 11; (39) 10.	Epithelioma, contagious—
rôle in—	immunization, (30) 785. in chickens. (32) 677.
blood reactions by rigin, (31) 773. denitrification, (32) 112.	in fowls, (30) 884; (34) 189; (35) 885; (37) 78;
immimity, (40) 579.	in chickens. (32) 677. in fowls. (30) 884; (34) 189; (35) 885; (37) 78; (39) 184, 687, 791. in quail, (37) 83.
silage formentation, (36) 802. synthesis of fats by, (26) 307; (27) 108. synthetic action, (31) 608.	virus of. (31) 88. Epitheliosis infectiosa avium, studies. (35) 283.
synthetic action, (31) 608. textbook, (32) 662.	Epithelium, occurrence of fat in. (26) 366.
use in carbohydrate analysis, (35) 206, 315.	Epitrastichus ibseni n.sp., description, (37) 59.
β-Enzyms, distribution in plants, (28) 503. Eocronartium muscicola, studies, (40) 452.	Epitrix— cucumeris, see Potato flea-beetle.
Eomymar n.g. and n.spp., descriptions (27) 554.	fuscula remedies, (34) 361. nigrozenea, notos, (37) 765.
effect on animals, (28) 880.	parvula, see Tobacco flea-beetle.
feeding value, (27) 378. toxicity toward plants, (28) 740.	sp. on castor bean, (40) 453. spp. injurious to horse-nettle, (35) 657.

Epitrix—Continued.	Eriophyes—Continued.
spp. injurious to tobacco, (36) 355; (37) 256.	gossypii, notes, (30) 356.
subscrinita notes, (37) 157. Epiurus indigator, notes, (28) 755.	gossypii, occurrence in Barbados, (27) 60.
Epizootics and their control during war, (38) 287.	malifoliae, notes, (37) 570. n.sp., notes, (36) 261.
Epochra canadensis, see Currant fruit-fly.	n. spp., descriptions, (30) 362.
Eprhopalotus, new genus, (39) 468.	oleivorus, see Citrus rust mite.
Epyris extraneus n.sp., notes, (38) 557.	pruni, remedies, (40) 459.
Equidae— digestion experiments, (31) 769; (32) 262.	pyri, see Pear-leaf blister mite.
teeth, studies, (27) 674.	ribis, life history, (30) 399.
Equilibria in solutions of salts, (39) 203, 204.	quadrisetus, notes, (34) 450. nbis, life history, (30) 399. ribis, notes, (31) 853, 854.
Equisetum—	Sp., Hotes, (31) 152.
arvense, poisoning of horses by (29) 281.	sp. on apples, apricots, and plums, (32) 551.
sylvaticum, eradication, (27) 733. Equitation, treatise, (28) 269.	sp. on poplar, (40) 359. spp., notes, (32) 651.
Equus—	triradiatus on willows, (33) 56.
przewalskii—	vitis, remedies, (26) 561.
hybrids, fertility of, (26) 163.	Eriopus floridensis, see Callopistria floridensis.
notes, (27) 471. spp., hybrid, notes, (26) 269; (28) 68.	Eriosoma—see also Schizoneura.
Eragrostis—	crataegi and E. lanigera, synonymy, (39) 258. lanigerum, see Apple aphis, woolly.
abyssinica—	pyri, identity, (34) 854.
analyses (28) 738; (32) 465.	DVricola, n.sp., description (35) 463
culture in Porto Rico. (29) 631.	pyricola, studies, (37) 661; (38) 560.
notes, (27) 32, 637.	querci, identity, (36) 551. spp., alternate host habits, (39) 464.
major, analyses, (30) 565. spp., analyses, (36) 334.	Spp., atternate nost habits, (35) 404.
spp., analyses and digestibility, (27) 871; (32)	spp., comparison, (35) 464. ulmi, notes, (27) 758; (29) 654.
	uimi, studies, (38) 464.
spp., notes, (26) 361.	Eriosphaeria sacchari, notes, (40) 157.
spp., studies, (38) 66. Erannis tiliaria, see Limes, winter moth.	Erioxylon, glands of, (39) 431. Eristalis—
Hire neans, citilitie experiments, (20) XXII	aeneus, life history, (29) 456.
Erebus odora, notes, (27) 756. Eremaeus modestus, notes, (28) 457. Eremascus fertilis, notes, (28) 562.	sp., relation to intestinal myiasis, (28) 780.
Eremaeus modestus, notes, (28) 457.	Ermine moths, small, notes, (32) 754.
Eremnus fulleri n.sp., description, (33) 159.	Erodium—
Eremocitrus, new genus, description, (31) 237.	bacterial disease of, (32) 53. cicutarium, seeding on ranges, (30) 35.
Erepsin-	cygnorum, analyses, (27) 469.
effect on catalase solutions, (33) 311.	cygnorum, analyses, (27) 469. Erotylidae, catalogue, (26) 560.
protein cleavage by, (36) 108. Erepton, effect on dogs, (28) 568.	Eruca sativa, oil content, (31) 234. Ervum lens, fertilizing value, (26) 233. Erynnia vibrissata, notes, (31) 251.
Erethistes lateralis—	Ervum iens, iertilizing value, (26) 233.
catherinensis, notes, (33) 658.	Erysipelas—
notes, (32) 352.	anaphylatoxin, notes, (28) 778.
Ergates faber, notes, (30) 249.	bacilli, culture differences, (39) 287.
Ergograph for lower extremities, description, (30)	diagnosis, (30) 180.
563. Ergometer—	immunization, (29) 176. in hogs, see Hog erysipelas.
bicycle—	in pigeons and ducks, (39) 287.
calorimetric calibration, (33) 757.	Erysiphaceae—
description. (30) 767.	characteristics, (30) 537.
with electric brake (27) 768.	formation of conidiophores, (27) 351.
brake type, description, (31) 764. Ergot—see also specific host plants.	Erysiphe— communis—
dissemination by insects, (27) 47.	notes, (29) 243.
notes, (32) 337, 441.	spread from wild to cultivated plants, (26)
of Equidae. (34) 568.	243.
of oats, (27) 149. of wild rice, studies. (34) 444.	graminis— 200 846: (28) 140: (34) 644, 845; (36)
toxicity toward cattle, (26) 586; (28) 80.	notes, (26) 646; (28) 149; (34) 644, 845; (36) 846; (38) 48.
Eri silk, notes, (27) 861.	overwintering, (33) 647.
Erianthus cay-cong, description and use. (31) 332.	studies, (33) 146, 847; (35) 651.
Ericaceae, endotrophic mycorrhiza, (39) 26. Ericads, evergreen, xerophily of, (31) 728.	susceptibility of wheat to, (29) 844. treatment, (28) 346.
Ericerus pela, studies, (35) 256.	nolveoni—
Erichlos punctata, analyses, (27) 469.	notes, (28) 52; (29) 450, 650; (30) 351; (33) 545
Erigeron annus and its control, (40) 738.	(34) 52.
Eriocampa adumbrata, notes, (31) 848.	treatment, (32) 545. sp. on tomato, (39) 651. spp., notes, (37) 453, 551, 657.
Eriocampoides—	Sp. on tomato, (37) 453 551 657
amygdalina, studies, (26) 152. cerasi, remedies, (28) 659.	tortilis, notes, (37) 550.
ilmacina, see Pear Sing.	Erythraeus—
Eriocera spp., biological and systematic studies,	arvensis, notes, (27) 561.
(32) 153.	sp., notes, (28) 755.
